HIGH SEAS SALMONID CODED-WIRE TAG RECOVERY DATA, 2005

ABSTRACT

Information on high seas recoveries of coded-wire tagged (CWT) salmonids has been reported annually to the International North Pacific Fisheries Commission (1981-1992) and to the North Pacific Anadromous Fish Commission (NPAFC, 1993-present). The Regional Mark Processing Center, Pacific States Marine Fisheries Commission (PSMFC), incorporates the CWT recovery data reported in this document into their coastwide, on-line CWT recovery data set (Regional Mark Information System (RMIS, <http://www.rmis.org/>)). This document lists recovery data for 478 CWT salmonids that will be reported to PSMFC/RMIS for the first time. Reported recoveries are from 2004-2005 U.S. groundfish (trawl) fisheries in the eastern Bering Sea and Gulf of Alaska portions of the U.S. Exclusive Economic Zone (83 recoveries, including 82 chinook and 1 chum salmon), from 1992-2003 Canadian research vessel operations in the eastern North Pacific and Gulf of Alaska (386 recoveries, including 1 steelhead trout, 133 coho salmon, and 252 chinook salmon), from 2005 Japanese research vessel operations in the central North Pacific Ocean (1 steelhead), and from 2004 Russian research vessel operations in the western North Pacific Ocean (8 steelhead). All Canadian research vessel recoveries of CWT juvenile coho (128 fish) and chinook salmon (250 fish) listed in this document were reported to NPAFC in 2004 using a different data format (NPAFC Doc. 823). One chum salmon recovered by the U.S. groundfish fishery corroborates previous data showing the extension of the northern range of British Columbia (Georgia Strait) hatchery fall chum salmon into the southeastern Bering Sea in summer. An October recovery of a Canadian Yukon hatchery chinook salmon in the southeastern Bering Sea-Aleutian Islands area is a southern extension of their known ocean range. A recovery in the southeastern Bering Sea in March is a northwestern extension of the known ocean range of a Southeast Alaska hatchery chinook salmon. The Canadian research vessel recoveries corroborate data from previous tagging experiments, and provide substantial new information on the distribution and migration patterns of U.S. and Canadian juvenile chinook and coho salmon stocks. The recoveries of eight CWT North American (Idaho) hatchery steelhead in western North Pacific waters off the southern Kurile Islands are significant westward extensions of the known ocean range of North American steelhead trout.

INTRODUCTION

The North Pacific Anadromous Fish Commission (NPAFC) coordinates the examination of high seas commercial and research catches for Pacific salmon and steelhead trout (*Oncorhynchus* spp.) that might contain a coded-wire tag (CWT). Recoveries of coded-wire tagged salmonids in the North Pacific Ocean and Bering Sea have been reported annually to the International North Pacific Fisheries Commission (Dahlberg 1981-1982; Wertheimer and Dahlberg 1983-1984; Dahlberg and Fowler 1985; Dahlberg et al. 1986-1992; Margolis 1985; Margolis et al. 1989; McKinnell et al. 1991) and to the North Pacific Anadromous Fish Commission (Dahlberg et al. 1993-97; Myers et al. 1998-2004; Morris 2004). The Regional Mark Processing Center, Pacific States Marine Fisheries Commission (PSMFC), incorporates these data into their coastwide, on-line CWT recovery data set (Regional Mark Information System (RMIS, <http://www.rmis.org/index.html>)). After 2002, recoveries of CWT salmon caught by the Pacific hake (*Merluccius productus*) fishery along the U.S. West Coast were no longer reported to the NPAFC. In this document, we list previously unreported data for CWT recoveries in the salmon bycatch of U.S. groundfish (trawl) fisheries for walleye pollock (*Theragra chalcogramma*) in the eastern Bering Sea and Gulf of Alaska portions of the U.S. Exclusive Economic Zone and from salmon research vessel operations in the Bering Sea and North Pacific Ocean, as well as new recoveries during salmon research vessel operations in the North Pacific Ocean and Bering Sea. New recoveries of CWT salmonids are compared to previous recoveries of high seas tags (cwt and external tags) and thermal (otolith) marks reported to the International North Pacific Fisheries Commission (INPFC, 1956-2002) and to NPAFC (2003-present), and significant new information on the known ocean ranges of regional stocks of salmon is discussed.

RESULTS AND DISCUSSION

This document lists recovery data for 478 CWT salmonids that will be reported to PSMFC/RMIS database for the first time. Eighty-three CWT salmon (82 chinook and 1 chum salmon) were recovered from U.S. groundfish (trawl) fisheries in the eastern Bering Sea and Gulf of Alaska portions of the U.S. Exclusive Economic Zone in 2004 and 2005 (Table 1). Salmon research vessels recovered 397 CWT salmonids (Table 2), including 386 fish from 1992-2003 Canadian surveys in the North Pacific Ocean and Gulf of Alaska (1 steelhead trout, 133 coho salmon, and 252 chinook salmon), 1 steelhead trout from a 2005 Japanese salmon survey in the central North Pacific Ocean, and eight steelhead trout from 2004 Russian surveys in the western North Pacific Ocean. All Canadian research vessel recoveries of CWT juvenile coho (128 fish) and chinook salmon (250 fish) listed in this document were also reported to NPAFC in 2004 using a different data format (Morris et al. 2004).

The geographic locations of new recoveries of CWT salmonids are summarized by province, state, or continent of origin in Figures 1-13. One chum salmon recovered by the U.S. groundfish fishery corroborates previous data showing the extension of the northern range of British Columbia (Georgia Strait) hatchery fall chum salmon into the southeastern Bering Sea in summer (Fig. 1; Table 1, fish no. 1). An October recovery of a Canadian Yukon hatchery chinook salmon in the southeastern Bering Sea-Aleutian Islands area is a southern extension of their known ocean range (Fig. 2; Table 1, fish. no. 3). A recovery in the southeastern Bering Sea

in March is a northwestern extension of the known ocean range of a Southeast Alaska hatchery chinook salmon (Fig. 4; Table 1, fish no. 16). The Canadian research vessel recoveries corroborate data from previous tagging experiments, and provide substantial new information on the distribution and migration patterns of U.S. and Canadian juvenile chinook and coho salmon stocks (Figs. 4-12; Table 2; Morris et al. 2004). The recoveries of eight CWT North American (Idaho) hatchery steelhead in western North Pacific waters off the southern Kurile Islands are significant westward extensions of the known ocean range of North American steelhead trout (Fig. 13; Table 2, fish nos. 1-8).

ACKNOWLEDGMENTS

Fishermen, processors, observers, and scientists who participated in the 2005 high-seas CWT recovery program are gratefully acknowledged. The North Pacific Groundfish Observer Program, Alaska Fisheries Science Center (AFSC), National Marine Fisheries Service (NMFS), provided snout samples from salmonids lacking the adipose fin and recovery data collected by observers from the U.S. groundfish fishery. Jerry Berger, AFSC, provided data on catch locations, when observer data accompanying the samples were incomplete or erroneous. Eric Reiter, Auke Bay Laboratory (ABL), AFSC, NMFS, dissected salmon snouts, read CWTs, and coded CWT recovery data. The INPFC/NPAFC high seas tag, CWT tag, and otolith mark recovery databases used in this report are archived at the School of Aquatic and Fishery Sciences, University of Washington, Seattle. ABL provided funding for compilation, reporting, and archiving of INPFC/NPAFC high seas tag and CWT release and recovery data (NOAA Contract No. 50ABNF-1-0002).

