INTRODUCTION

The data presented in this report were collected to satisfy, in part, the objectives of Mineral Management Service (MMS) contract number 14-35-0001-30619, "Distribution and Abundance of Marine Mammals in the North-Central and Western Gulf of Mexico". This program includes aerial, acoustic, visual, and hydrographic surveys, a sperm whale tagging and tracking program, and a remote sensing survey. The program involves the combined efforts of Texas A&M University at Galveston (TAMUG), Texas Institute of Oceanography (TIO), Texas A&M University at College Station (TAMU), the National Marine Fisheries Service (NMFS) at the Southeast Fisheries Science Center, and Oregon State University's Hatfield Marine Science Center. This MMS program, named GulfCet, is designed to ascertain the distribution, abundance, seasonality, and movement patterns of cetaceans along the continental slope from the Florida-Alabama border to the Texas-Mexico border between the 100 and 2000 meter isobaths.

The GulfCet program participates in four TAMU sponsored cruises per year, one cruise per season, for two of the three years of the contract period. These data were collected on the second TAMU GulfCet cruise, a fourteen day summer cruise, August 10-24, 1992, aboard the Louisiana Universities Marine Consortium (LUMCON) ship, R/V *Pelican*. This cruise had a threefold purpose: a visual survey of marine mammals, a continuously recording acoustic survey, and a hydrographic survey. A transect consisting of fourteen North-South track lines (Figure 1) was followed during the cruise. Due to inclement weather, track line one was not done on this cruise. The stations were surveyed in reverse order, beginning with station 143 on track line fourteen.

Data from the hydrographic survey are presented in this report. Requests for data should be sent to the Minerals Management Service at the Gulf of Mexico Regional OCS Office in New Orleans, or via Dr. Giulietta Fargion, GulfCet DMO, TAMUG, Galveston, Texas, (OMNET/ G. Fargion). The data in this report are available in digital form.

STANDARD PROCEDURES

Data in this report were obtained with CTD lowerings, rosette casts, XBT deployments, and LUMCON's continuously recording proprietary system, Multiple Interface Data Acquisition System (MIDAS) (Walser, et al., 1992). Sea-Bird Electronics SBE 9 CTD was used on this cruise, and lowered to the sea floor, or to a maximum depth of 1000 m. Sparton of Canada's XBT probes, with Sippican's XBT launcher and MK-12 hardware and software, were used. A rosette holding 12 5-liter Niskin bottles was lowered with the CTD.

Expendable Bathythermograph (XBT) Data:

XBT's (Appendix A, Table 1) were launched at the depths of 200, 350, 500, 800, 1000, and 1500 meters along each track line, using T-7, T-10, and T-20 XBT probes. Four additional T-7 XBT's were launched at specific marine mammal sightings.

Conductivity/Temperature/Depth (CTD) Data:

CTD stations (see Appendix A, Table 2, which shows desired station positions) were located at the 100 and 2000 m isobaths (except at the Mexican border), and at 40 nautical mile intervals on each track line. Vertical profiles of salinity, temperature, oxygen, and beam attenuation coefficient (transmissometry) were measured at every station. At stations less than 500 m., in situ fluorescence was also measured. CTD station 12-119 was canceled due to inclement weather, and a XBT was launched instead.

LUMCON's Sea Tech, Inc., fluorometer (500 m.) was replaced at station 03-021 (due to suspected electrical problems) with TAMUG's Sea Tech fluorometer (500 m.), model 204. Data from LUMCON's Sea Tech, Inc., transmissometer (5 cm. path) are not presented here due to thermal effects, or suspected instrument pressure problems. Readout values increased (>15%) at depths greater than 250 m.

The CTD temperature, oxygen, and conductivity sensors on LUMCON's SBE 9 CTD are calibrated annually at Sea-Bird Electronics. Pre- and post-cruise calibrations were not provided by LUMCON.

