

Early Career
Award
for scientific
accomplishment

Daniel W. Bardayan, Physics

For innovative precision spectroscopy measurements that clarify the production of elements and radioisotopes in exploding stars

Rongying Jin, Condensed Matter Sciences

For sustained excellence in basic research on crystal growth and the basic physical properties of layered ruthenates, exotic pyrochlores, and high-technetium superconductors

Chris A. Tulk, SNS Experimental Facilities

For outstanding early-career performance, in particular, for significant contributions to the understanding of the structural transitions in the amorphous ices
