BRIEF DESCRIPTION OF CRUISE AND SCIENTIFIC GOALS

Research in support of the NSF Program "Physicochemical Processes Controlling Thorium Behavior in the Ocean"(RF-6673) was conducted with a shipboard science party of 21 persons, made up of Chief Scientist P.H. Santschi, 3 undergraduate students and 3 graduate students from TAMU-G's Marine Science/Oceanography Department, 6 graduate students from TAMU's Dept. of Oceanography, 2 guest scientists from Lamar University, 4 members of TAMU Dept. of Oceanography's Technical Group, and 2 deck engineers.

Cruise 92G-03 departed Galveston at 9 pm on March 15, and returned to Galveston at 6:30 pm on March 20, 1992. The principal science programs were interdisciplinary, with goals to:

- 1) Carry out large-volume sampling of Th, Ra and Pb isotopes using the Multiple InSitu Pumping System, MIPS, which allows battery-operated in situ pumping at up to six user-selectable depths (six times three serially linked cartridges extracting suspended particles and dissolved radioisotopes),
- 2) Verify MIPS with independent techniques using Fe hydroxide precipitation and MnO₂ impregnated acrylic fiber extractions of 100-200 liter of seawater, sampled from surface waters with a shipboard pump, and for water below the the surface with the CTD-Rosette,
- 3) Carry out large-volume ultrafiltration of 200 liters of seawater using water sampled for surface water with a shipboard pump, and for water below the the surface with the CTD-Rosette,
- 4) Collection of samples for measurements of suspended particle concentrations, DOC, dissolved oxygen, nutrients, chlorophyll a, pigments, and salinity, using the CTD/Rosette (30 L),
- 5) Collection of phytoplankton and zooplankton tows,
- 6) Collection of samples for coccolyth analysis,

The cruise track followed a straight transect from Galveston across the shelf/slope until 1500 m water depth.

COLLABORATION WITH OTHER INSTITUTIONS

Dr. Tom Bianchi, collaborator in jointly funded projects, and Dr. R. Roller, both faculty members at Lamar University in Beaumont, TX, participated on this cruise for the collection of samples for pigment and biomarker analysis.

REMOTE SENSING DATA: SEA SURFACE TEMPERATURE MAPS

Although the weather in March 1992 was generally overcast and rainy, the Coastal Studies Institute at Louisiana State University was able to compile sea surface temperature data for 7 March (9 days prior to the departure of cruise 92G-02) and for 15 March (1 day prior to departure). The data are in the form of schematic maps, which were posted to the public domain Omnet bulletin board GULF.MEX. Both maps utilize Channel 4 AVHRR data from NOAA-11.

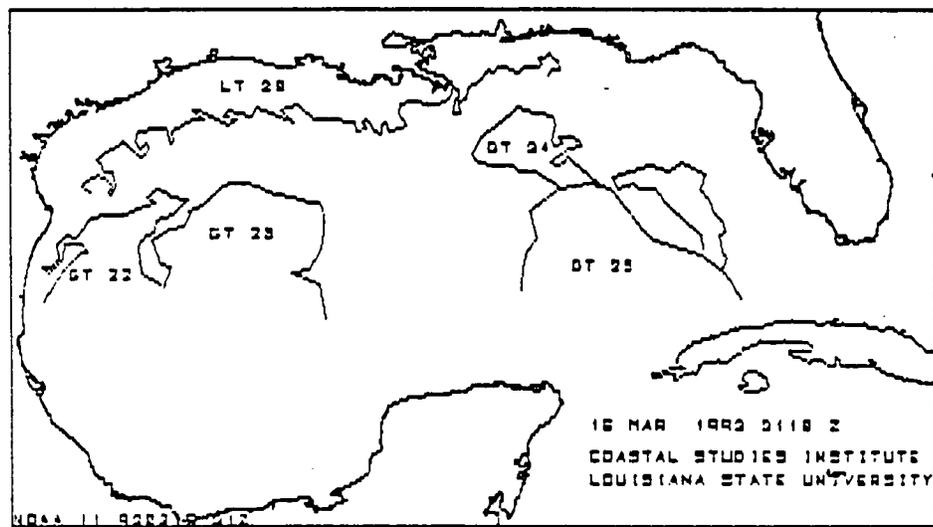

A third, somewhat more detailed Sea Surface Thermal Analysis which was prepared by NOAA-NESDIS for 5 April 1992 is included below. This map shows that surface temperatures 2 weeks after the cruise ranged from 18-21°C along 95°W.

