Cut Flowers and Greenery

Canadian Origin

TABLE 3-5: Canadian Origin Cut Flowers and Greenery

If:	Then:
Conifer ¹ Christmas trees or branches	GO to Table 3-6
Commercially produced wreaths or garlands	RELEASE
Other than a commodity listed in the three cells above	GO to Table 3-13

- 1 The term *conifer* refers to cone-bearing trees. Common examples include pine, fir, spruce, hemlock, and Douglas fir.

TABLE 3-6: Cut Christmas Trees or Branches

If:	Then:
A pine species (for example, white pine, Scotch or Scots pine)	GO to Table 3-7
Not a pine species (for example, fir, spruce, hemlock, Douglas fir) ¹	GO to Table 3-12

- 1 Conifer branches from species **other than pine** and less than 15 mm (1/2 inch) in diameter are **exempt** from gypsy moth certification requirements and may be released.

TABLE 3-7: Cut Pine Christmas Trees or Branches¹

If from:	And:	Then:
New Brunswick or Nova Scotia		GO to Table 3-8
Ontario or Quebec		GO to Table 3-10
A province other than those listed above	All of the following requirements are met: 1. The trees are accompanied by a certification of origin ² stating that they were produced in an area of Canada where gypsy moth is not known to occur ³ 2. The trees are accompanied by a statement of origin and movement ⁴ that specifies the Canadian province where the trees originated and, if applicable, the province or provinces they were moved through, if different from the province of origin, and also states that: a. The trees originated in and were moved only through areas of Canada not considered to be infested with pine shoot beetle, as determined by the CFIA ³ , or b. The trees originated from a province not quarantined for pine shoot beetle and are moved through a province that is infested with pine shoot beetle during October, November, or December, or when ambient air temperature is below 10°C (50°F) (the shipment does not have to be covered or in an enclosed container). 3. The U.S. destination (including county and State) is plainly indicated on the trees or on the outer covering or container	RELEASE ⁵
	Lacks the documents and indication of destination described above	CONTACT CBP AS

- 1 Cut pine Christmas trees or branches of Canadian origin are subject to requirements for both gypsy moth and pine shoot beetle. Because the entry requirements are complex and are based on place of origin in Canada as well as place of destination in the U.S., determine the requirements for gypsy moth first, then determine the requirements for pine shoot beetle.
- 2 The certification of origin for gypsy moth is a signed, accurate statement certifying the area in which the trees were grown. The statement may be provided directly on the documents accompanying the tree shipment, or may be provided on a separate certificate. The certification does **not** require the signature of a CFIA inspector; exporters may sign the statement.
- 3 See [Appendix G](#).
- 4 The statement of origin and movement for pine shoot beetle may be printed directly on the documentation accompanying the shipment, or may be provided on a separate document. The certification does **not** require the signature of a CFIA inspector; exporters may sign the document.
- 5 If the trees are to be moved through an area of the U.S. quarantined for pine shoot beetle ([Appendix G](#)), en route to an area or areas in the U.S. not quarantined for pine shoot beetle during the period of January through September when the temperature is 10°C (50°F) or higher, then the trees must be shipped in an enclosed vehicle or completely covered (such as with plastic canvas, or other closely woven cloth) so as to prevent access by pine shoot beetle.

TABLE 3-8: Cut PINE Christmas Trees or Branches from New Brunswick or Nova Scotia – Gypsy Moth Requirements

If from:	And destined to:	And:	Then:
A Canadian area infested with gypsy moth ¹	The States of CT, DE, DC, MA, MD, MI, NH, NJ, NY, PA, RI, VT, or other areas in the U.S. infested with gypsy moth ^{1, 2}	→	GO to Table 3-9

If a flower or branch (stem) from:	And:	Then:
Almond (<i>Prunus</i> spp.), Apple (<i>Malus</i> spp.), Apricot (<i>Prunus</i> spp.), Cherry (<i>Prunus</i> spp.), Cherry laurel (<i>Prunus</i> spp.), Cotton (<i>Gossypium</i> spp.), Crabapple (<i>Malus</i> spp.), English laurel (<i>Prunus</i> spp.), Flowering quince (<i>Chaenomeles</i> spp.), Grape (<i>Vitis</i> spp.), Nectarine (<i>Prunus</i> spp.), Peach (<i>Prunus</i> spp.), Pear (<i>Pyrus</i> spp.), Prune (<i>Prunus</i> spp.), or Quince (<i>Cydonia</i> spp.)		PROHIBIT ENTRY
Other than a plant listed above	For personal use	INSPECT and RELEASE
	Commercial	INSPECT 5% of all cut flower shipments following directions in the Cut Flowers and Greenery Manual ^{1, 2} http://www.aphis.usda.gov/import_export/plants/manuals/ports/downloads/cut_flower_imports.pdf RELEASE other shipments ³

