## INTRODUCTION

The data presented in this report were collected to satisfy, in part, the objectives of Mineral Management Service (MMS) contract number 14-35-0001-30619, "Distribution and Abundance of Marine Mammals in the North-Central and Western Gulf of Mexico." This program includes aerial, acoustic, visual, and hydrographic surveys, a sperm whale tagging and tracking program, and a remote sensing survey. The program involves the combined efforts of Texas A&M University at Galveston (TAMUG), Texas Institute of Oceanography (TIO), Texas A&M University at College Station (TAMU), the National Marine Fisheries Service (NMFS) at the Southeast Fisheries Science Center, and Oregon State University's Hatfield Marine Science Center. This MMS program, named GulfCet, is designed to ascertain the distribution, abundance, seasonality, and movement patterns of cetaceans along the continental slope from the Florida-Alabama border to the Texas-Mexico border between the 100 and 2000 meter isobaths.

The GulfCet program participates in four TAMU sponsored cruises per year, one cruise per season, for two of the three years of the contract period. These data were collected on the sixth TAMU GulfCet cruise, a twelve day summer cruise, August 27-September 7, 1993, aboard the Louisiana Universities Marine Consortium (LUMCON) ship, R/V *Pelican*. This cruise had a threefold purpose: a visual survey of marine mammals, a continuously recording acoustic survey, and a hydrographic survey. A transect consisting of twelve North-South track lines (Figure 1) was followed during the cruise. Track lines 1 and 2 were dropped from the station plan following a GulfCet cruise evaluation. The stations were sampled in reverse order, beginning with line 14, station 143.

Data from the hydrographic survey are presented in this report. Requests for data should be sent to the Minerals Management Service at the Gulf of Mexico Regional OCS Office in New Orleans, or via Dr. Giulietta Fargion, GulfCet DMO, TAMUG, Galveston, Texas, (OMNET/ G. Fargion). The data in this report are available in digital form.

## STANDARD PROCEDURES

Data in this report were obtained with CTD lowerings, rosette casts, and XBT deployments. Sea-Bird Electronics SBE 9 Plus CTD was used on this cruise, and lowered to the sea floor, or to a maximum depth of 800 m. Spartron of Canada XBT probes, hardware, and software, along with Sippican's XBT launcher were also used. A rosette holding 12 5-liter Niskin bottles was lowered with the CTD.

### *Expendable Bathythermograph (XBT) Data:*

XBT's (Appendix A, Table 1) were launched at the depths of 200, 350, 500, 800, 1000, and 1500 meters along each track line, using T-7, T-10, and T-20 XBT probes.

### *Conductivity/Temperature/Depth (CTD) Data:*

CTD stations (see Appendix A, Table 2) were located at the 100 and 2000 m isobaths (except at the Mexican border), and at 40 nautical mile intervals along each track line. Vertical profiles of salinity, temperature, oxygen, and beam attenuation coefficient (transmissometry) were measured at every station. At stations less than 500 m, in situ fluorescence was also measured. Due to time constraints, no CTD casts were made on track line 3, but XBT's were deployed at the CTD station positions along this track line.

The CTD temperature, pressure, dissolved oxygen, and conductivity sensors are calibrated semi-annually at Sea-Bird Electronics.

### *Rosette Cast Data:*

The rosette was lowered with the CTD at all designated stations. The bottles were closed on the upcast, and twelve water samples were collected at each station. Chlorophyll samples were taken from either

six or twelve of the Niskin bottles, depending upon the CTD station. A salinity sample was taken from each bottle at the following stations: 04-033, 05-050, 06-059, 06-054, 07-073, 08-076, 09-093, 10-097, 11-112, 12-116, 13-133, and 14-135.

Salinity samples were analyzed at TAMU, using a Guildline Conductivity Coupled Salinometer (model number 8400A). The Salinometer was standardized with Wormley Standard Seawater. Salinity values are reported to four decimal places.

Chlorophyll samples were filtered on board and kept under liquid nitrogen until return to shore. The chlorophyll data are not presented in this report, but will be reported in a later technical report.

## TABULATED DATA

The "start time" for hydrographic casts is Central Standard Time. Bottom depth was determined acoustically (DATA SONIC SBT 220), but in some cases the depth was estimated from bathymetric charts.

### *Expendable Bathythermograph (XBT) Data:*

Raw frequency data were processed with an in-house conversion program using Sparton's drop rates (Sparton of Canada, 1992). The processed XBT data were interpolated using a program developed at Scripps Institution of Oceanography. Interpolations are at 1 m steps, and data are listed at 10 m intervals. Probe failures occurred at stations 08-079, 09-091, and 14-138. Twenty five extra XBT probes were deployed at specific marine mammal sightings, or to delineate certain hydrographic features. The extra probes are listed by their corresponding track line number followed by EX. BL indicates that the probe was deployed between track lines. Five extra probes were deployed at specific marine mammal sightings. Four additional XBT's were deployed at the unsampled CTD stations on track line 3. Seventeen XBT probes were deployed to better define the Mississippi River plume, and to further define the boundaries of the Loop Current and various eddies. Most of these probes are listed with the letter B in their station designation.