f9203071.dat

f9203151.dat

CTD DATA

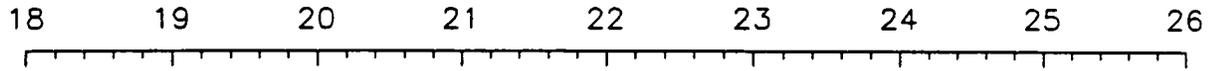

Temperature and salinity were profiled with a Seabird SBE-09 CTD to which a SeaTech model 025D 25-cm pathlength transmissometer was attached to profile transmissivity.

The following pages present plots of downcast temperature and salinity (and transmissometer) data, along with tables of downcast CTD and transmissometer data. No correction was made to the raw data CTD salinities, because these generally agreed to within ± 0.005 PSU with bottle salinities determined using our Guildline model 8400A conductive salinometer. Triangles superimposed on the (downcast) CTD salinity profiles present the (upcast) bottle salinity data. The CTD data have been 1 m averaged for casts at Stations 01-04 and for casts at Station 07, but they were 5 m averaged for casts at Stations 05 and 06 because the raw salinity data were unusually "noisy" at the latter stations. This noise (spiking artifacts) was due to a pump problem (a hose had been knocked loose) that went uncorrected until Station 07.

BOTTLE DATA

At each CTD station on cruise 92G-03, 30-liter Niskin bottles mounted on a General Oceanics 12-place rosette multisampler were tripped on the upcast for analysis of nutrients, dissolved oxygen, and chlorophyll + acid degradation products as well as bottle salinity. Autoanalyzer nutrient analyses were done at sea using a 6-channel Alpkem IWA-6 industrial water analyzer, and salinity was checked at each bottle trip depth in the shipboard laboratory with Guildline Autosal model 8400A. Dissolved oxygen was measured by a modified Winkler titration method. Chlorophyll versus phaeopigment composition was estimated at sea by the "Turner" fluorometric method, following the protocols of Parsons et al, 1985.

The following tables summarize temperature, salinity, nutrient, dissolved oxygen, and chlorophyll + phaeopigment concentrations. In the tables, Temp = CTD temp, and Salinity is bottle salinity (90G-15). Concentrations of nutrients are reported as moles/liter, of dissolved oxygen as mls/liter, and of chlorophyll and phaeopigments (PHAEO) as g/liter.

Reference:

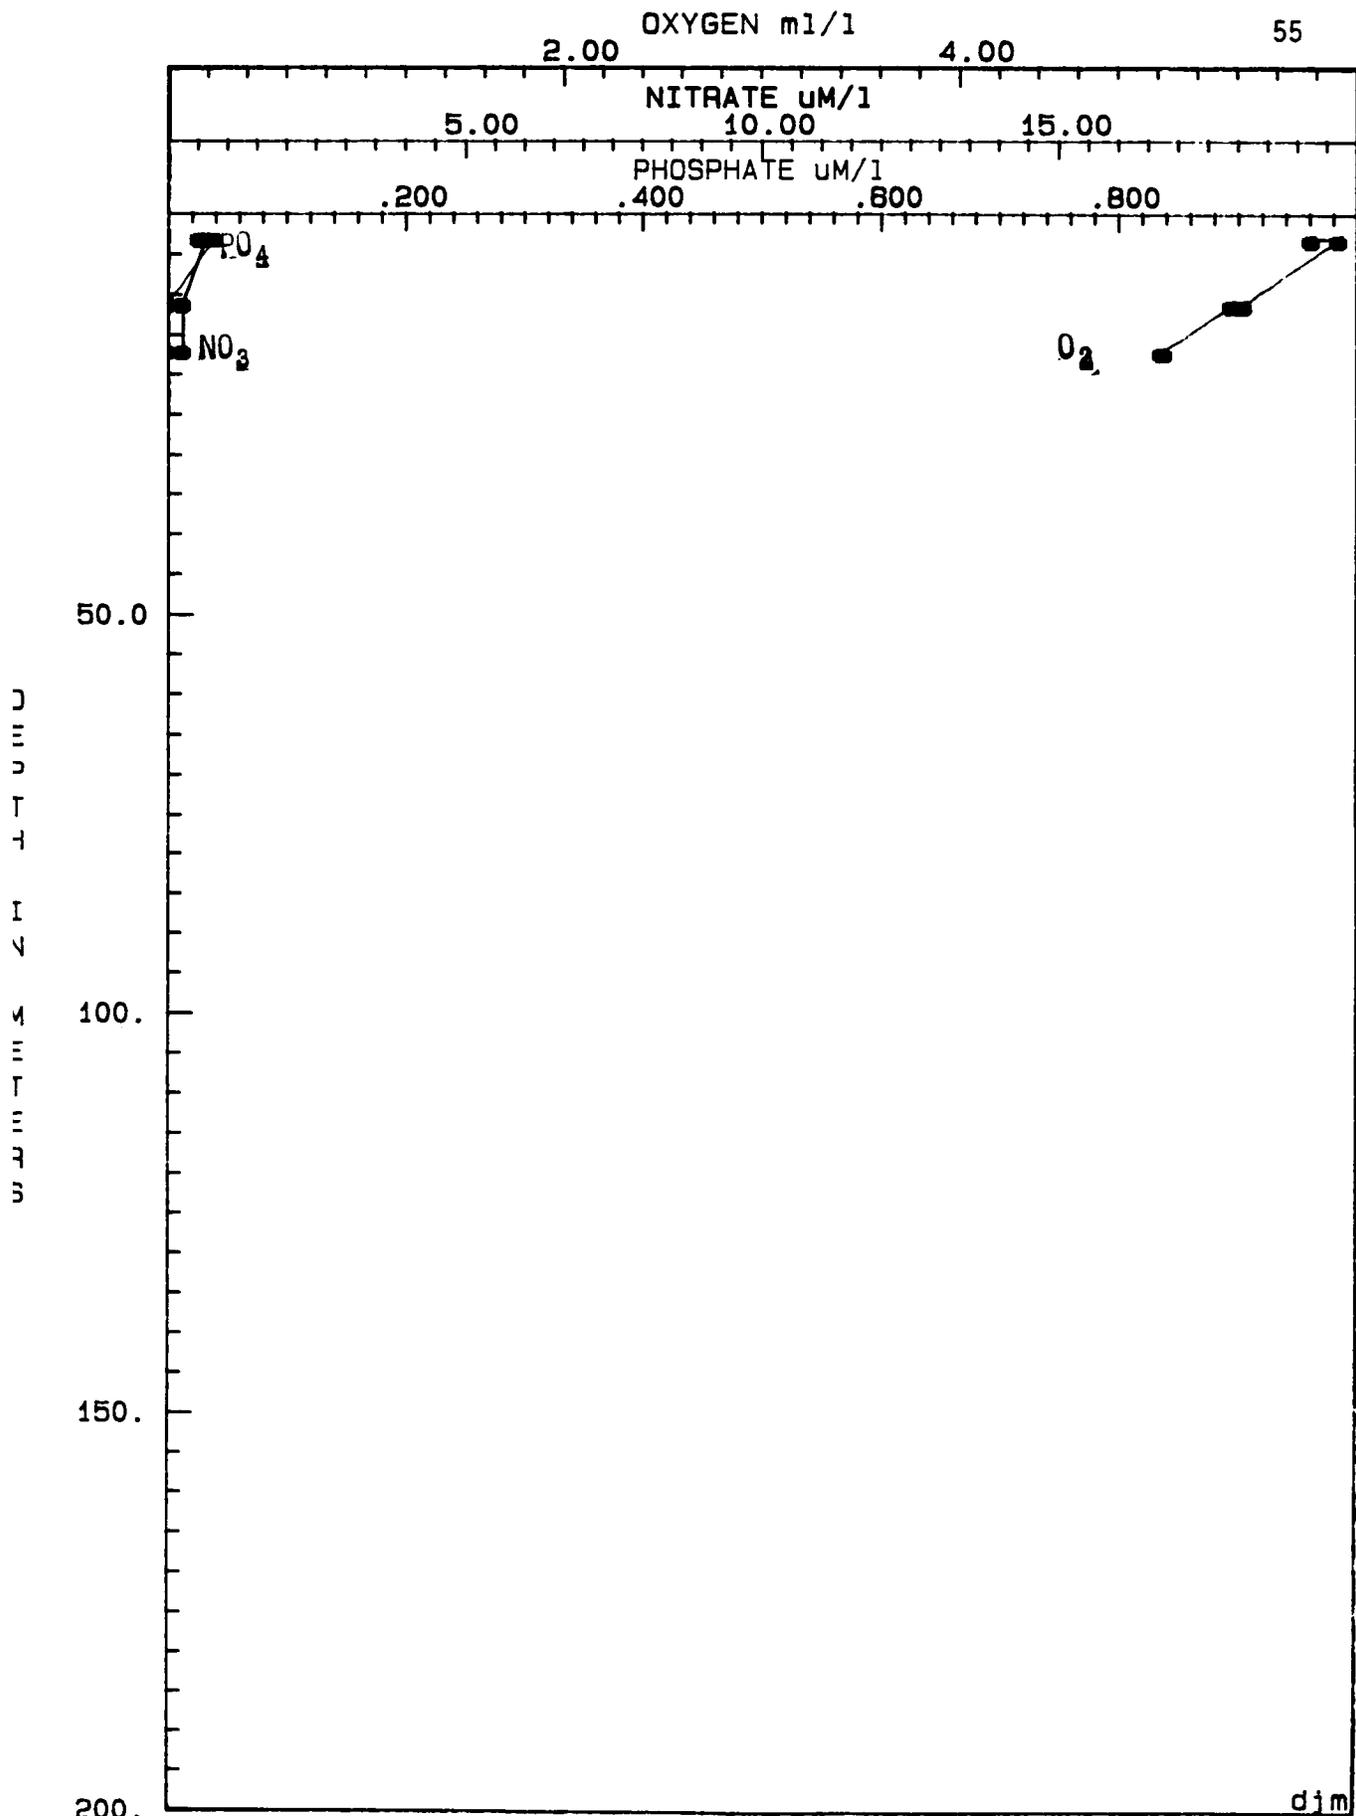

Parsons TR, Maita Y, and Lalli CM (1985) A Manual of Chemical and Biological Methods for Seawater Analysis. Oxford (Pergamon Press).

One liter (or 500mls when concentrations of suspended particles were high) of seawater from each bottle depth was filtered onto 25 mm glass fiber GF/F filters. These were extracted in 10 ml of 90% acetone for 12h at 0°C, then centrifuged the extract for 5 min to clarify the supernatant before measuring fluorescence on a Turner Designs model 10.