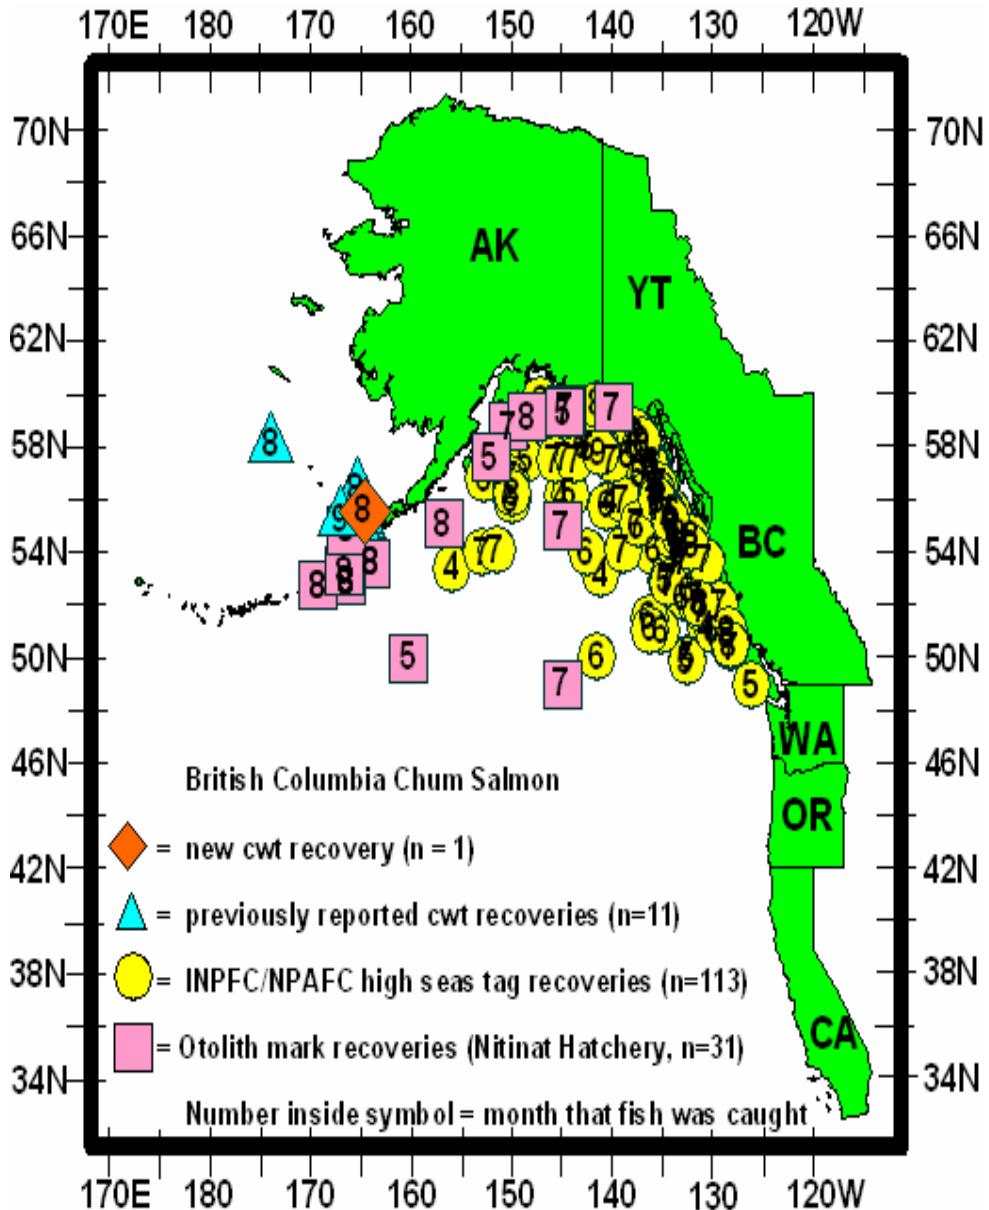

Fig. 1. The ocean distribution of British Columbia chum salmon, as shown by high seas tag and otolith mark recoveries, 1956-2005. The geographic location of one new recovery of a coded-wire tagged fish (Table 1, fish no.1) is indicated in the figure by a closed (orange) diamond. Recoveries of otolith-marked immature and maturing British Columbia hatchery chum salmon (Nitinat Hatchery, Vancouver Island) in 1997 and 1998 were reported by Farley and Munk (1998), Carlson et al. (2000), and Urawa et al. (2000). An additional 38 recoveries of otolith-marked British Columbia chum salmon in the 1994-1996 Bering Sea walleye pollock (*Theragra chalcogramma*) trawl fishery, reported by Ignell et al. (1997), are not shown. Processing plant recoveries of CWT fish are not shown. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

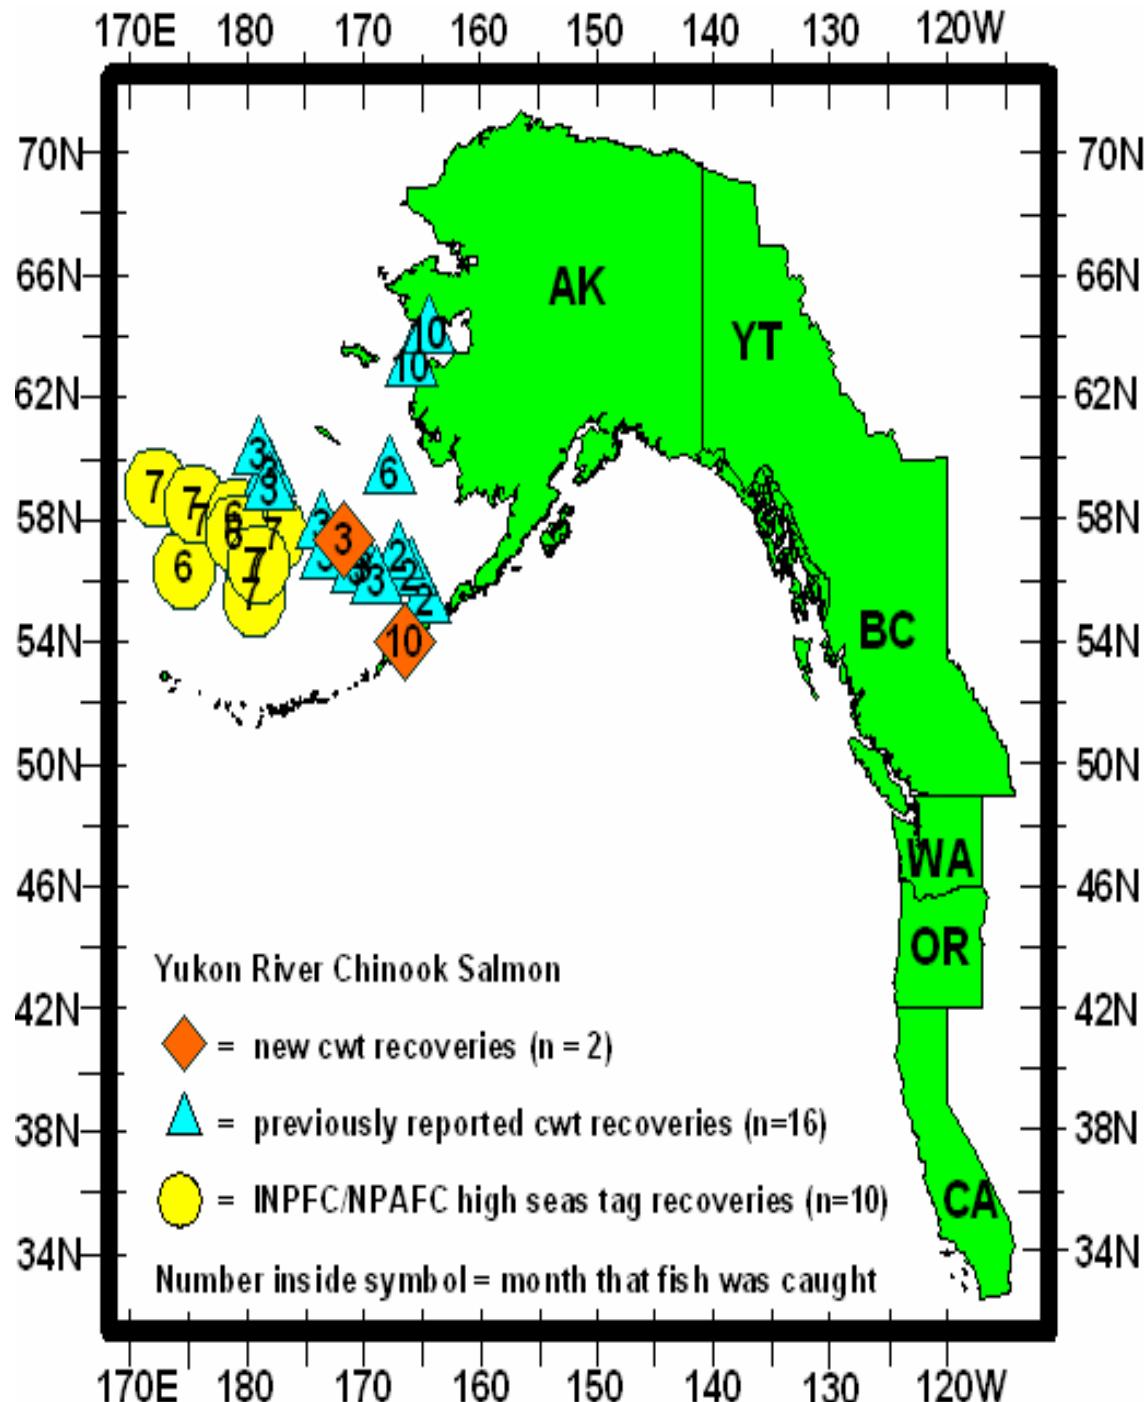

Fig. 2. The ocean distribution of Yukon River chinook salmon, as shown by high seas tag recoveries, 1956-2005. The geographic location of two new recoveries of cwt fish (Table 1, fish nos. 2 and 3) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