Continuous Recording Data:

A continuous recording of navigation data, surface hydrographic data (salinity, temperature, fluorescence, light transmission, and sea water flow rate), meteorological data (wind speed, wind direction, air temperature, barometric pressure, and solar irradiance) were collected with the MIDAS system. The MIDAS system sampling rate is an average of every fifteen seconds. This system uses a Sea-Bird Electronics' temperature sensor, and a Sea Tech, Inc., fluorometer and transmissometer. The conductivity-temperature meter on the MIDAS is calibrated annually at Sea-Bird Electronics.

Rosette Cast Data:

The rosette was lowered with the CTD at all designated stations. The bottles were closed on the upcast, and twelve water samples were taken at each station. A salinity sample was taken from the shallowest and deepest bottle. For stations on track lines 4, 8, 9, 10, 11, 12, 13, and 14 that were 100 m. in depth, water samples were taken at depths of 0, 5, 15, 20, 30, 40, 50, 60, 70, and 80 m. For all other stations on these track lines, the sampling depths were 0, 10, 20, 30, 40, 55, 70, 85, 100, 125, and 150 m. Due to insufficient chlorophyll filters, water samples were taken at depths of 0, 10, 25, 50, 75, and 100 m. for stations on track lines 2, 3, 5, 6, and 7 that were greater than 500 m. For stations on these five track lines that were less than 500 m. in depth, samples were taken for salinity only. In situ fluorometric measurements provided chlorophyll data for stations less than 500 m. on these five track lines.

Salinity samples were analyzed at TAMU, using a Guildline Connectively Coupled Salinometer (model number 8400A). The Salinometer was standardized with Wormley Standard Seawater. The salinity samples taken at the surface at station 11-115, and 721.6 m at station 10-100, were lost due to sample bottle breakage. Chlorophyll sample data are not included in this report. These data will be included in a subsequent technical report.

TABULATED DATA

The "start time" for hydrographic casts is Central Standard Time. Bottom depth was determined acoustically (DATA SONIC SBT 220), but in some cases the depth was estimated from bathymetric charts.

Expendable Bathythermograph (XBT) Data:

Raw frequency data were processed with an in-house conversion program using Sparton's drop rates (Sparton of Canada, 1992). No data are shown for stations 05-048, 06-061, 11-108, and 14-138 due to probe failure. The processed XBT data were interpolated using a program developed at Scripps Institute of Oceanography. Interpolations are at 1 m. steps, and data are listed at 10 m. intervals. The 20° C isotherm and temperatures at 100 m. are shown in Table 3 of Appendix A, using data taken from XBT's. Figure 2 of Appendix B shows a plot of the temperature values taken from the MIDAS versus those taken from the XBT's at near surface depths.

Conductivity/Temperature/Depth (CTD) Data:

CTD data are tabulated to "standard levels" (UNESCO, 1991). The CTD data were acquired at 24 Hz and processed using Sea-Bird's Seasoft software (version 4.015, Sea-Bird Electronics, 1992).

The following CTD data processing steps were used:

- | | |
|---------------------|--|
| 1. DATCNV | Converts raw data to binary engineering units and stores data in CNV files. |
| 2. SPLIT | Splits the CNV files into upcast and downcast files. |
| 3. WILDEDIT | Checks for and marks 'wild' data points. |
| 4. FILTER | Filters data columns to produce zero phase time shifts. |
| 5. ALIGNCTD | Aligns specific temperature, conductivity, and oxygen measurements with their corresponding pressure measurement. |
| 6. In-house program | Converts temperature to ITS-90 scale (UNESCO, 1991). |
| 7. CELLTM | Removes conductivity cell thermal mass effects from conductivity data. |
| 8. LOOPEDIT | Marks the scan where CTD is moving less than the minimum velocity or traveling backwards due to ship roll. |
| 9. DERIVE | Computes dissolved oxygen and depth. |
| 10. BINAVG | Averages the data into 1 m. depth bins. |
| 11. DERIVE | Computes salinity (PSS-78), density (EOS80), potential temperature (Pot. Temp), specific volume anomaly (SVA), and sound velocity (Chen-Millero) using Fofonoff and Millard's (1983) formulas. Also computes dynamic height anomaly (Dyn Ht.). |

No data corrections were made due to the lack of pre- and post-cruise calibration of the CTD. Figure 3 (Appendix B) shows a plot for CTD sea surface temperature versus MIDAS sea surface temperature. Figure 4 (Appendix B) shows a CTD versus XBT temperature comparison (0 to 300 m. range; the XBT station to CTD cast proximity was 2 nautical miles). Station positions for the processed CTD data indicate actual occupied positions.