UNDERWAY SAMPLING OVER THE INNER SHELF OFF GALVESTON

Samples for nutrient and chlorophyll analysis were drawn every 15 minutes from a flow-through line in GYRE's main lab on the night of 16 March, from 03:00 GMT to 07:45 GMT while GYRE was underway from Pelican Island in Galveston Bay to Station 01. This series of 20 samples, which were analyzed on board ship, show that nutrient and chlorophyll concentrations decreased sharply from inside Galveston Bay to the inner continental shelf of the Gulf of Mexico, but they also show that chlorophyll and most other nutrient concentrations increased again seaward of 29° 02' N. Within this region of increase in chlorophyll and nutrient concentrations, the surface salinity decreased from 28.8 PSU (sample 13) to 25.3 PSU (sample 20) before rising again to 25.9 PSU at Station 01 (CTD at $z = 2\text{m}$). Temperature also decreased within this frontal zone, falling from 20.6°C (sample 13) to 19.5°C (sample 20) to a local low of 17.8°C at Station 01 (CTD at $z = 2\text{m}$).

In summary, the zone of anomalously low salinity/high chlorophyll/high nutrient water extended from about 15 miles north of Station 01 to about midway between Stations 01 and 02. However, even though the temperature at the inshore edge of the cold water zone at 29° 02' N was almost 2°C warmer than was the surface temperature at Station 01, this inner shelf cold plume does not show up in the remotely-sensed sea surface temperature field summarized in the 7 March or 16 March AVHRR sea surface temperature maps that are presented elsewhere in this report.

GALVESTON BAY SAMPLING

The week prior to GYRE cruise 92G-03, on 10 March 92 and again on 12 March 92, samples for salinity, nutrient, and chlorophyll analysis were also collected from various locations within Galveston Bay. Our colleagues Larry Griffin and Andy Landry and their students from Texas A&M University at Galveston sampled A) Dickinson Bayou, B) Highland Bayou Diversionary Canal, and C) Houston Ship Channel from small boats. These estuarine samples were filtered through GF/F filters and frozen for analysis on board GYRE during cruise 92G-03. Volumes filtered for most of these samples were 125 ml or 250 ml. However, concentrations of CHL and PHAEO that are reported in the summary tables which follow have been extrapolated to μg per liter (x8 or x4) so that they may be compared directly to the rest of the data in this report.

L. L. GRIFFIN and A. M. LANDRY

ACKNOWLEDGMENTS

This research was sponsored by the US National Science Foundation under grant OCE-9012103 (P. Santschi, Principal Investigator). NSF also provided support for shipboard technicians under grant OCE-9100233 (D. Biggs, PI) and 5 days of shiptime on R/V GYRE under grant OCE-9000343 (D. Letzring, PI). The preparation of this data report was supported by the Minerals Management Service, under Cooperative Agreement 14-35-0001-30501 for the sharing of ship-of-opportunity hydrographic data between Texas A&M University and MMS.

The Department of the Interior Mission

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering sound use of our land and water resources; protecting our fish, wildlife, and biological diversity; preserving the environmental and cultural values of our national parks and historical places; and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to ensure that their development is in the best interests of all our people by encouraging stewardship and citizen participation in their care. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.

The Minerals Management Service Mission

As a bureau of the Department of the Interior, the Minerals Management Service's (MMS) primary responsibilities are to manage the mineral resources located on the Nation's Outer Continental Shelf (OCS), collect revenue from the Federal OCS and onshore Federal and Indian lands, and distribute those revenues.

Moreover, in working to meet its responsibilities, the **Offshore Minerals Management Program** administers the OCS competitive leasing program and oversees the safe and environmentally sound exploration and production of our Nation's offshore natural gas, oil and other mineral resources. The MMS **Minerals Revenue Management** meets its responsibilities by ensuring the efficient, timely and accurate collection and disbursement of revenue from mineral leasing and production due to Indian tribes and allottees, States and the U.S. Treasury.

The MMS strives to fulfill its responsibilities through the general guiding principles of: (1) being responsive to the public's concerns and interests by maintaining a dialogue with all potentially affected parties and (2) carrying out its programs with an emphasis on working to enhance the quality of life for all Americans by lending MMS assistance and expertise to economic development and environmental protection.