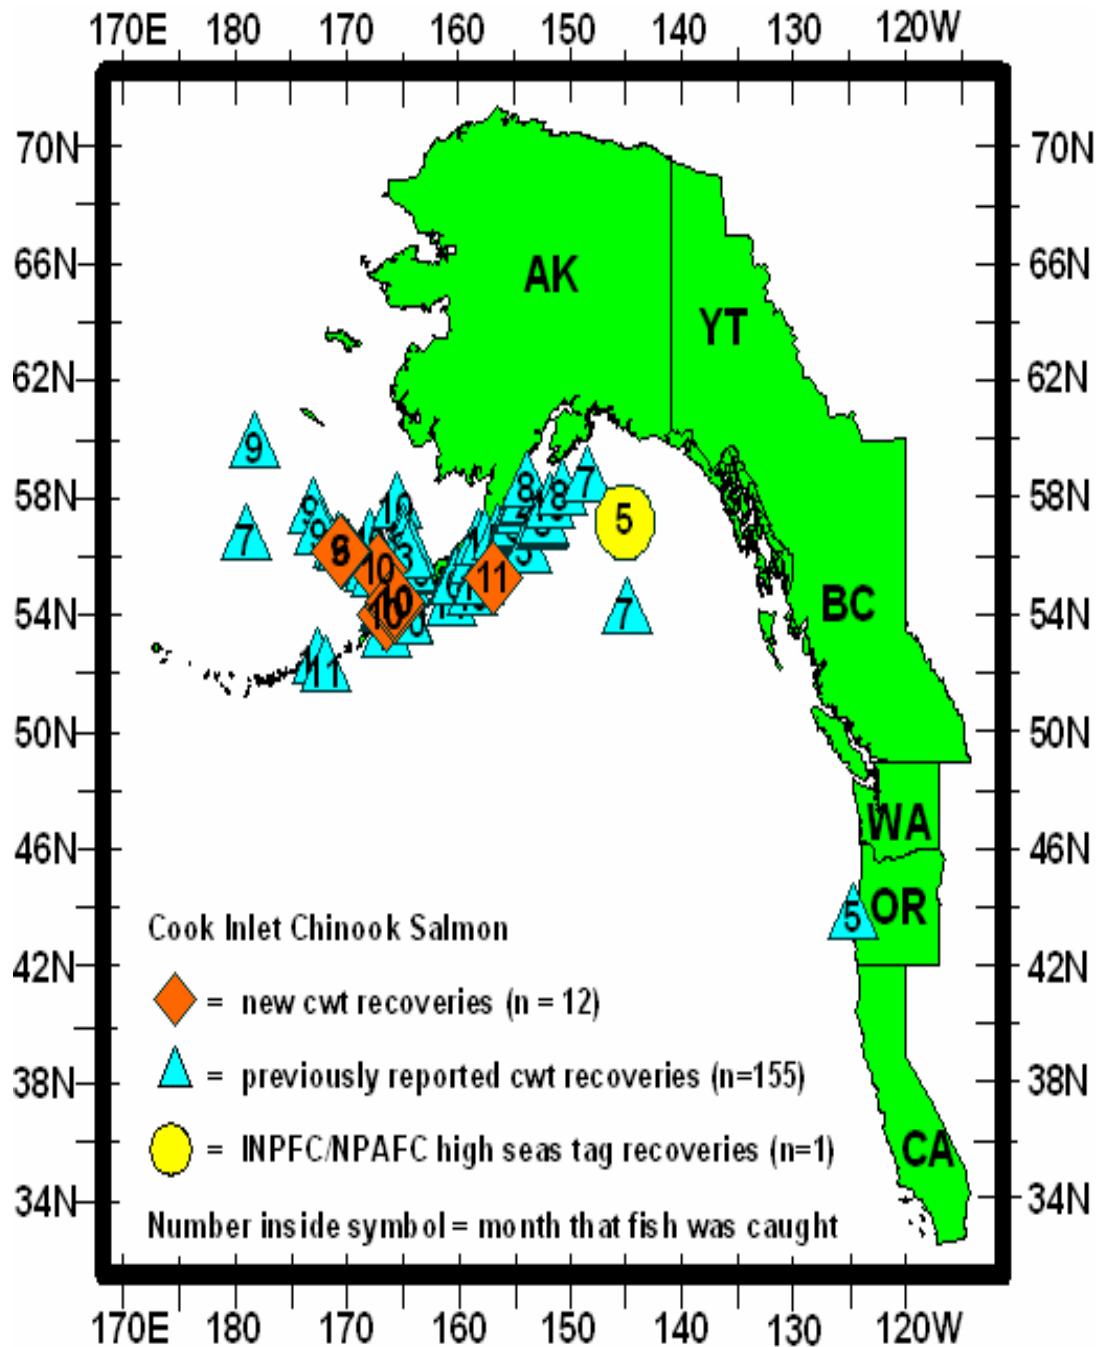

Fig. 3. The ocean distribution of Central Alaska (Cook Inlet) chinook salmon, as shown by high seas tag recoveries, 1956-2005. Processing plant recoveries of coded wire tagged (cwt) fish are not included. The geographic locations of 12 new recoveries of cwt fish (Table 1, fish nos. 4-14; Table 2, fish no.11) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

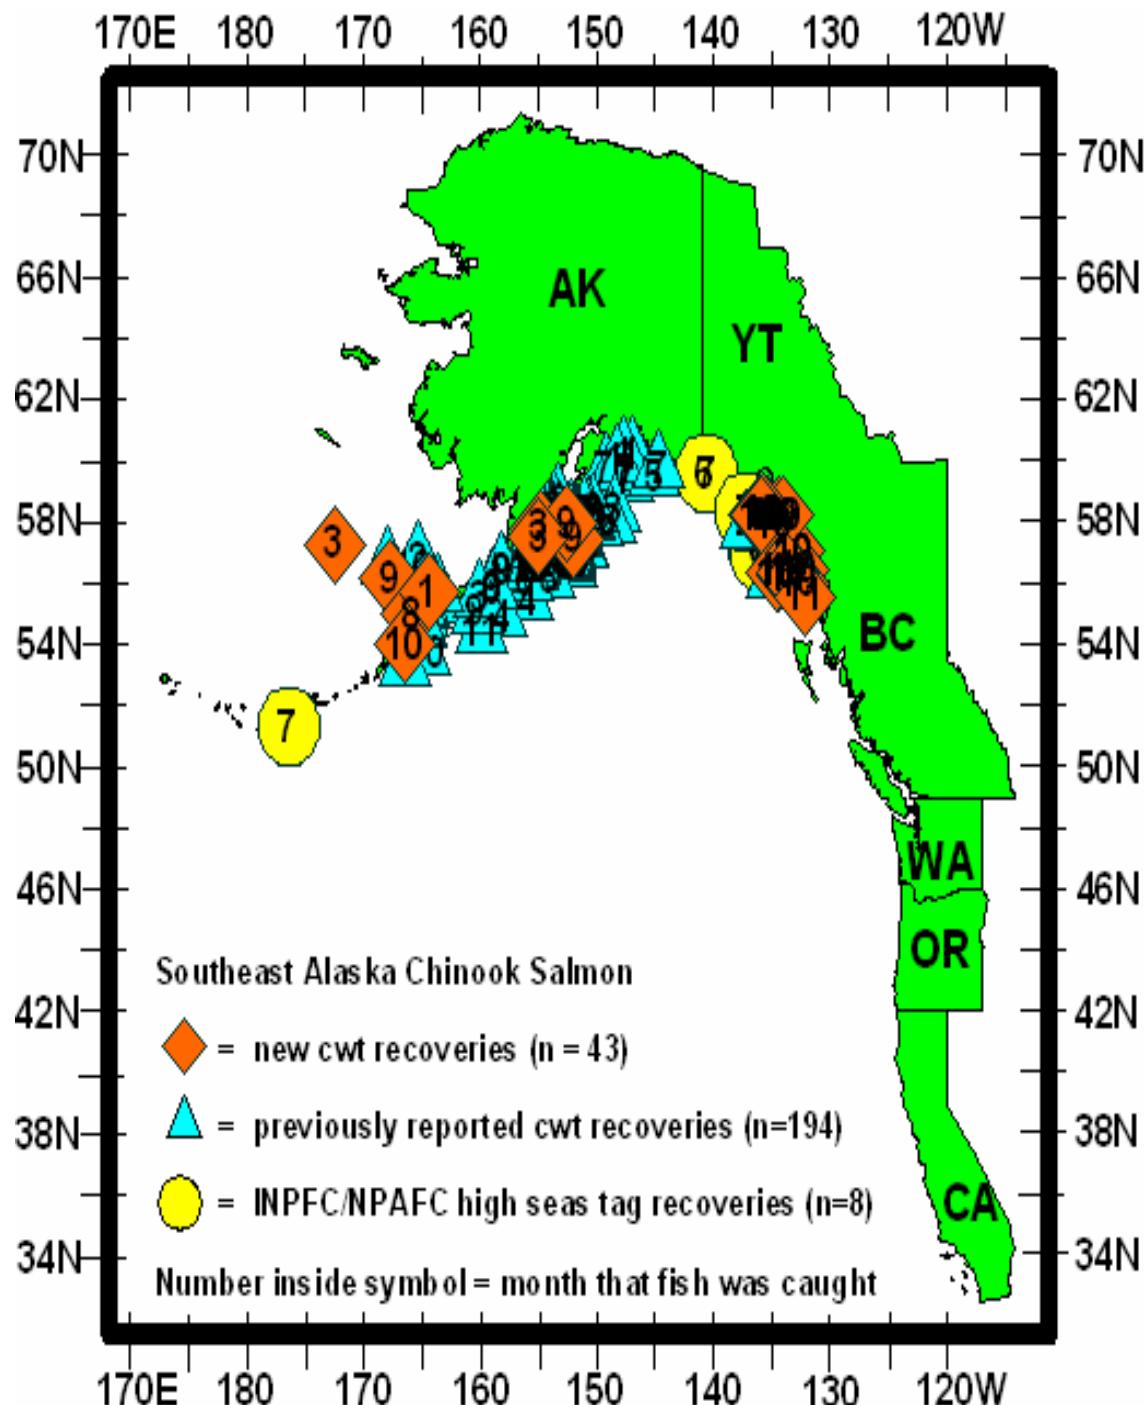

Fig. 4. The ocean distribution of Southeast Alaska chinook salmon, as shown by high seas tag recoveries, 1956-2005. Processing plant recoveries of coded wire tagged (cwt) fish are not included. The geographic locations of 43 new recoveries of cwt fish (Table 1, fish nos. 15-21 and 66-69; Table 2, fish. nos. 12-44) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