Column headings and units for the tabulated CTD data are as follows:

<u>Depth</u>	Depth	m
<u>Temp</u>	Temperature	°C
<u>Pot. Temp</u>	Potential Temperature	°C
<u>Salinity</u>	Salinity	PSU
<u>Density</u>	Density	kg/m ³
<u>SVA</u>	Specific Volume Anomaly	10 ⁻⁸ m ³ /kg
<u>Dyn Ht</u>	Dynamic Height	dyn m
<u>Sound V</u>	Sound Velocity	m/s
<u>Oxy</u>	Oxygen	mg/l
<u>Fluor.</u>	Fluorescence	v
<u>Pressure</u>	Pressure	db

Continuous Recording Data:

The continuously recording data were processed with an in-house program which:

1. Cuts cruise track lines from the continuously recorded file.
2. Plots raw data with no corrections.

Salinity Data:

These data were computed using the recommended Joint Panel on Oceanographic Tables and Standards (JPOTS) formula (UNESCO, 1991). Values are reported to four decimal places. The data from station 02-015 , depth 499.5 m., indicate an anomalous value for the Niskin bottle salinity. Station 11-106, depth 0.3 m., also shows anomalous values for both bottle and CTD salinities. Figure 5 of Appendix B is a plot of the salinity values obtained with the CTD versus those obtained from Niskin water samples. Figure 6 (Appendix B) shows a plot of the sample depth versus salinity difference between Niskin bottle and CTD values.

APPENDIX B:
TEMPERATURE AND SALINITY

Figure 2. Temperature Values (°C) : XBT (at 1.29 m) versus MIDAS (~ 1.00 m)