- 1 Cut flowers grown in Canada may enter the United States during all CBP hours of coverage.
- 2 Flower shipments selected for the required 5% inspection rate (the 5% inspection rate translates to approximately every 20th shipment) must be inspected and released by a CBP AS.
- 3 Outside of CBP AS hours of coverage the following criteria **must** be met:
 - ◆ **On a yearly basis**, provide CBP AS personnel, in each port of entry utilized, **one** of the following: a current copy of the NAFTA certificate of origin **or** a signed affidavit certifying cut flower shipments are of Canadian origin. Any updates/changes in the supplier list must be provided to CBP ASs as the changes occur.
 - ◆ **For each shipment**, provide CBP AS personnel **advance** notification. This advance notice must be provided on company fax letterhead and during the regular staffed hours of CBP AS. The advance notification must also provide the following information: estimated time of arrival, origin, and description of cut flower varieties (the description can be attached and may be in the form of an invoice).

Note: These requirements will allow the CBP AS to select shipments, entering outside of CBP AS regular staffed hours, in advance for inspection as needed. The CBP AS will also provide access to this information to local CBP officers so that CBP officers can determine if the importer has met the conditions listed above.

Plant

Fruits, Vegetables, and Herbs

Verified Canadian Origin

TABLE 3-15: Verified Canadian Origin Fruits, Vegetables, or Herbs

If:	Then:
Fresh fruits, vegetables, or herbs ¹	GO to Table 3-16
Frozen or dried fruits, vegetables, or herbs ¹	GO to Table 3-22
Preserved or cooked fruits, vegetables, or herbs ¹	GO to Table 3-24

- 1 Origin may be verified by thoroughly reviewing the documentation and the shipping containers of shipments presented for entry. It is important to note that fruits and vegetables, which were grown and harvested in other countries, may be identified as Canadian origin. Tropical fruits and vegetables, such as citrus, mangoes and avocados are not grown in Canada and are not Canadian origin. Also, fruits such as grapes, nectarines, peaches, plums, and sand pears presented for entry during winter months may not be of Canadian origin. The origin of these types of fruit is probably a country below the equator, for instance, Chile or South Africa.

Fruits and vegetables presented as from Canada may not necessarily have originated in Canada. Commodities entering Canadian commerce can be considered a product of Canada, however, this designation does not necessarily mean the product's origin is Canadian.

TABLE 3-16: Fresh Fruits, Vegetables, or Herbs of Verified Canadian Origin¹

If:	And:	Then:
<i>Arctostaphylos uva-ursi</i> (bearberry) leaves, <i>Hydrastis canadensis</i> (goldenseal) roots, <i>Lycopodium clavatum</i> (clubmoss) plants, <i>Menyanthes trifoliata</i> (bogbean) leaves, or <i>Panax quinquefolius</i> (North American ginseng) roots ¹	→	CONTACT CBP AS

	Not selected for referral	RELEASE

1 Origin may be verified by thoroughly reviewing the documentation and the shipping containers of shipments presented for entry. It is important to note that fruits and vegetables, which were grown and harvested in other countries, may be identified as Canadian origin. Tropical fruits and vegetables, such as citrus, mangoes and avocados are not grown in Canada and are not Canadian origin. Also, fruits such as grapes, nectarines, peaches, plums, and sand pears presented for entry during winter months may not be of Canadian origin. The origin of these types of fruit is probably a country below the equator, for instance, Chile or South Africa.

TABLE 3-17: Canadian Origin Fresh Alliaceous Vegetables

If:	And:	And:	Then:
Dry bulb ¹	Entire bulb	—————→	RELEASE
	Processed bulb (peeled and chopped)	—————→	
Fresh bulb (green parts present) and other plant parts ²	Entire bulb	Accompanied by a phytosanitary certificate issued by the Canadian Food Inspection Agency (CFIA) containing an additional declaration (AD) that the shipment is free from <i>Acrolepiopsis assectella</i>	PROHIBIT ENTRY
		Accompanied by a phytosanitary certificate issued by the CFIA lacking the above AD	
	Processed bulb (peeled and chopped)	Lacking the above phytosanitary certificate	—————→

- 1 Dry bulb refers to alliums which are harvested and then left to cure in the field and placed in storage under controlled conditions to allow the bulbs to dry completely. Dry bulb alliums have a dry, papery outer skin as distinguished from fresh alliums, which are green and soft.

