Notes:

* Hectares (HA) x 2.471044 = Acres (AC); Acres (AC) x 0.404687 = Hectares (HA)

§ Computed Submerged Lands Act Boundary for entire planning area using NOAA nautical chart source data. Block counts and areal measurements reflect the official Federal position.

∞ Computed Submerged Lands Act Boundary for entire planning area using NOAA nautical chart source data. Block counts and areal measurements are for planning purposes only.

⊗ Computed Submerged Lands Act Boundary for entire planning area using a combination of NOAA nautical chart and USGS 1:63,360-scale map source data. Block counts and areal measurements are for planning purposes only.

Δ No Submerged Lands Act Boundary has been computed. Block counts and areal measurements are for full “regular” and “irregular” blocks.

◆ Computed Territorial Submerged Lands Act Boundary for the U.S. Virgin Islands using NOAA nautical chart source data. No boundary has been computed for the Commonwealth of Puerto Rico. Block counts and areal measurements are for planning purposes only.

1 The most seaward extent of the planning area is determined by an international maritime boundary or agreement, International Court of Justice ruling, or another planning area.

2 The most seaward extent of the planning area extends beyond the Continental Shelf Boundary as defined for the Exclusive Economic Zone Limits in 60 FR 43825, August 23, 1995, to the limit of protraction.

3 The most seaward extent of the planning area is currently determined by a provisional maritime boundary and the limit of protraction, and will be adjusted once a U.S.-Cuba maritime boundary treaty is ratified.

4 The most seaward extent of the PR/VI area is the Continental Shelf Boundary as defined for the Exclusive Economic Zone Limit in 60 FR 43825, August 23, 1995, to the limit of protraction.

A North American Datum 1983/World Geodetic System 1984 (NAD 83/WGS 84)

B North American Datum 1927 (NAD 27)