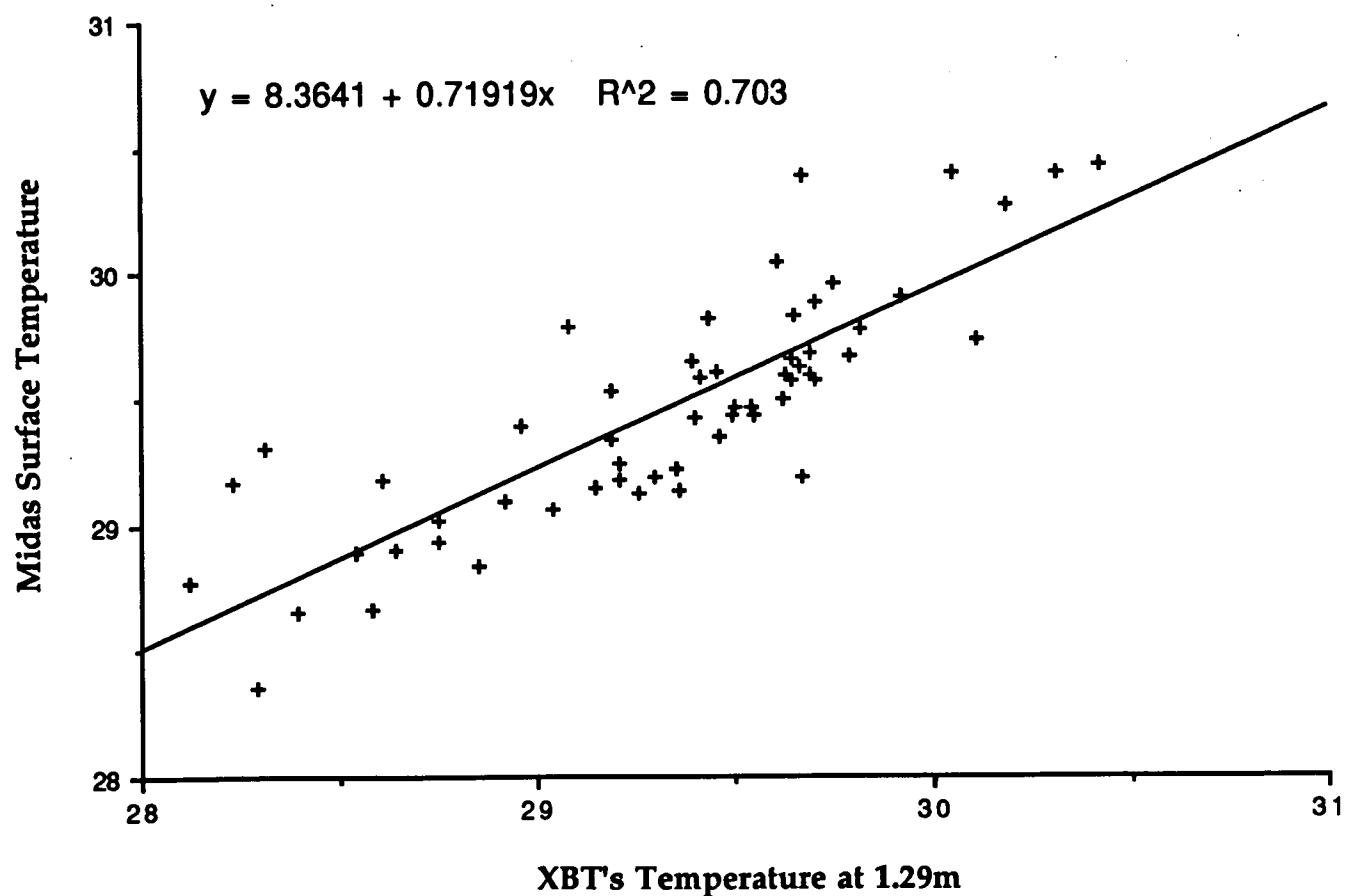

Figure 3. Sea Surface Temperature Values (°C) : CTD versus MIDAS

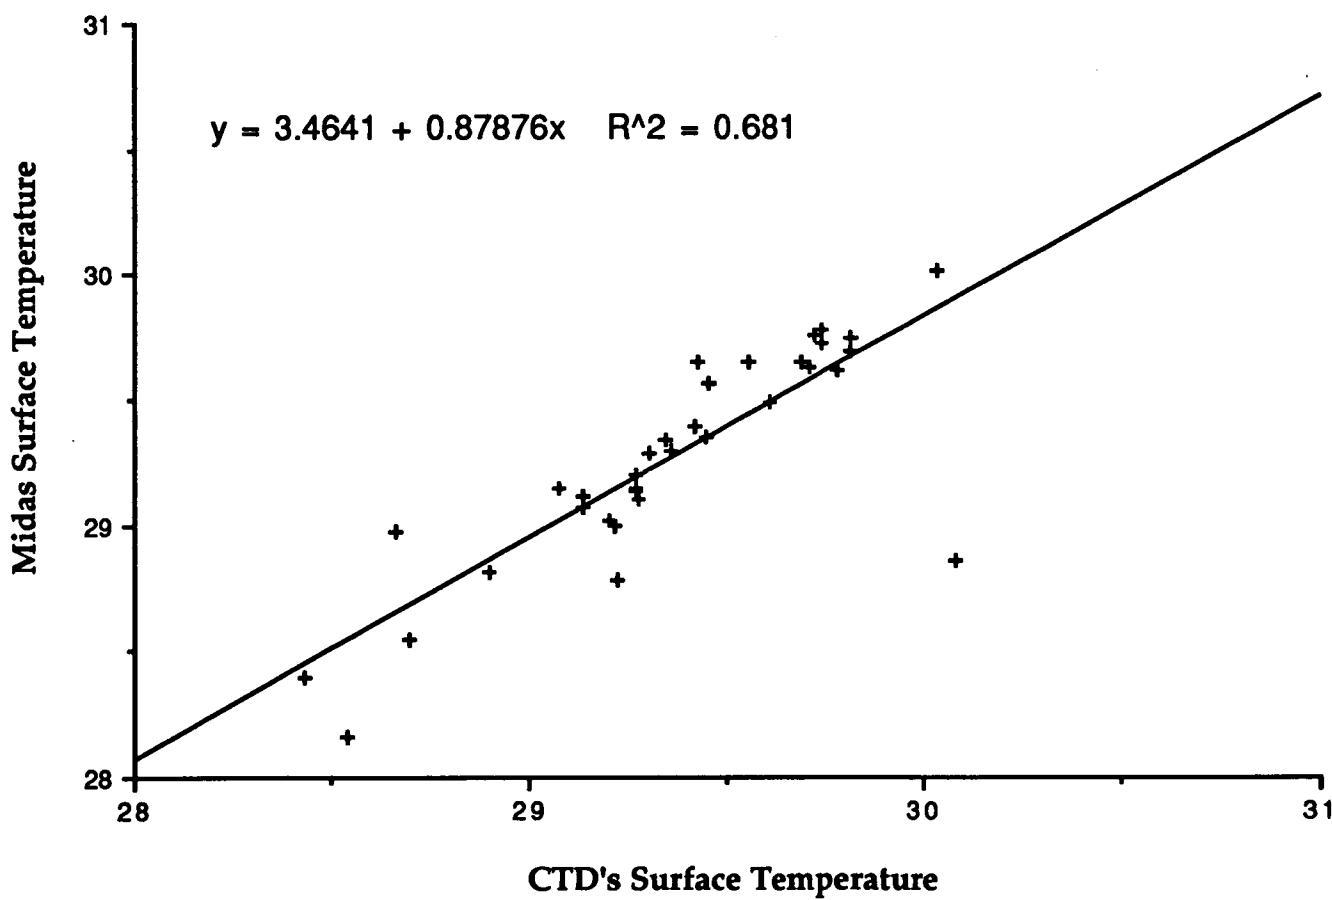

Figure 4. Temperature values ($^{\circ}\text{C}$) : CTD versus XBT
(0-300 m temperature range with 2 mi proximity of XBT to CTD station)