Sprout suppressants are sometimes used to avoid sprouting of dry bulbs in storage, but in some situations sprouting might happen. These sprouts originate from storage so green parts related to sprouted dry bulbs do not require a phytosanitary certificate and can be released after inspection.

Dry bulb onions (*Allium cepa* var *cepa*) come in a wide range of sizes and shapes, and bulbs might be red, white or yellow. Examples of other dry bulb alliums are dried garlic (*A. sativum*) and dried shallots (*A. cepa* var *aggregatum*).

- 2 Fresh bulb and other plant parts refer to alliums which are harvested fresh and green. They should be targeted by the Leek Moth requirements and be accompanied by a phytosanitary certificate and an additional declaration. Fresh bulb and other plant parts of alliums could be scallions or welsh onions (*Allium fistulosum*), leeks (*A. porrum*) and chives (*A. schoenoprasum*). Garlic (*A. sativum*), green bunching onions (*A. cepa* var *cepa*) and shallots (*A. cepa* var *aggregatum*) when harvested and marketed fresh and showing green parts are regulated and should be accompanied by a phytosanitary certificate and an additional declaration.

RELEASE (These fruits, vegetables, or herbs may be subject to U.S. Food and Drug Administration (FDA) regulations. Refer to <http://www.fda.gov/> for contact information.)

Foreign Origin Other than Canada

TABLE 3-25: Fruits, Vegetables, or Herbs from a Foreign Country OTHER THAN Canada

If:	Then:
Fresh or frozen fruits, vegetables, or herbs	GO to Table 3-26
Dried fruits, vegetables, or herbs	GO to Table 3-27
Preserved fruits, vegetables, or herbs	GO to Table 3-28

TABLE 3-26: Fresh or Frozen Fruits, Vegetables, or Herbs from a Foreign Country OTHER THAN Canada

If:	And:	Then:
Bananas	From North, Central, or South America or their adjacent islands	RELEASE
	From outside the Americas	CONTACT CBP AS
Cannonball fruit, carob, or tamarind bean pod	—————▶	RELEASE
	<i>Cyperus</i> corm, lily bulb, waterchestnut, or waternut	
Ethrogs (noncommercial shipments) ¹	Free from soil	PROHIBIT ENTRY
	Contaminated with soil	PROHIBIT ENTRY
Ethrogs (noncommercial shipments) ¹	Inspection reveals neither insect stings nor pests ²	RELEASE
	Inspection reveals insect stings or pests	PROHIBIT ENTRY
Grapes	From an APHIS approved shipper in Canada ³	RELEASE
	From any other source	PROHIBIT ENTRY
Mushroom or truffle	Free from soil, compost, or growing material	RELEASE
	Contaminated with growing material	PROHIBIT ENTRY
Potatoes	—————▶	
Other than a plant listed above	—————▶	CONTACT CBP AS

- 1 Only small amounts (1-3 fruits) in passenger baggage or mail qualify. Contact CBP AS for commercial shipments.
- 2 Examine the exterior of the ethrogs for surface abnormalities and insect stings. The citrus flower moth, if present, will occur as a larva boring in the outer rind of the fruit. When inspecting for medfly, look for insect stings on the outer surface of the ethrog.
- 3 The following Canadian companies are approved by APHIS to ship fresh Chilean grapes that have met U.S. entry requirements:
 - ◆ Sun Rich Fresh Foods Inc., Richmond, British Columbia, Canada
 - ◆ Sun Rich Fresh Foods Inc., Brampton, Ontario, Canada

TABLE 3-27: Dried Fruits, Vegetables, or Herbs from a Foreign Country OTHER THAN Canada

If:	Then:
<i>Panax quinquefolius</i> (North American ginseng) roots	CONTACT CBP AS
Citrus of any kind	PROHIBIT ENTRY
Other than North American ginseng, or citrus	RELEASE ^{1, 2}

- 1 May be subject to U.S. Food and Drug Administration (FDA) regulations. Refer to <http://www.fda.gov/> for contact information.
- 2 If a garlic bulb, regulate as fresh (see [Table 3-26](#)).

TABLE 3-28: Preserved Fruits, Vegetables, or Herbs Sealed in Containers from a Foreign Country OTHER THAN Canada

If:	And is:	Then:
Commercially preserved and sealed (sterilized)	—————→	RELEASE ¹
Homemade	Cannonball fruit, carob, <i>Cyperus</i> corm, lily bulb, mushroom, tamarind bean pod, truffle, waterchestnut, or waternut	
	Other than a fruit, vegetable, or herb listed in the cell above	PROHIBIT ENTRY

- 1 May be subject to FDA regulations.