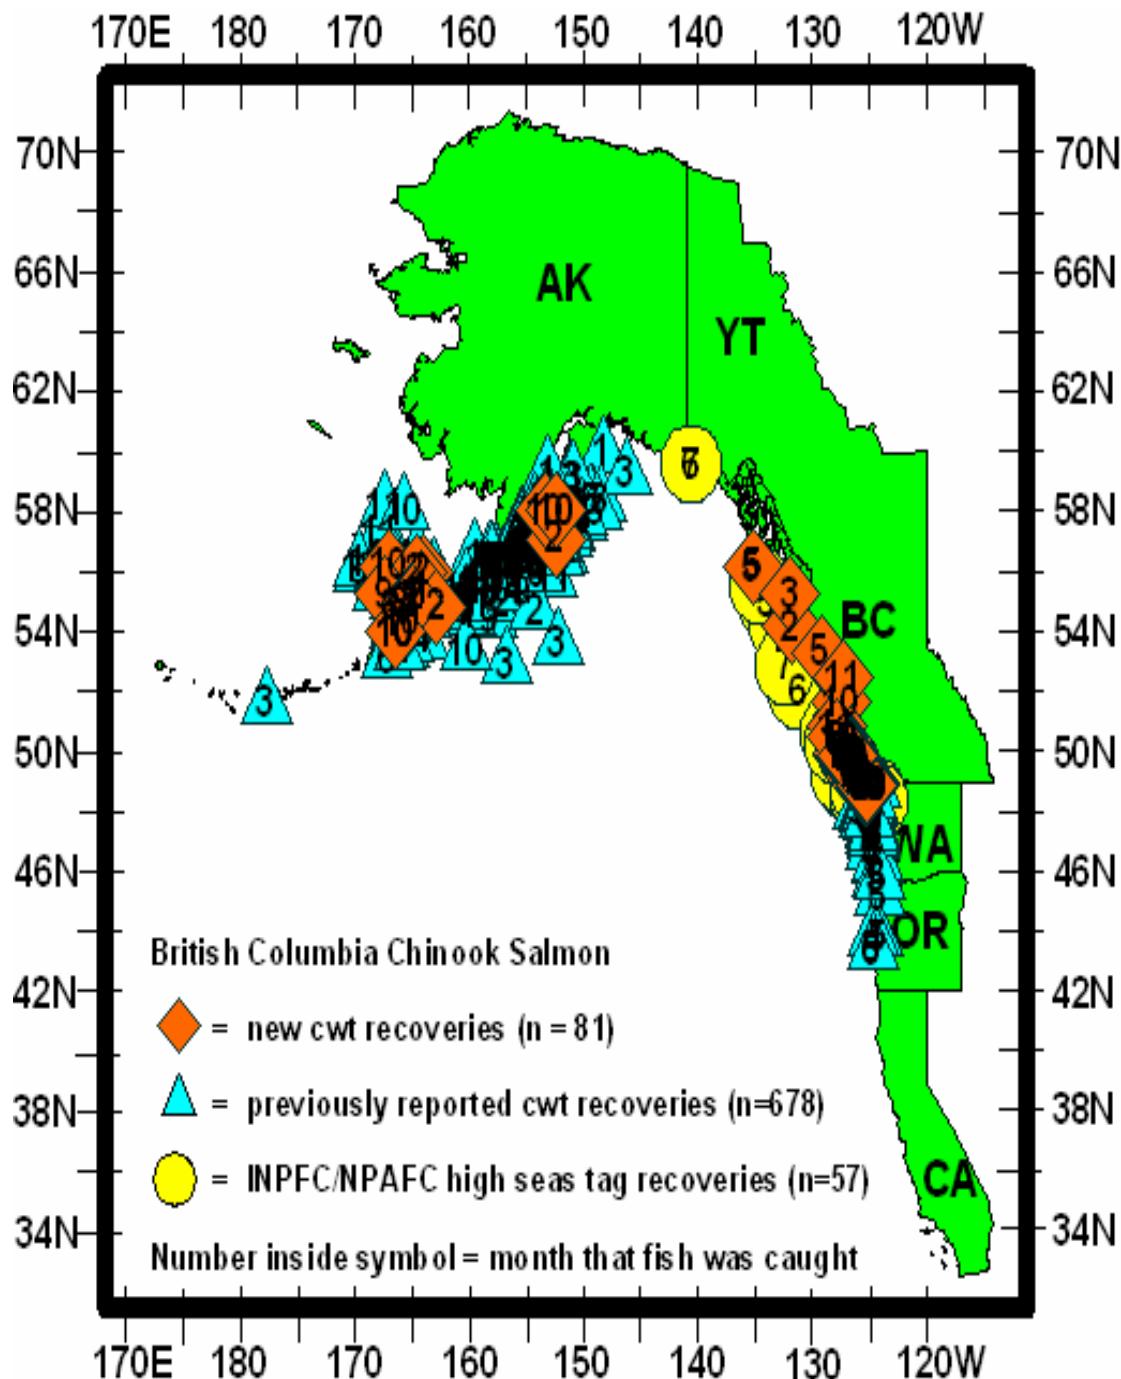

Fig. 5. The ocean distribution of British Columbia chinook salmon, as shown by high seas tag recoveries, 1956-2005. Processing plant recoveries of coded wire tagged (cwt) fish are not included. The geographic locations of 81 new recoveries of cwt fish (Table 1, fish nos. 22-46 and 70-74; Table 2, fish nos. 45-56 and 160-204) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

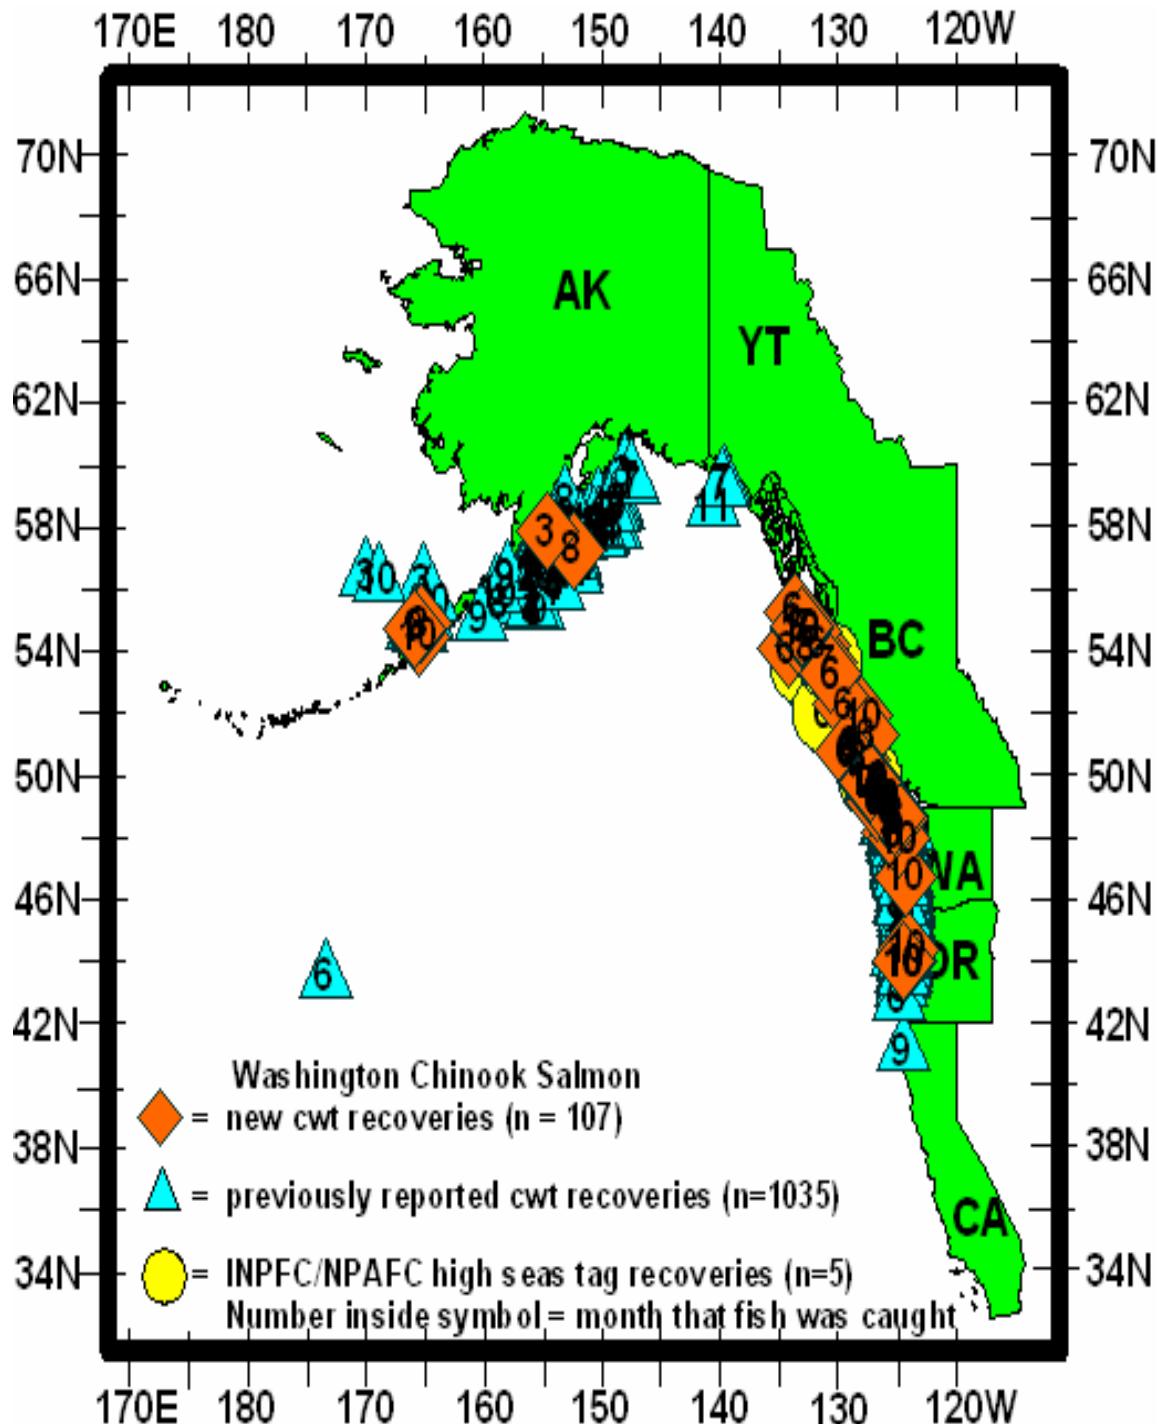

Fig. 6. The ocean distribution of Washington chinook salmon, as shown by high seas tag recoveries, 1956-2005. Processing plant recoveries of coded wire tagged (cwt) fish are not included. The geographic locations of 107 new recoveries of cwt fish (Table 1, fish nos. 47-52 and 75-77; Table 2, fish nos. 57-80 and 205-282) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

