A DESCRIPTION OF THE GMAQS DATA ARCHIVE FILES

The Gulf of Mexico Air Quality Study (GMAQS) data archive files include surface air quality and meteorological data, upper air meteorological data, air quality measurements taken aloft from aircraft, and hydrocarbon samples collected during the study by ESE and STI. The data collected and methodology used are described in "Field Plan for the MMS GMAQS" (Roberts, et. al., 1992). In addition to data from the GMAQS, the data archive files contain other data which has been obtained to augment the data from the study. The other data include: routine surface and upper air measurements, buoy data and C-MAN data from the National Climatic Data Center (NCDC); surface air quality and meteorological data from the Texas Natural Resources Conversation Commission (TNRCC); surface air quality data from the Louisiana Department of Environmental Quality (LDEQ); surface air quality data for the portions of the states of Alabama, Mississippi, and Florida from the USEPA; surface air quality data from the Southeast Texas Regional Planning Commission (SETRPC); offshore meteorological data from the Texas-Louisiana Shelf Circulation Program (LATEX); surface air quality and meteorological data from the COAST and HRM programs obtained from Desert Research Institute (DRI). The general procedures used in preparing the data archive are described in the "GMAQS Data Archival Protocol" (SAI, 1993). This document presents a summary of the data included in the archive files and a description of the formats used for the files.

Organization of the Data Archive Files

The data archive files are of several types. All hourly surface data is organized into a single file for each month of the study. Similarly, all upper air meteorological data is organized into a single file for each month of the study. Additional files define the parameter codes, the units codes, and the locations of sites.

Each data base file has been given a unique name. The file names are of the format 'typMMMYY.vsn' where:

typ	type of data file format
	hr = hourly
	sd = sounding
MMM	month (jan, feb,...)
YY	year (93,94,...)
vsn	version number (1.1, 1.2,...)

In addition to the surface and upper air files, aircraft data and surface VOC samples collected during the study are provided in the format received from the monitoring contractor.

The Site File

The format of the site file is presented in Table 1. As is the case with all archive files, fields in the file are separated by at least one blank to allow easy importation into spread sheets or data base languages. The Site Abbreviation is a short identifier for a site that has been used in preparing model inputs and displays of observed data and model results. The UTM coordinates are given in kilometers in zone 15. Latitude and longitude location is also given. The Site ID field is a nine character field which may contain state code, county code and site number according to AIRS convention or another identifying string which uniquely identifies the site. It is this Site ID that is used to identify the site in the data archive files. The collection agency identifies the organization from which data for that site was obtained. Sites with a collection agency of "STI" or "ESE" were operated as part of the MMS GMAQS program. The Site Location/Address field gives a brief text description of the location of the site.

The Parameter Codes File

The parameter file contains codes that are used in the data archive files to identify the variables for which data is included. The format of this file is described in Table 2. The file is listed in Appendix B. The first field of the parameter file gives the integer code that identifies the data monitored. The Abbreviation field gives a text identifier corresponding to that code. The Parameter Name field gives a longer description of the variable. The Unit Code is an integer code used in the archive file to identify the units used for the measurements. For each parameter, the code for the units used in the data archive is given. The Unit Name field is a text description corresponding to the unit code in the previous field.

The Surface File

Each record on the surface file contains the monitored data for a single site for up to 24 hours. The contents of each field of the surface file are described in detail in Table 3. The records in the file are sorted by site, parameter, and date.

The Upper Air File

Each record on the upper air file contains the monitored data for up to ten values in a sounding for a single site. Additional records follow to specify the remaining values in the sounding. The contents of each field of the upper air file are described in detail in Table 4. The records in the file are sorted by site, date, time, parameter and sequence number.

Aircraft Data Files

The aircraft data files contain measurements of NOx, ozone, VOCs and other species in addition to some meteorological parameters collected during flights around the Houston area. The format and content of these files is documented in detail in "Data Collected by

the STI Aircraft during the 1993 Gulf of Mexico Air Quality Study" (Anderson, et.al. 1994).

Surface VOC Samples

Summaries of the analyses of VOC samples collected during the GMAQS are in the form of text files produced from spreadsheets. These files are largely self explanatory. A sample of one of these files is presented in Appendix G.

Data Summaries

Tables of availability of surface data are included in Appendix H. A separate table is included for each month of the study with information on variables that were available at each site during that month. An asterisk in the column for a variable and row for a site indicates that data for that variable is available at that site at some time during the month. Data still may be missing for certain time periods during the month.