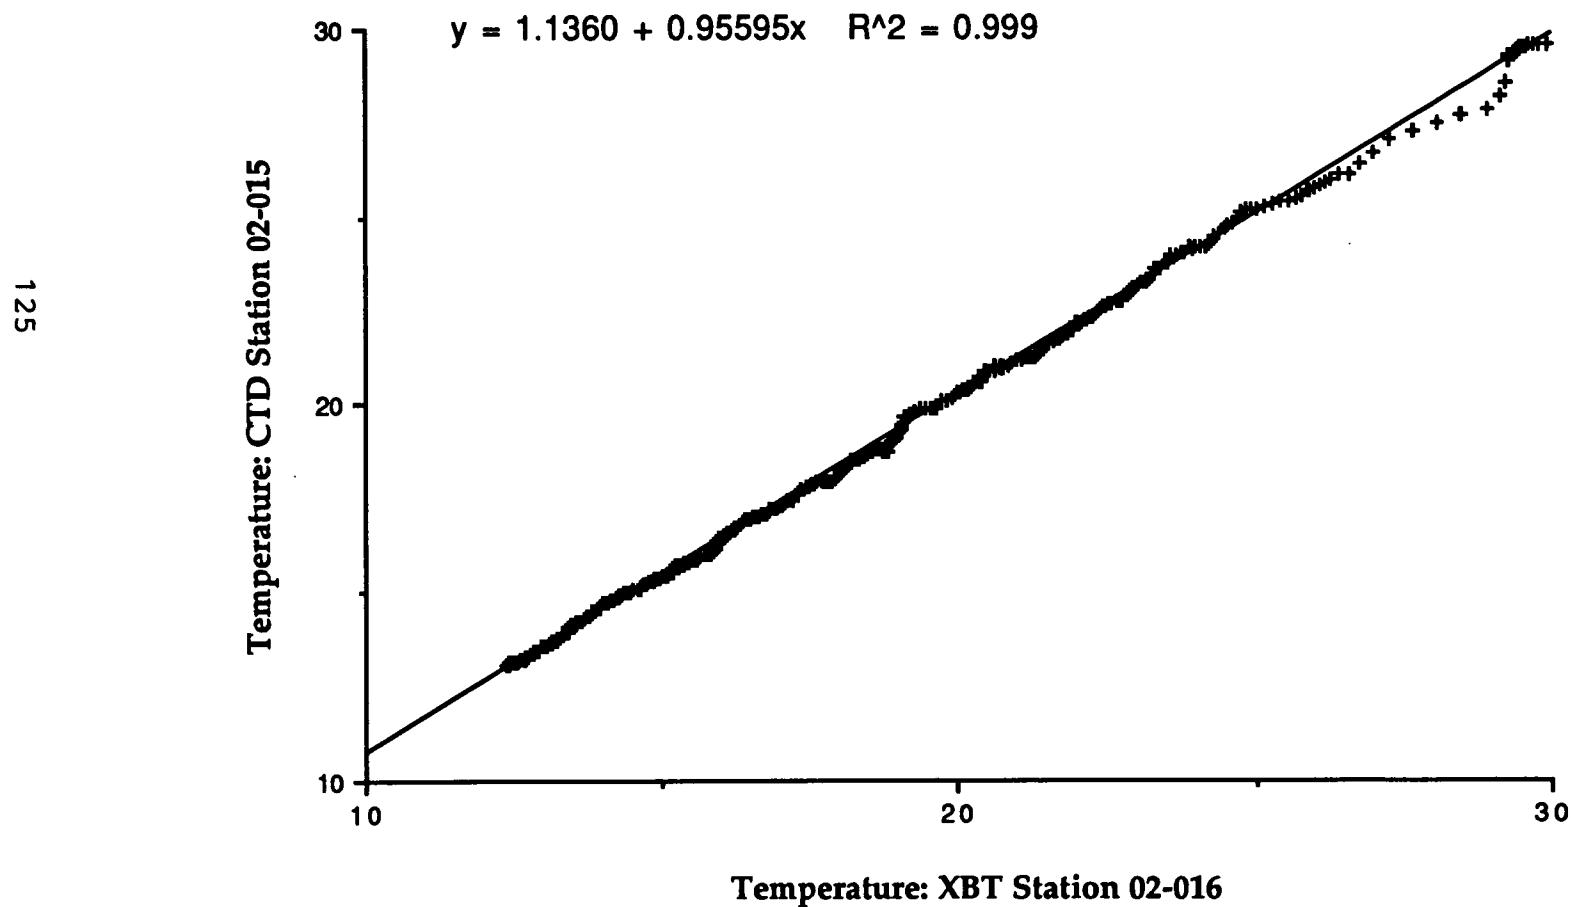

Figure 5. Bottle salinity versus CTD salinity

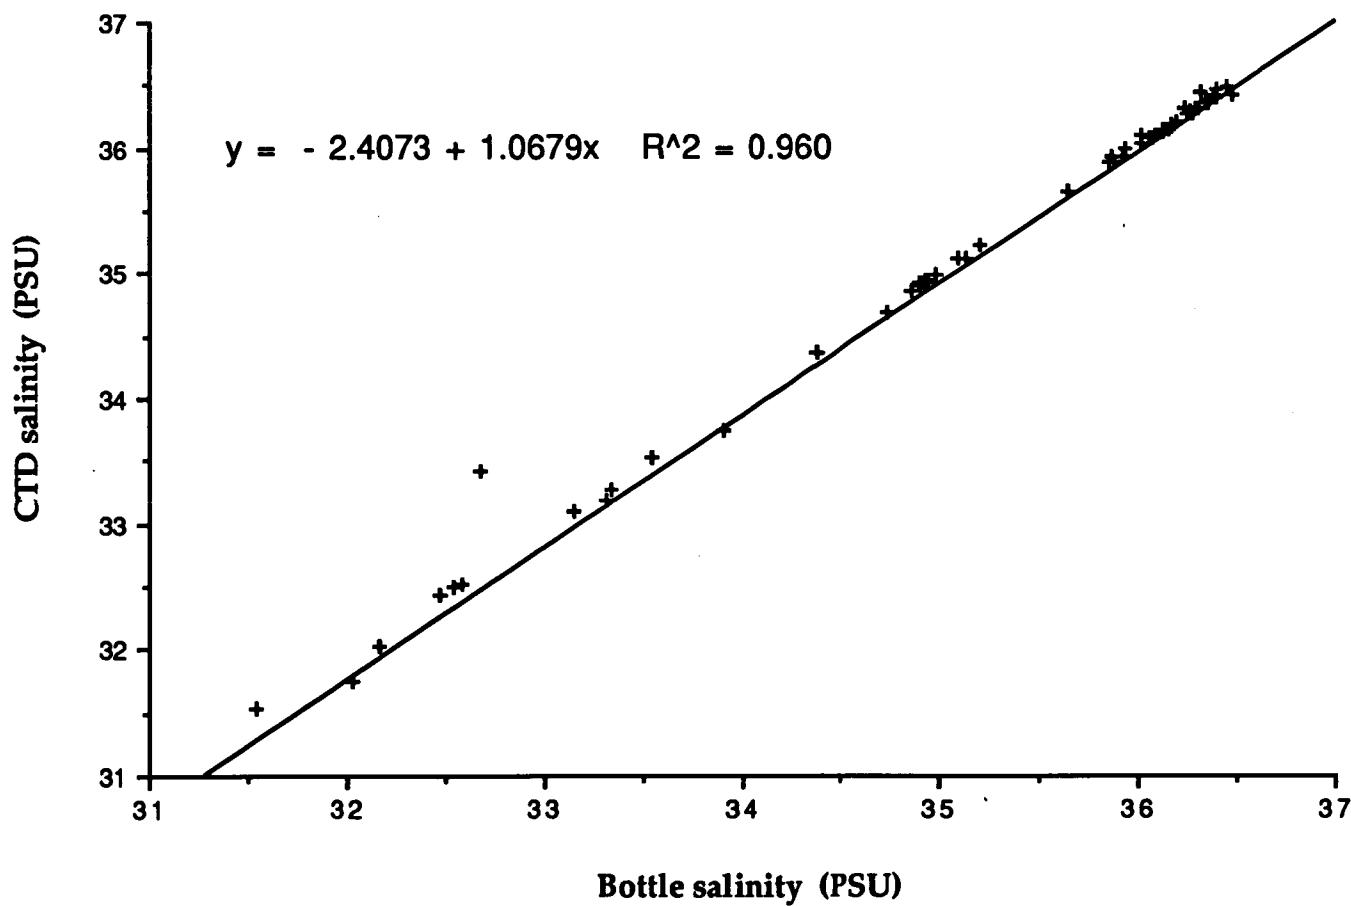

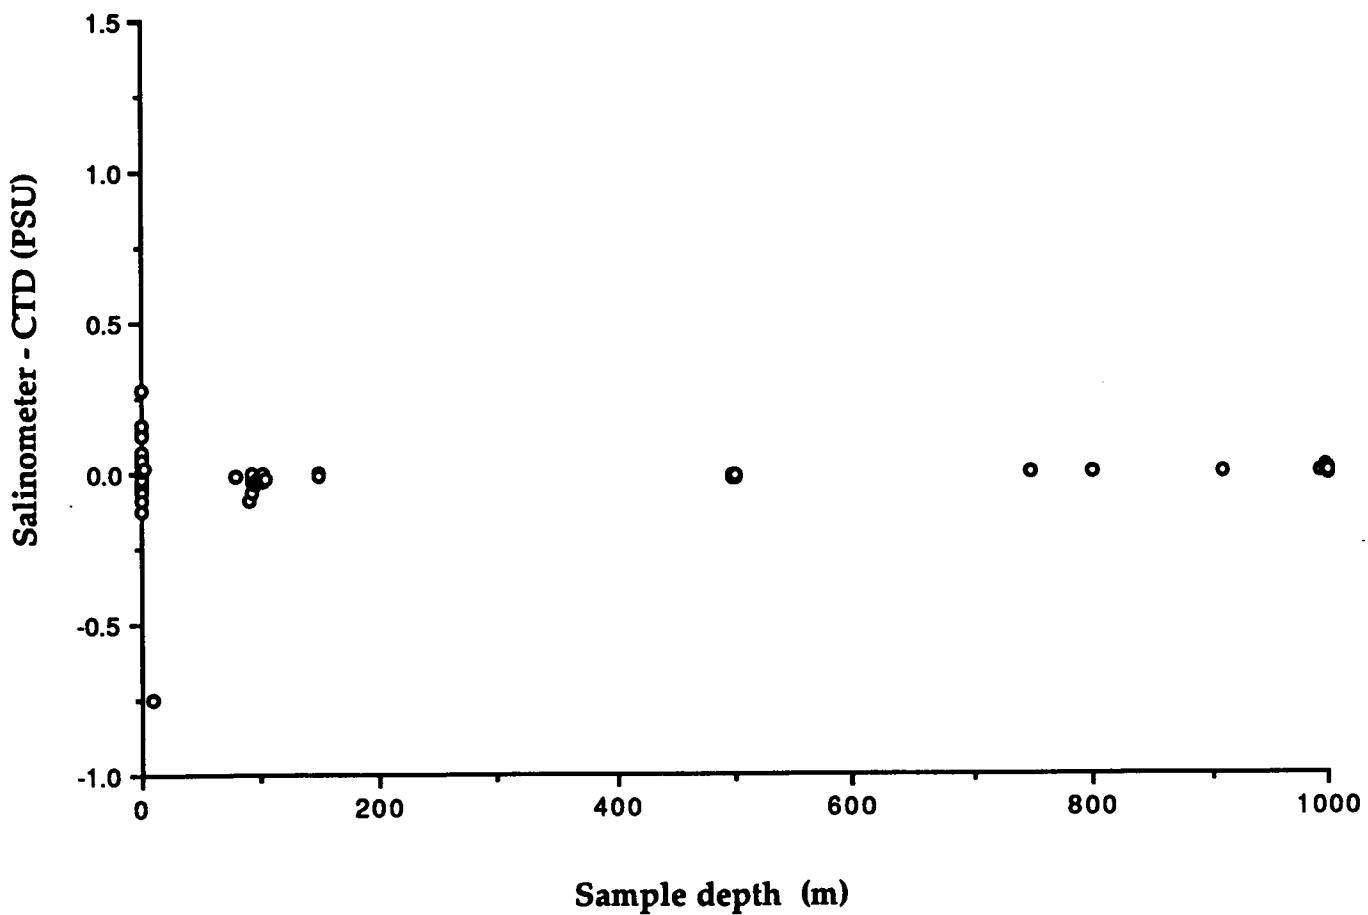

Figure 6. Sample depth versus difference between bottle and CTD salinity values

The Department of the Interior Mission

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering sound use of our land and water resources; protecting our fish, wildlife, and biological diversity; preserving the environmental and cultural values of our national parks and historical places; and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to ensure that their development is in the best interests of all our people by encouraging stewardship and citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.

The Minerals Management Service Mission

As a bureau of the Department of the Interior, the Minerals Management Service's (MMS) primary responsibilities are to manage the mineral resources located on the Nation's Outer Continental Shelf (OCS), collect revenue from the Federal OCS and onshore Federal and Indian lands, and distribute those revenues.

Moreover, in working to meet its responsibilities, the **Offshore Minerals Management Program** administers the OCS competitive leasing program and oversees the safe and environmentally sound exploration and production of our Nation's offshore natural gas, oil and other mineral resources. The MMS **Minerals Revenue Management** meets its responsibilities by ensuring the efficient, timely and accurate collection and disbursement of revenue from mineral leasing and production due to Indian tribes and allottees, States and the U.S. Treasury.

The MMS strives to fulfill its responsibilities through the general guiding principles of: (1) being responsive to the public's concerns and interests by maintaining a dialogue with all potentially affected parties and (2) carrying out its programs with an emphasis on working to enhance the quality of life for all Americans by lending MMS assistance and expertise to economic development and environmental protection.