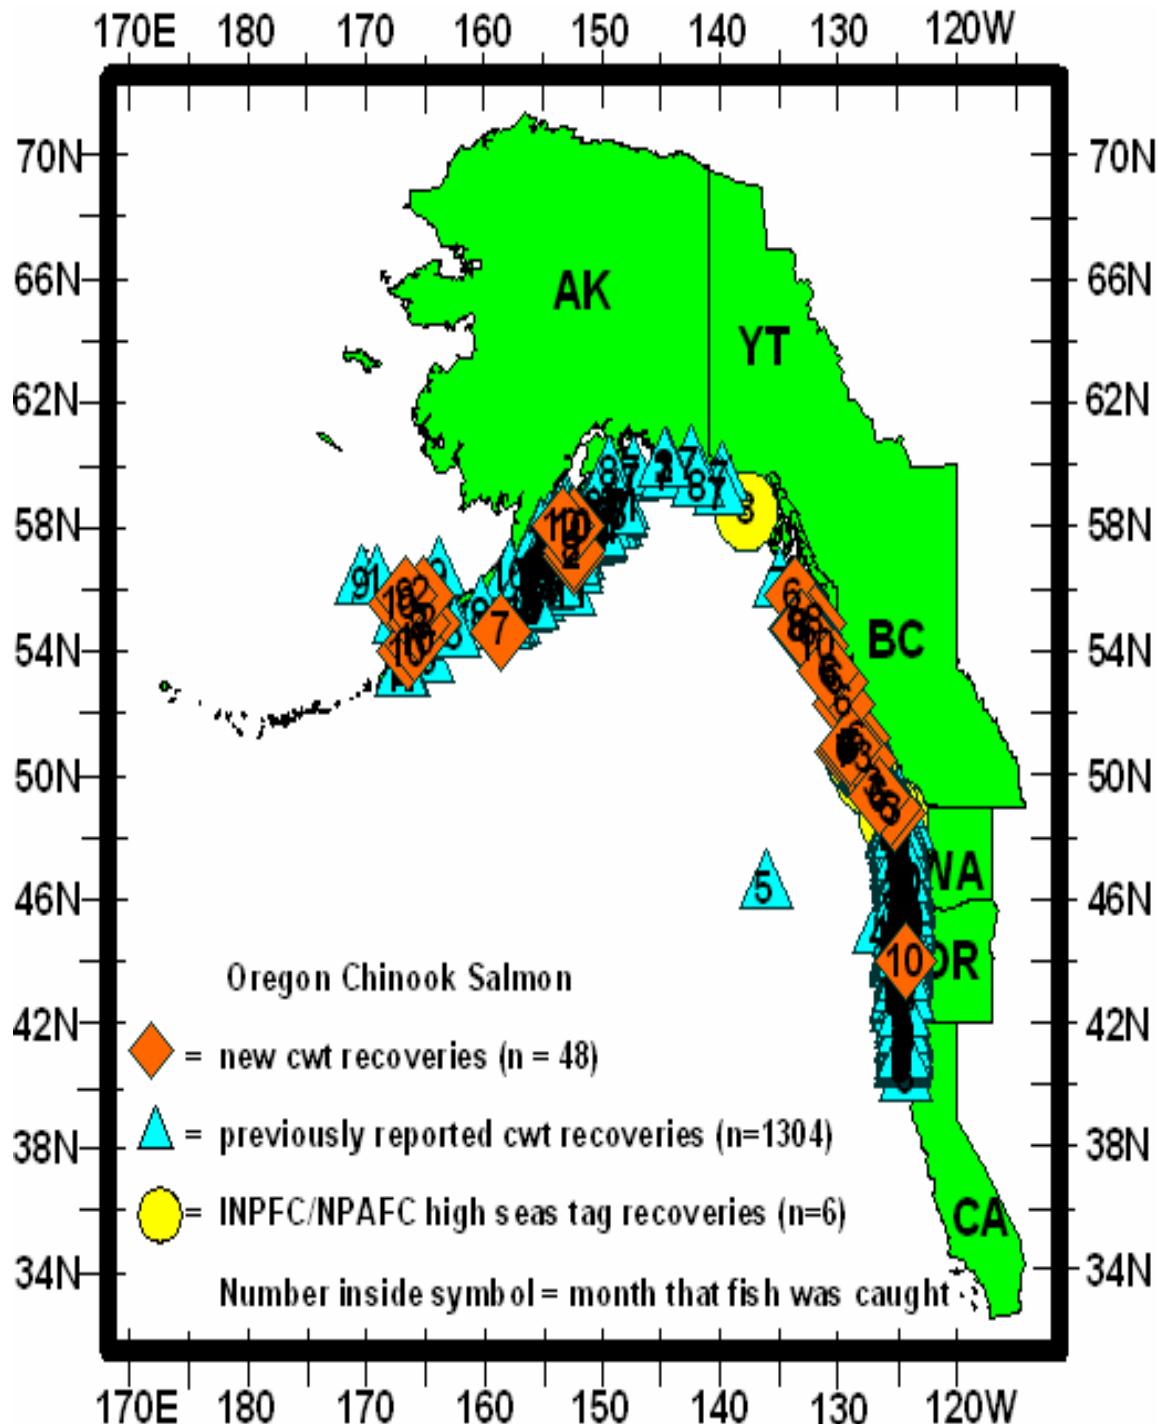

Fig. 7. The ocean distribution of Oregon chinook salmon, as shown by high seas tag recoveries, 1956-2005. Processing plant recoveries of coded wire tagged (cwt) fish are not included. The geographic locations of 48 new recoveries of cwt fish (Table 1, fish nos. 53-64 and 78-83; Table 2, fish nos. 81-106 and 283-290) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

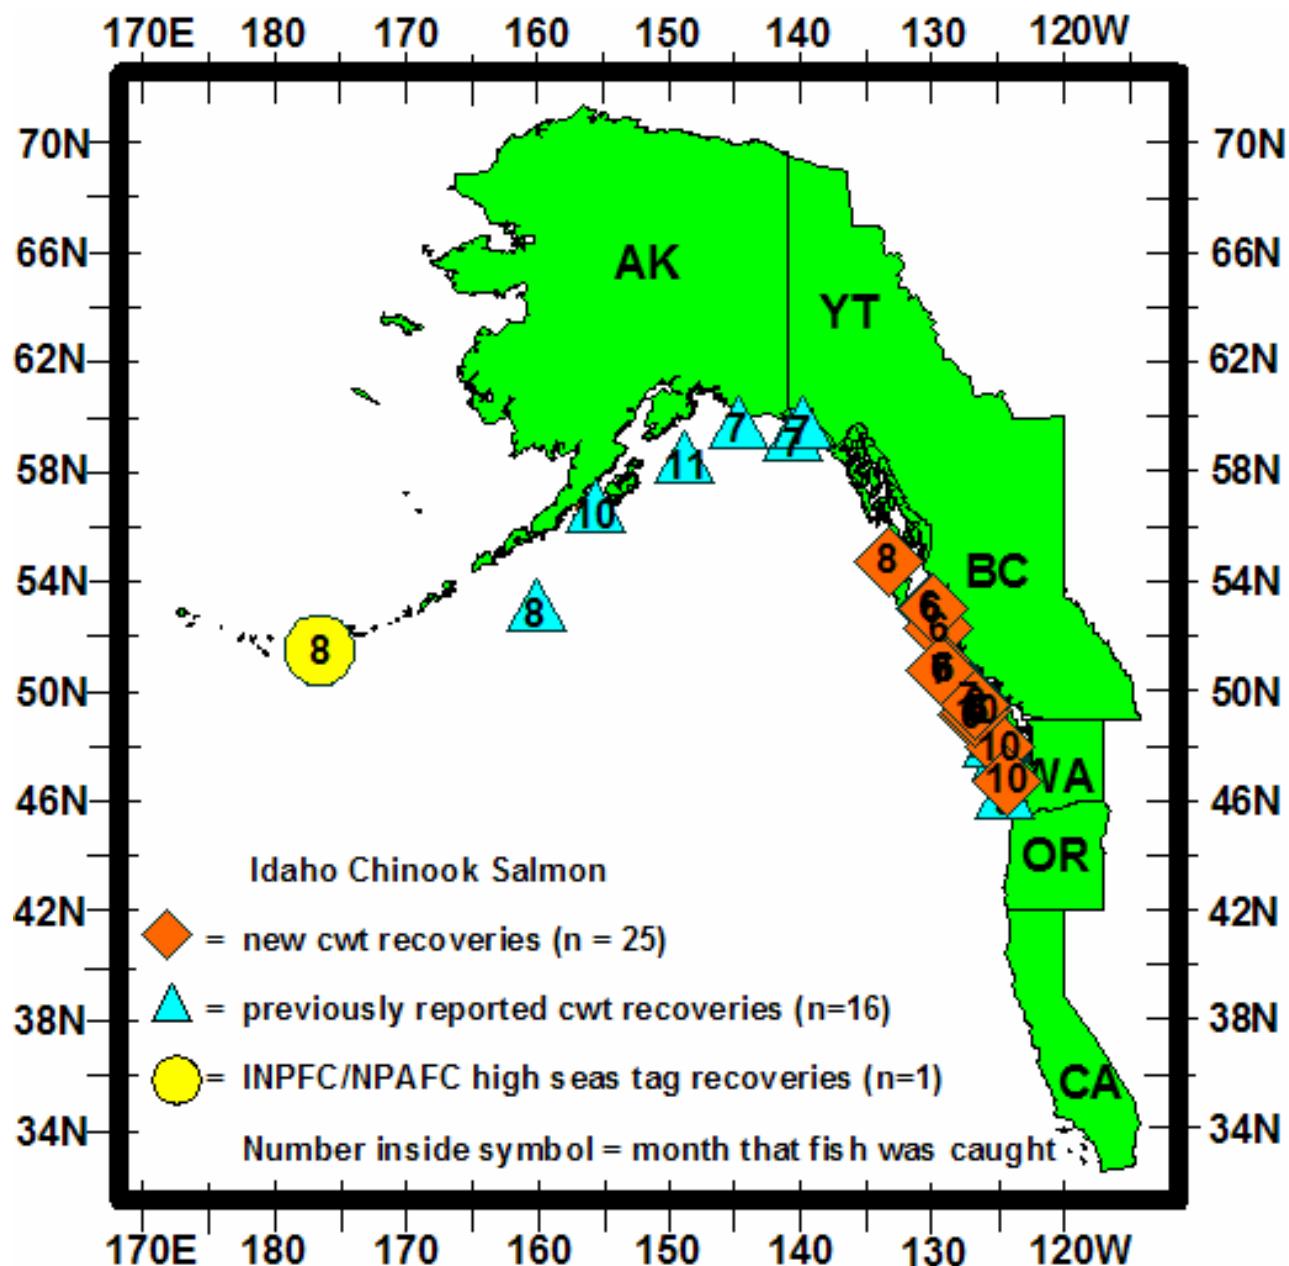

Fig. 8. The ocean distribution of Idaho chinook salmon, as shown by high seas tag recoveries, 1956-2005. The geographic location of 25 new recoveries of cwt fish (Table 2, fish nos. 107-117 and 291-304) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