TABLE 3. Surface File Format

Field Name	First Column	Field Format	Field Description
SITE IDENTIFIER	1	A9	A unique 9 character identifier for the site. Further information about the site is given in the Site File (See Table 1). For some sites, this identifier may be made up of a FIPS state code, a FIPS county code, and a site number. For offshore areas the state code = 99. For offshore areas the county code is assigned based on the Department of the Interior Minerals Management Service lease blocks. Refer to Appendix A. The site number uniquely identifies each air monitoring site within a county.
PARAMETER CODE	11	I5	A code assigned to a specific parameter being measured. Refer to Table 2 and Appendix B.
UNITS CODE	17	I3	A code indicating the dimensional system in which a pollutant concentration is expressed. Refer to Table 2 and Appendix C.
UNITS NAME	21	A10	Descriptive name for the specified units code.
INTERVAL CODE	32	A1	A code indicating the sampling interval for the monitoring activities; see Appendix D.
YEAR	34	I2	The last two digits of the year for which data is being reported.
MONTH	37	I2	The month for which data is being reported (01-12).
DAY	40	I2	The day of the month for which data is being reported (00-31). '00' is specified for daily data.
START TIME	43	I2	The start hour for the first value of the data values. For instantaneous readings the first hour is 0, for average hourly readings the first hour is 1. All values are to be reported in Central Standard Time.
OCCURS 24 TIMES: VALUE DP FLAG	46	I5,1x A1,1x A1,1x	As many as 31 values (a month of daily values) may be specified per record. For hourly data, a days data may be specified in the first 24 fields. VALUE is either a positive (nnnnn) or a signed negative number (-nnnn). DP, decimal indicator for specified value, indicates number of digits to right of implied decimal point for value. Blank DP indicates missing value which will also be entered in VALUE field as -9999. A VALUE of 0 with blank DP means no observation was recorded. Other VALUES are interpreted as missing values; see Appendix E. FLAG is a validity flag indicating that the observed VALUE is exceptional; see Appendix F. NOTE: all values are reported in Central Standard Time.

Note: Each field is followed by a single space.

TABLE 4. Upper Air File Format

Field Name	First Column	Field Format	Field Description
SITE IDENTIFIER	1	A9	A unique 9 character identifier for the site. Further information about the site is in the Site File (See Table 1). For some sites, this identifier may be made up of a FIPS state code, a FIPS county code, and a site number. For offshore areas the state code = 99. For offshore areas the county code is assigned based on the Minerals Management Service lease blocks. Refer to Appendix A. The site number uniquely identifies each air monitoring site within a county.
PARAMETER CODE	11	I5	A code assigned to a specific parameter being measured. Refer to Table 2 and Appendix B.
UNITS CODE	17	I3	A code indicating dimensional system in which concentration is given; see Table 2 and Appendix C.
YEAR	21	I2	The last two digits of the year for which data is being reported.
MONTH	24	I2	The month for which data is being reported (01-12).
DAY	27	I2	The day of the month for which data is being reported (00-31). '00' is specified for daily data.
BEGIN TIME	30	I4	The begin time for the first value of the data values. The format is HHMM where HH is the hour (0-23) and MM the minute (0-59), in Central Standard Time.
END TIME	35	I4	The end time for the record of data values; format is HHMM where HH is the hour (0-23) and MM the minute (0-59), in Central Standard Time.
NUMBER OF OBS	40	I4	The number of observations recorded for the specified date and time.
TEN VALUES per REC			Data values are written on a new record with up to 10 values specified per record; for more than 10, multiple records must be written. VALUE is either a positive (nnnnn) or a signed negative number (-nnnn). DP is decimal indicator, indicating number of digits to right of implied decimal point for value. A blank DP or a DP of "_" (underscore) indicates a missing value. A VALUE of 0 with a blank DP means no observation was recorded. Other VALUEs are interpreted as missing value codes. Refer to Appendix E. FLAG is a validity flag indicating that observed VALUE is exceptional; see Appendix F. NOTE: all values are to be reported in Central Standard Time.
VALUE	45*	I5,1x	
DP		A1,1x	
FLAG		A1,1x	
SEQUENCE NUMBER	145	I6	A sequence number for the records constituting a single complete sounding. This number can be used to maintain the individual records in the correct order.

VALIDITY FLAG CODES

CODE	DESCRIPTION
A	HIGH WINDS
B	STRATOSPHERIC OZONE INTRUSION
C	VOLCANIC ERUPTIONS
D	SANDBLASTING
E	FOREST FIRE
F	STRUCTURAL FIRE
G	HIGH POLLEN COUNT
H	CHEMICAL SPILLS & INDUST. ACCIDENTS
I	UNUSUAL TRAFFIC CONGESTION
J	CONSTRUCTION/DEMOLITION
K	AGRICULTURAL TILLING
L	HIGHWAY CONSTRUCTION
M	REROUTING OF TRAFFIC
N	SANDING/SALTING OF STREETS
O	INFREQUENT LARGE GATHERINGS
P	ROOFING OPERATIONS
Q	PRESCRIBED BURNING
R	CLEAN UP AFTER A MAJOR DISASTER
V	VALIDATED VALUE

The Department of the Interior Mission

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering sound use of our land and water resources; protecting our fish, wildlife, and biological diversity; preserving the environmental and cultural values of our national parks and historical places; and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to ensure that their development is in the best interests of all our people by encouraging stewardship and citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.

The Minerals Management Service Mission

As a bureau of the Department of the Interior, the Minerals Management Service's (MMS) primary responsibilities are to manage the mineral resources located on the Nation's Outer Continental Shelf (OCS), collect revenue from the Federal OCS and onshore Federal and Indian lands, and distribute those revenues.

Moreover, in working to meet its responsibilities, the **Offshore Minerals Management Program** administers the OCS competitive leasing program and oversees the safe and environmentally sound exploration and production of our Nation's offshore natural gas, oil and other mineral resources. The **MMS Royalty Management Program** meets its responsibilities by ensuring the efficient, timely and accurate collection and disbursement of revenue from mineral leasing and production due to Indian tribes and allottees, States and the U.S. Treasury.

The MMS strives to fulfill its responsibilities through the general guiding principles of: (1) being responsive to the public's concerns and interests by maintaining a dialogue with all potentially affected parties and (2) carrying out its programs with an emphasis on working to enhance the quality of life for all Americans by lending MMS assistance and expertise to economic development and environmental protection.