### *Conductivity/Temperature/Depth (CTD) Data:*

CTD data are tabulated to "standard levels" (UNESCO, 1991). The CTD data were acquired at 24 Hz and processed using Sea-Bird's Seasoft software (version 4.015, Sea-Bird Electronics, 1992).

The following CTD data processing steps were used:

- |                     |  |
|---------------------|--|
| 1. DATCNV           | Converts raw data to binary engineering units and stores data in CNV files.  |
| 2. SPLIT            | Splits the CNV files into upcast and downcast files.   |
| 3. WILDEDIT         | Checks for and marks 'wild' data points.   |
| 4. FILTER           | Filters data columns to produce zero phase time shifts.  |
| 5. ALIGNCTD         | Aligns specific temperature, conductivity, and oxygen measurements with their corresponding pressure measurement.  |
| 6. In-house program | Converts temperature to ITS-90 scale (UNESCO, 1991).   |
| 7. CELLTM           | Removes conductivity cell thermal mass effects from conductivity data.   |
| 8. LOOPEDIT         | Marks the scan where CTD is moving less than the minimum velocity or traveling backwards due to ship roll.   |
| 9. DERIVE           | Computes dissolved oxygen and depth.   |
| 10. BINA VG         | Averages the data into 1 m. depth bins.  |
| 11. DERIVE          | Computes salinity (PSS-78), density (EOS80), potential temperature (Pot. Temp), specific volume anomaly (SVA), and sound velocity (Chen-Millero) using Fofonoff and Millard's (1983) formulas. |

No data corrections were made. The temperature sensor as well as the conductivity sensor were calibrated prior to this cruise at Sea-Bird Electronics. On April 21, 1993, a drift of 0.00328 was obtained for the temperature sensor. A drift of 0.00015 was detected for the conductivity sensor on August 5, 1993.

Station positions for the processed CTD data indicate actual occupied positions. Figure 2 (Appendix B) shows a CTD versus XBT temperature comparison for CTD station 04-033 and for an XBT deployed at that same station.

Column headings and units for the tabulated CTD data are as follows:

<u>Depth</u>	Depth	m
<u>Temp</u>	Temperature	°C
<u>Pot. Temp</u>	Potential Temperature	°C
<u>Salinity</u>	Salinity	PSU
<u>Density</u>	Density	kg/m <sup>3</sup>
<u>SVA</u>	Specific Volume Anomaly	10 <sup>-8</sup> m <sup>3</sup> /kg
<u>Sound V</u>	Sound Velocity	m/s
<u>Oxy</u>	Oxygen	mg/l
<u>Fluor.</u>	Fluorescence	v
<u>Pressure:</u>	Pressure	db

**Temperature Data:**

The processed XBT data were calibrated against the CTD cast data. Scatter plots were made of the CTD depth and XBT depth difference (for the compared isotherm) versus XBT isotherm depth (Singer, 1990). The first order empirical fit was  $y=0.047x - 2.9$ . A depth adjustment was made in the data to compensate for the fact that XBT isotherms were shallower than CTD isotherms.

The temperature profiles and isotherm maps were plotted using this corrected temperature data and were all generated with *Surfer* software (version 4, Golden Software, Inc.).

**Rosette Cast Data:**

Salinity data were computed using the recommended Joint Panel on Oceanographic Tables and Standards (JPOTS) formula (UNESCO, 1991). The surface salinity contour map was generated with *Surfer* software (version 4, Golden Software, Inc.) from CTD salinity data. Figure 3 of Appendix B is a plot of the CTD salinity values versus those obtained from Niskin water samples at the same stations. The difference between the Niskin bottle salinity values and the CTD values is plotted versus depth in Figure 4 (Appendix B).

The mean and standard deviation for the Niskin bottle salinities and CTD salinities are as follows:

Mean Niskin bottle salinity: 35.7264	Mean CTD salinity: 35.7152
Niskin bottle standard deviation: 1.0692	CTD standard deviation: 1.1017

### The Department of the Interior Mission

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering sound use of our land and water resources; protecting our fish, wildlife, and biological diversity; preserving the environmental and cultural values of our national parks and historical places; and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to ensure that their development is in the best interests of all our people by encouraging stewardship and citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.

### The Minerals Management Service Mission

As a bureau of the Department of the Interior, the Minerals Management Service's (MMS) primary responsibilities are to manage the mineral resources located on the Nation's Outer Continental Shelf (OCS), collect revenue from the Federal OCS and onshore Federal and Indian lands, and distribute those revenues.

Moreover, in working to meet its responsibilities, the **Offshore Minerals Management Program** administers the OCS competitive leasing program and oversees the safe and environmentally sound exploration and production of our Nation's offshore natural gas, oil and other mineral resources. The MMS **Minerals Revenue Management** meets its responsibilities by ensuring the efficient, timely and accurate collection and disbursement of revenue from mineral leasing and production due to Indian tribes and allottees, States and the U.S. Treasury.

The MMS strives to fulfill its responsibilities through the general guiding principles of: (1) being responsive to the public's concerns and interests by maintaining a dialogue with all potentially affected parties and (2) carrying out its programs with an emphasis on working to enhance the quality of life for all Americans by lending MMS assistance and expertise to economic development and environmental protection.