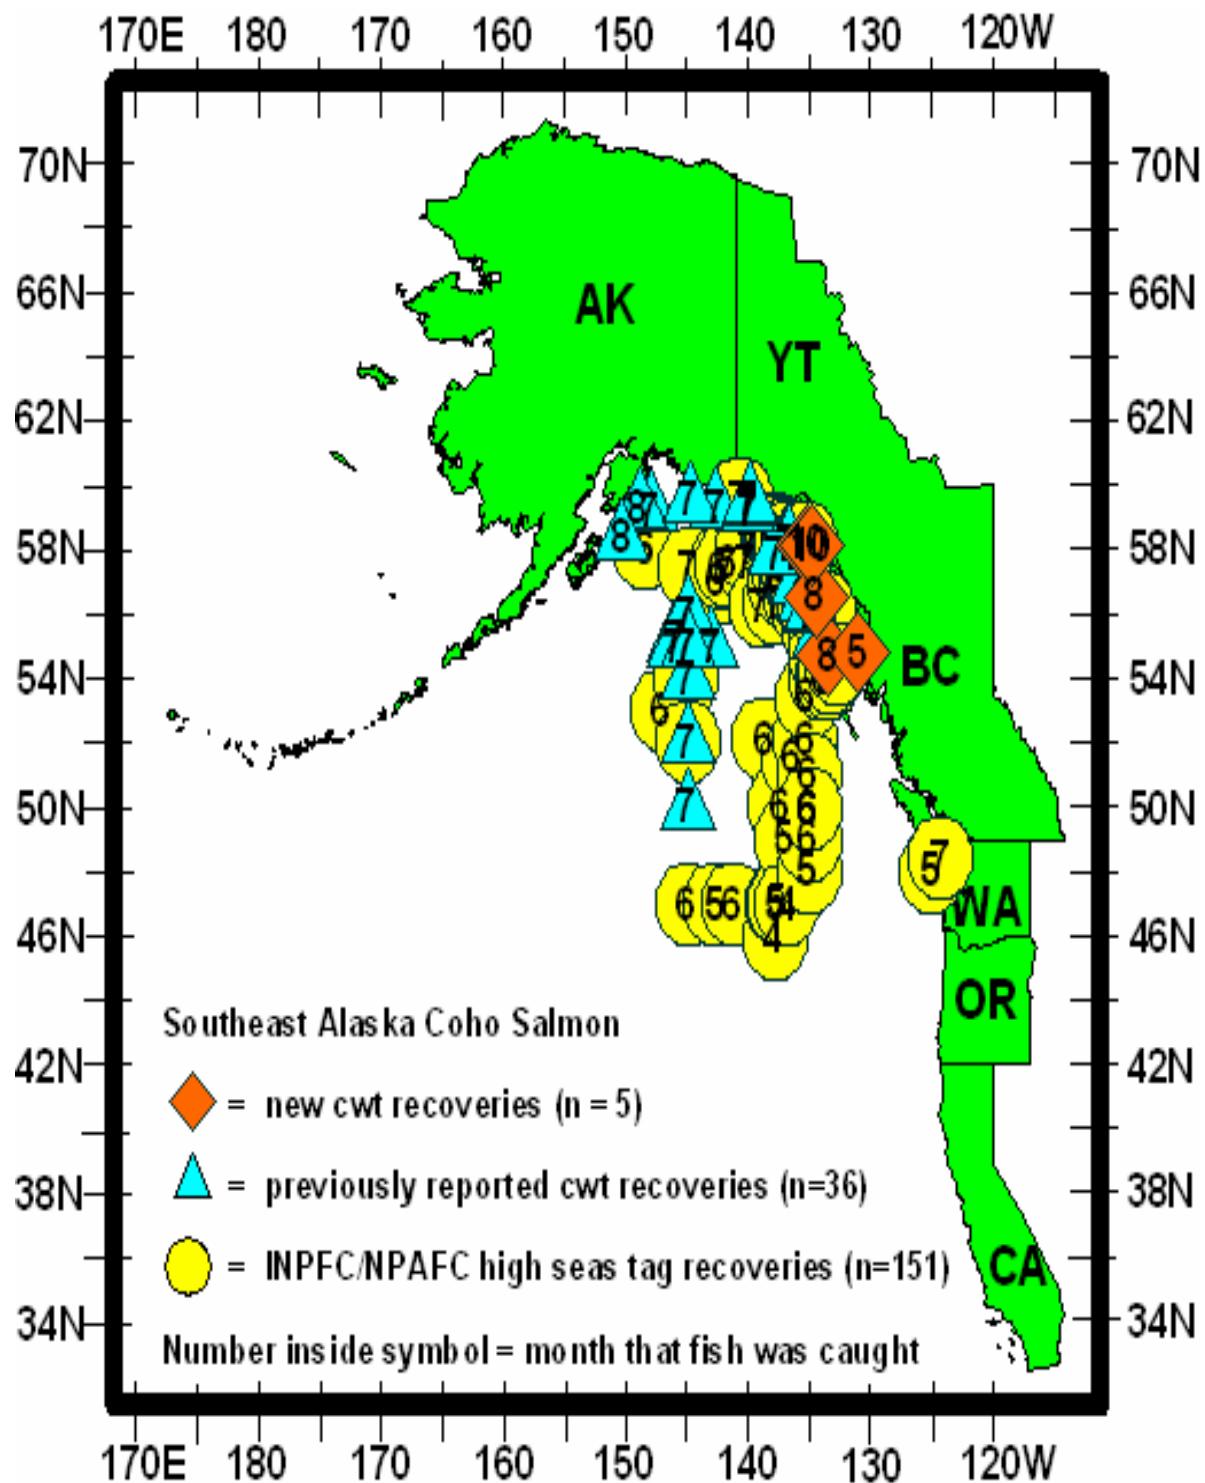

Fig. 9. The ocean distribution of Southeast Alaska coho salmon, as shown by high seas tag recoveries, 1956-2005. The geographic location of 5 new recoveries of cwt fish (Table 2, fish nos. 118-122) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

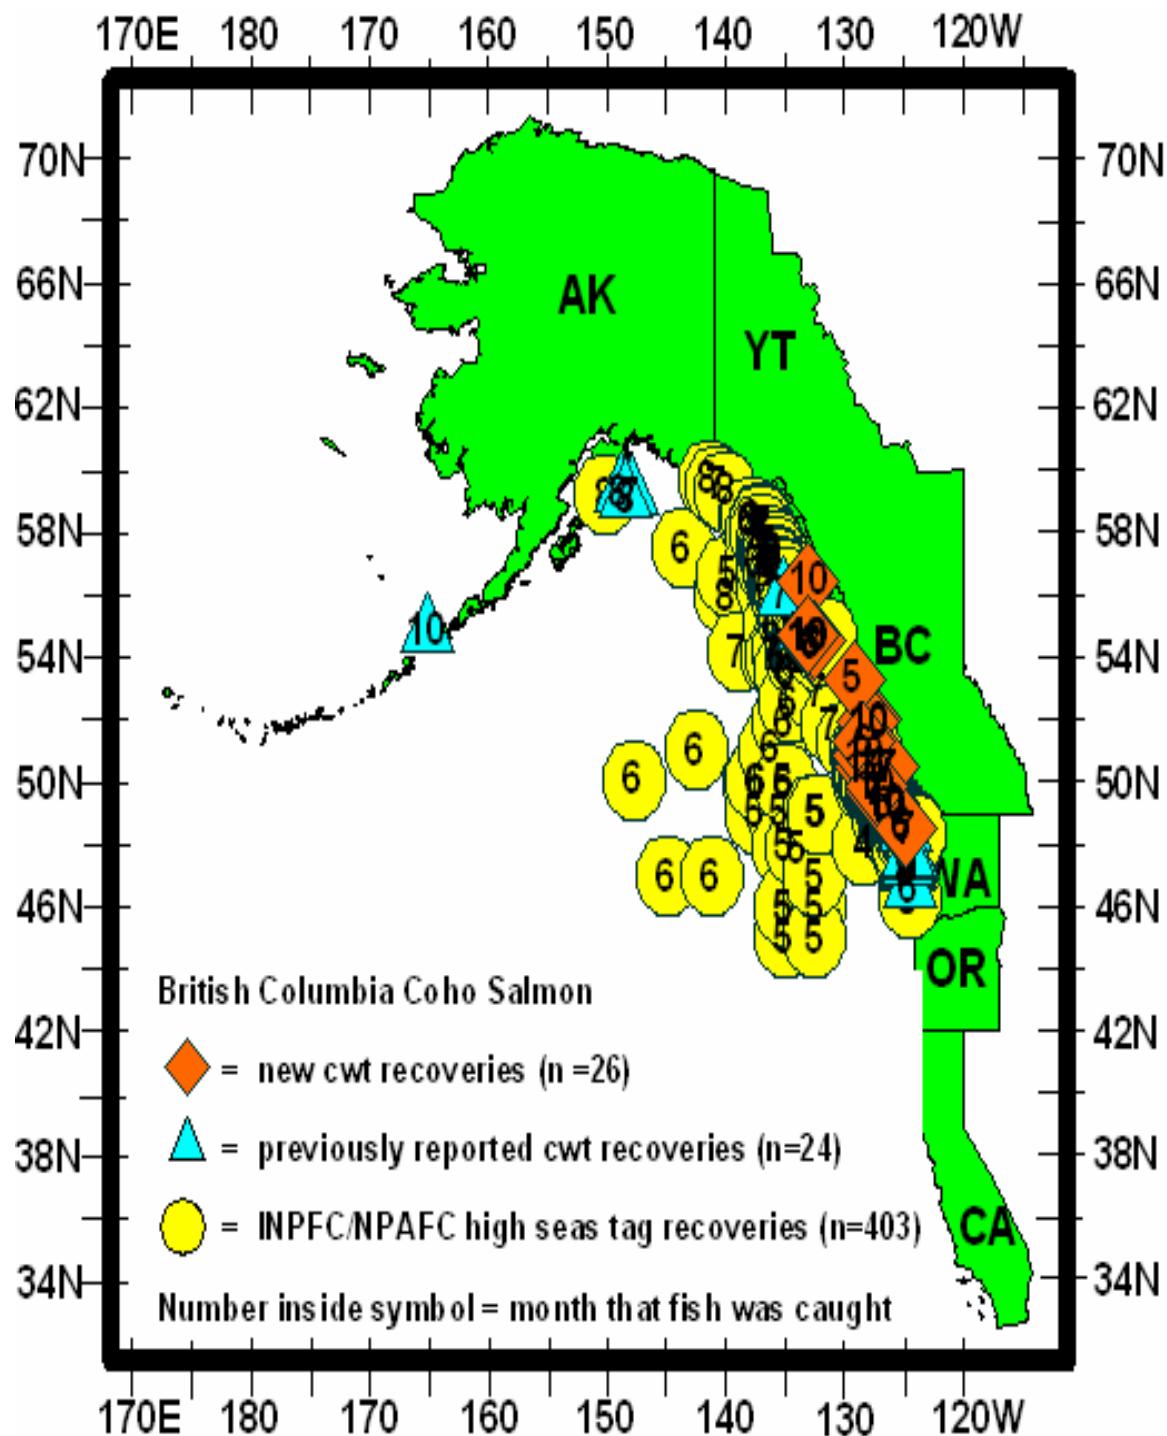

Fig. 10. The ocean distribution of British Columbia coho salmon, as shown by high seas tag recoveries, 1956-2005. The geographic location of 26 new recoveries of cwt fish (Table 2, fish nos. 123-138 and 305-314) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

