HIGH SEAS SALMONID CODED-WIRE TAG RECOVERY DATA, 2006

ABSTRACT

Information on high seas recoveries of coded-wire tagged (CWT) salmonids (*Oncorhynchus* spp.) has been reported annually to the International North Pacific Fisheries Commission (1981-1992) and to the North Pacific Anadromous Fish Commission (NPAFC, 1993-present). Data from these CWT recoveries are also reported into the coastwide on-line CWT recovery database (<http://www.rmpc.org>) maintained by the Regional Mark Processing Center (RMPC) of the Pacific States Marine Fisheries Commission (PSMFC). This document lists recovery data for 1135 CWT salmonids that will be reported to PSMFC/RMPC for the first time. These 1135 CWTs were recovered from the 2005-2006 U.S. groundfish trawl fisheries in the eastern Bering Sea-Aleutian Islands (58 Chinook salmon, *Oncorhynchus tshawytscha*) and Gulf of Alaska (19 Chinook salmon), from the 2002-2005 Pacific hake (*Merluccius productus*) trawl fishery in the Northern Pacific Ocean off Washington/Oregon/California (WA/OR/CA, 877 Chinook salmon and 43 coho salmon, *Oncorhynchus kisutch*), from the 2002-2005 limited-entry non-hake groundfish trawl fishery off WA/OR/CA (134 Chinook salmon), and from 2005-2006 Japanese research vessel operations in the central North Pacific Ocean (4 steelhead, *Oncorhynchus mykiss*). Significant northwestern extensions of the known ocean ranges for Chinook salmon originating from Southeast Alaska, British Columbia, Washington, and Oregon into the Bering Sea are also reported.

INTRODUCTION

Since 1981, Pacific salmon (*Oncorhynchus* spp.) tagged with coded-wire tags (CWTs) have been recovered in commercial fisheries and research programs in the North Pacific Ocean, Gulf of Alaska, and Bering Sea-Aleutian Islands. Data from these high seas CWT recoveries have been reported annually to the International North Pacific Fisheries Commission (Dahlberg 1981-1982; Wertheimer and Dahlberg 1983-1984; Dahlberg and Fowler 1985; Dahlberg et al. 1986-1992; Margolis 1985; Margolis et al. 1989; McKinnell et al. 1991) and to the North Pacific Anadromous Fish Commission (Dahlberg et al. 1993-97; Myers et al. 1998-2004; Morris 2004). Data from these CWT recoveries have also been reported into the coastwide on-line CWT recovery database (<http://www.rmpc.org>) maintained by the Regional Mark Processing Center (RMPC) of the Pacific States Marine Fisheries Commission (PSMFC).

In this document, we list previously unreported data for CWT recoveries from the salmon bycatch of U.S. groundfish trawl fisheries for walleye pollock (*Theragra chalcogramma*) in the eastern Bering Sea-Aleutian Islands and Gulf of Alaska, from the salmon bycatch of U.S. groundfish trawl fishery for Pacific hake (*Merluccius productus*) in the North Pacific Ocean off Washington/Oregon/California (WA/OR/CA), from the limited-entry non-hake groundfish trawl fishery off WA/OR/CA, and from Japanese salmon research vessel operations in the central North Pacific Ocean. New recoveries of CWT salmonids are compared to previous recoveries of CWTs reported to the International North Pacific Fisheries Commission (INPFC, 1956-2002) and to NPAFC (2003-present). Significant new information on the known ocean ranges of particular stocks of salmon is presented.

RESULTS AND DISCUSSION

This document lists recovery data for 1135 CWT salmonids that will be reported to PSMFC/RMPC database for the first time. Of these 1135 new CWT recoveries, 19 CWT Chinook salmon were recovered from the Gulf of Alaska trawl fishery in 2005 and 2006 (Table 1), 58 CWT Chinook salmon were recovered from the Bering Sea-Aleutian Islands trawl fishery in 2005 and 2006 (Table 2), 877 CWT Chinook salmon and 43 CWT coho salmon were recovered from the Pacific hake trawl fishery in the North Pacific Ocean off WA/OR/CA in 2002-2005 (Table 3), and 134 CWT Chinook salmon were recovered from the limited-entry non-hake groundfish trawl fishery off WA/OR/CA in 2002-2005 (Table 4). Four CWT steelhead were also recovered from Japanese gillnet research in the central North Pacific Ocean (Table 5).

The geographic locations of new recoveries of CWT Chinook salmon and steelhead are compared to previous recoveries and are summarized by province or state of origin (Figures 1-9). A recovery of a wild Taku River Chinook salmon in the Bering Sea in August, 2005 ($59^{\circ}15'N$, $175^{\circ}21'W$) is a northwestern extension of the known ocean range of Southeast Alaska Chinook salmon (Figure 3, Table 2: recovery_id= 2005091028). A recovery of a Conuma River hatchery Chinook salmon in the Bering Sea in July, 2005 ($59^{\circ}15'N$, $173^{\circ}31'W$) is a northwestern extension of the known ocean range of British Columbia Chinook salmon (Figure 4, Table 2: recovery_id= 2005091050). Two recoveries of Salmon River (WA) hatchery Chinook salmon in the Bering Sea in June ($57^{\circ}49'N$, $173^{\circ}18'W$) and July, 2005 ($57^{\circ}31'N$, $173^{\circ}18'W$) indicate a northwestern extension of the known ocean range of Washington Chinook salmon (Figure 5,

Table 2: recovery ids= 2005091034, 2005091032). A recovery of a Salmon River (OR) hatchery Chinook salmon in the Bering Sea in August, 2005 (59°32'N, 175°15'W) is a northwestern extension of the known ocean range of Oregon Chinook salmon (Figure 6, Table 2: recovery_id= 2005091035).

ACKNOWLEDGMENTS

Fishermen, processors, observers, and scientists who participated in the high seas CWT recovery program are gratefully acknowledged. Cathy Robinson, Auke Bay Laboratory (ABL), AFSC, NMFS, dissected salmon snouts, decoded CWTs, and entered CWT recovery data in an electronic database. Darcie Neff (NOAA, NMFS, Auke Bay Laboratory) helped with mapping software. Emily Fergusson (NOAA, NMFS, Auke Bay Laboratory) helped with formatting.