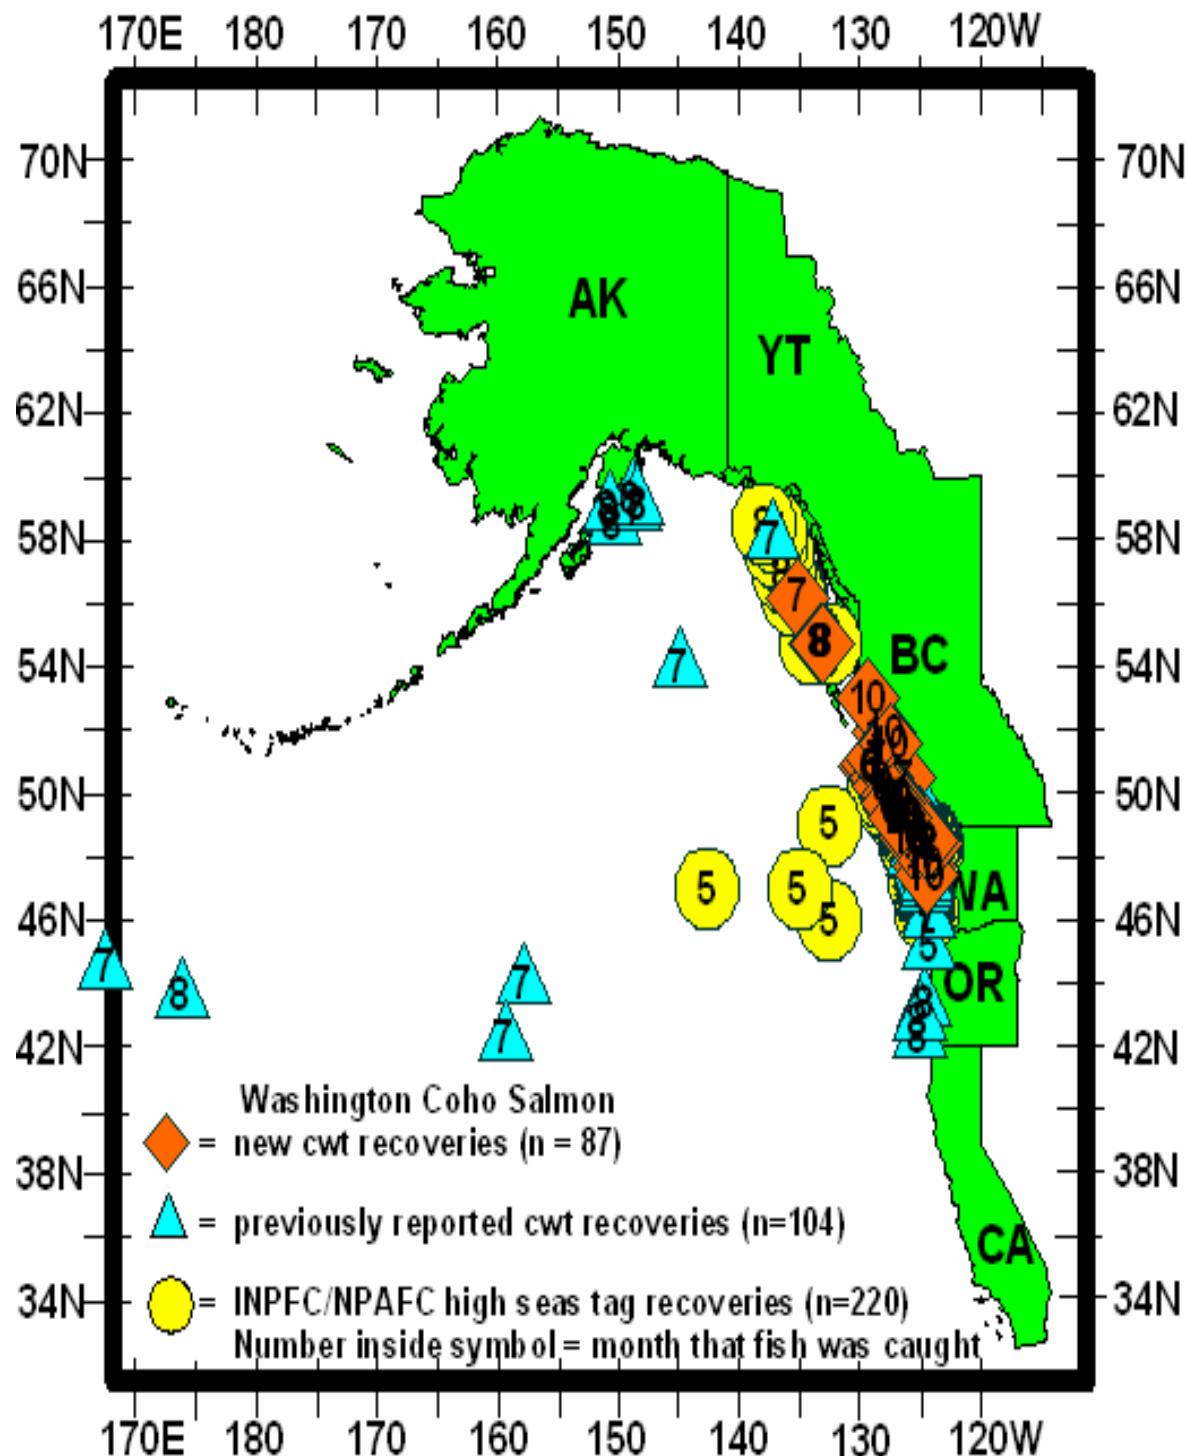

Fig. 11. The ocean distribution of Washington coho salmon, as shown by high seas tag recoveries, 1956-2005. The geographic location of 87 new recoveries of cwt fish (Table 2, fish nos. 139-155 and 315-384) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

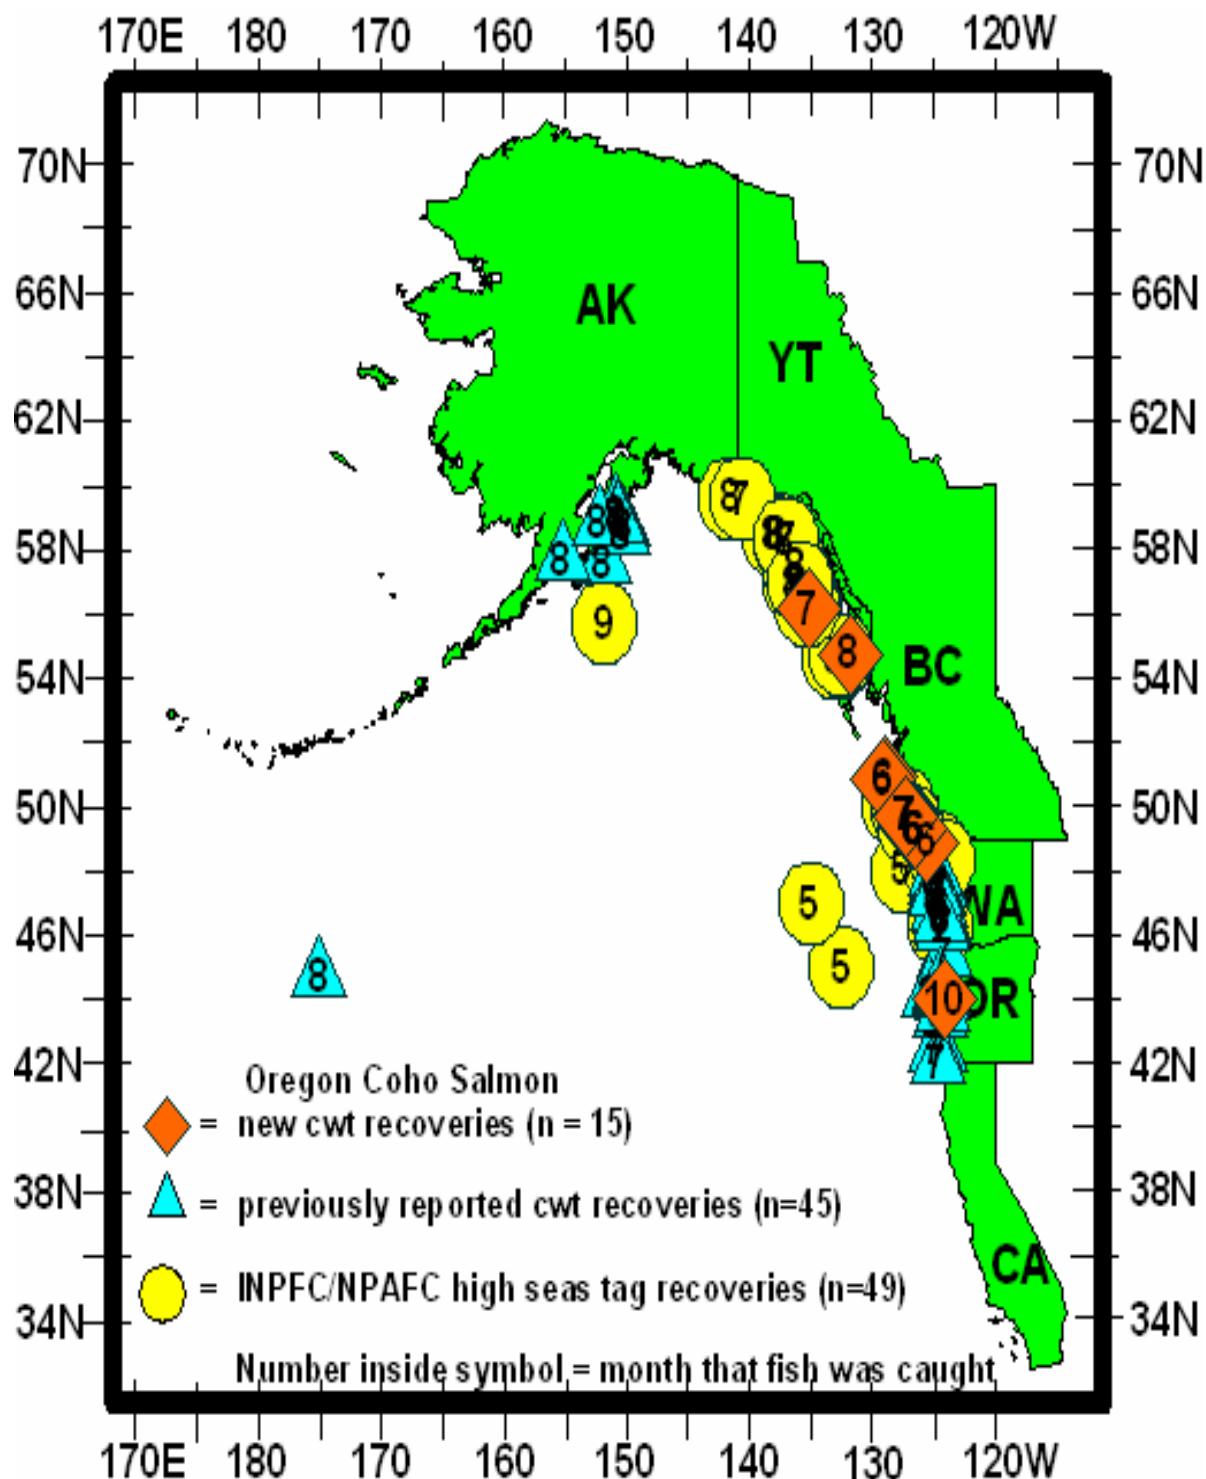

Fig. 12. The ocean distribution of Oregon coho salmon, as shown by high seas tag recoveries, 1956-2005. The geographic location of 15 new recoveries of cwt fish (Table 2, fish nos. 156-159 and 385-395) are indicated in the figure by closed (orange) diamonds. AK=Alaska, YT=Yukon Territory, BC=British Columbia, WA=Washington, OR=Oregon, CA=California.

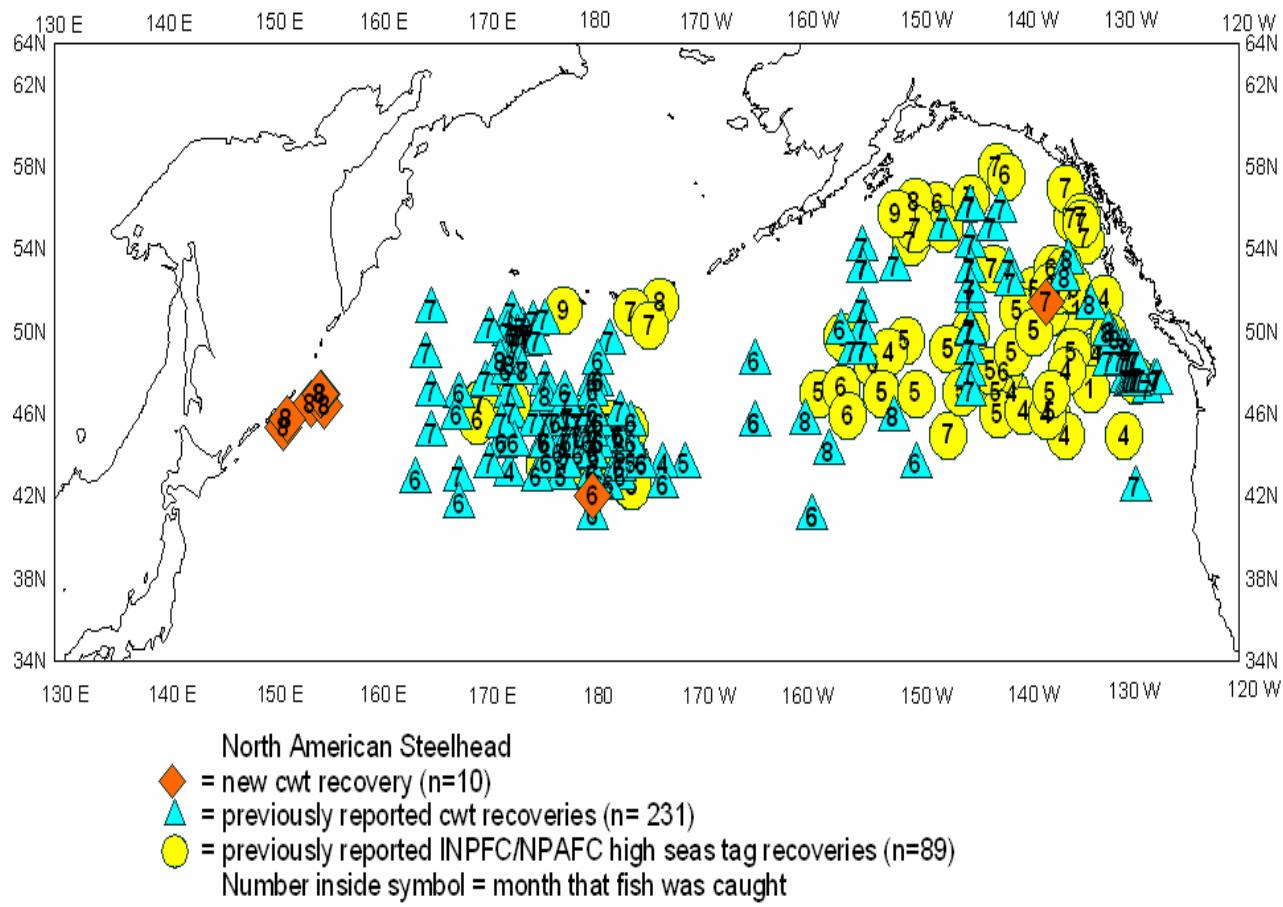

Fig. 13. The ocean distribution of North American steelhead trout, as shown by INPFC/NPAFC high seas tag and CWT recoveries, 1956-2004. The geographic locations of ten new recoveries of CWT steelhead (Table 2) are indicated by a closed diamond.

Table 1. Release and recovery information for coded-wire tagged salmon (*Oncorhynchus spp.*) caught in 2004-2005 U.S. commercial groundfish trawl fisheries for walleye pollock (*Theragra chalcogramma*) in the Bering Sea, Aleutian Islands, and Gulf of Alaska. All recoveries in the table are reported for the first time (1 September 2004-31 August 2005 reporting period). Species: CHIN=chinook salmon (*O. tshawytscha*), CHUM=chum salmon (*O. keta*). Run type: SP=spring, SU=summer, F=fall. Rearing type: H=hatchery, W=wild. State: AK=Alaska, BC=British Columbia, OR=Oregon, WA=Washington, YT=Yukon Territory. TSFT=Tip of snout to fork of tail length. Wt=whole body weight. Sex: M=male, F=female. NMFS statistical areas are shown in Appendix Fig. 1.

¹Region: CECR=Central Columbia R (Bonneville Dam to McNary Dam), CNAK=central Alaska, COBC=Coastal British Columbia, FRTH=Fraser R-Thompson R, GST=Georgia Strait, LOCR=Lower Columbia R (mouth to Bonneville Dam), NASK=Nass R - Skeena R, NOOK=Nooksack R, NOOR=North Coastal Oregon, NWC=North Washington Coast, SEAK=Southeast Alaska, SOOR=South Coastal Oregon, UPCR=Upper Columbia R (above McNary Dam; excluding Snake R); WCVI=Western Vancouver Island, YUKN=Yukon Territory (Yukon R in Yukon Territory only).

²Basin (if different than region): CCST=Central Coastal BC, COOK=Cook Inlet, COQU=Coquille R, GSMN=Georgia Strait-Mainland North, GSVI=Georgia Strait-Vancouver Island, LEWI=Lewis R/WA, LWFR=Lower Fraser R (below Hope+tributaries), NWVI=NW Vancouver Island, QEQU=Queets R - Quinault R, SAM=Samish R, SAND=Sandy R/OR, SIXE=Sixes R-Elk R-Floras Cr, SIYA=Siletz R - Yaquina R, SKNA=Skeena R, SWVI=SW Vancouver Island, TOMF, UMAT=, UMPQ=Umpqua, UPFR=Upper Fraser R (above Hope+tribs; excluding Thompson R), WACO=Wanapum R-Coulee Res/WA, WILL=Willamette R., WTN=Wilson R-Trask R-Nestucca R, YOCL=Youngs Bay-Clatskanie R/OR

³Agency: ADFG=Alaska Department of Fish & Game, CDFO=Canadian Department of Fisheries and Oceans, FWS=U.S. Fish and Wildlife Service, KTHC=Karuk Tribe (CA), NMFS=National Marine Fisheries Service (AK), NSRA=Northern Southeast Regional Aquaculture Assn. (AK), ODFW=Oregon Department of Fish & Wildlife, QDNR=Quinault Department of Natural Resources, SSRA=Southern Southeast Regional Aquaculture Assn. (AK), WDFW=Washington Department of Fish & Wildlife.

Table 2. Release and recovery information for coded-wire tagged salmonids (*Oncorhynchus* spp.) caught by Canadian, Japanese, and Russian salmon research vessels in the Bering Sea and North Pacific Ocean. All recoveries in the table are reported for the first time (1 September 2003 - 31 August 2004 reporting period). Species: CHIN=chinook salmon (*O. tshawytscha*), COHO=coho salmon (*O. kisutch*), STEEL=steelhead trout (*O. mykiss*). Run type: F=fall (includes type S coho), LF=late fall N coho, SP=spring, SU=summer, UB=late fall upriver bright chinook, W=winter. Rearing type: H= Hatchery. State: AK = Alaska, ID=Idaho, OR = Oregon. TSFT = Tip of snout to fork of tail length. Wt = whole body weight. Sex: M = male, F = female. Gear: G=research gillnet, L=research longline, T=research trawl.