U. S. Produce Returned

In most instances you can release fruits and vegetables if you can verify that they are of U. S. origin. Use accompanying documents on fruit and labels on containers to establish origin. If at any time you are in doubt of the produce’s origin, regulate as if the produce were of foreign origin.

Important

Fresh produce of foreign origin is often permitted to transit the United States on its way to Canada. Since the transiting produce may be prohibited entry into the United States, **don’t let it back into the United States without PPQ’s concurrence.** Apples, citrus, grapes, mangoes, nectarines, peaches, pears, plums, and sandpears are examples of fruits prohibited entry into the United States that may be allowed to transit.

Evidence of Origin

Evidence of origin can come from labeling, sales receipts, and answers to your questions. Most often it will be the cumulative evidence that will confirm the origin of the produce.

Citrus

In the case of citrus, **undeniable proof of origin** is an entry requirement. The only example of undeniable proof of origin is labeling declaring U.S. origin on a sealed, unopened bag of fruit.

Important

Stickers on small quantities of non-commercial produce that provide evidence that the fruit originated in the U.S. suffices as adequate proof of origin, but only for U.S. traveler(s) returning to the U.S. after transiting Canada.

TABLE 3-29: Fresh Produce of U.S. Origin Being Returned from Canada

If you can verify that the produce originated in:	And:	Then:
Hawaii, Puerto Rico, or the U.S. Virgin Islands	Is in a sealed package bearing an official PPQ stamp impression “TREATED AND RELEASED” or “RELEASED”	RELEASE
	Is not in a sealed package or lacks the impression described above	CONTACT CBP AS
Originated in the continental United States	Is corn	GO to Table 3-30
	Is other than corn	RELEASE

New Brunswick or Nova Scotia	—————→	GO to Table 3-39
Ontario or Quebec	—————→	GO to Table 3-40
A province other than those listed above	<p>All of the following requirements are met:</p> <ol style="list-style-type: none"> 1. The logs are accompanied by a certification of origin² stating that the logs were produced in an area of Canada where gypsy moth is not known to occur³ 2. The logs are accompanied by a statement of origin and movement⁴ that specifies the Canadian province where the logs originated and, if applicable, the province or provinces they were moved through, if different from the province of origin, and also states that the logs originated in and were moved only through areas of Canada not considered to be infested with pine shoot beetle, as determined by the CFIA³ 3. The U.S. destination (including county and State) is plainly indicated on the logs or, if applicable, on the outer covering, packaging, or container 	RELEASE ⁵
	<p>Lacks the documents and indication of destination described above</p>	CONTACT CBP AS

- 1 Canadian origin pine logs with bark attached are subject to requirements for both gypsy moth and pine shoot beetle. Because the entry requirements are complex and are based on place of origin in Canada as well as place of destination in the U.S., determine the requirements for gypsy moth first, then determine the requirements for pine shoot beetle.
- 2 The certification of origin for gypsy moth is a signed, accurate statement certifying the area in which the logs originated. The statement may be provided directly on the documents accompanying the log shipment, or may be provided on a separate certificate. The certification does **not** require the signature of a CFIA inspector; exporters may sign the statement.
- 3 See [Appendix G](#).
- 4 The statement of origin and movement for pine shoot beetle may be printed directly on the documents accompanying the shipment, or may be provided on a separate document. The certification does **not** require the signature of a CFIA inspector; exporters may sign the statement.
- 5 If the logs are to be moved through an area of the U.S. quarantined for pine shoot beetle ([Appendix G](#)), en route to an area or areas in the U.S. not quarantined for pine shoot beetle during the period of January through September when the temperature is 10°C (50°F) or higher, then the logs must be shipped in an enclosed vehicle or completely covered (such as with plastic canvas, or other closely woven cloth) so as to prevent access by pine shoot beetle.

TABLE 3-39: Pine Logs from New Brunswick or Nova Scotia

If from:	And destined to:	And:	Then:
A Canadian area infested with gypsy moth ¹	The States of CT, DE, DC, MA, MD, MI, NH, NJ, NY, PA, RI, VT, or other areas in the U.S. infested with gypsy moth ^{1, 2}	→	RELEASE
	An area in the U.S. not infested with gypsy moth	Accompanied by a Canadian phytosanitary certificate with one of the following additional declarations: <ul style="list-style-type: none"> ◆ “The logs have been inspected and found free of gypsy moth.” or ◆ “The logs have been treated for gypsy moth in accordance with the Plant Protection and Quarantine Treatment Manual.” 	
		Without the above certification	PROHIBIT ENTRY

- 3 The certification of origin is a signed, accurate statement certifying the area in which the logs originated, and stating that the logs were produced in an area of Canada where gypsy moth is not known to occur. The statement may be provided directly on the documents accompanying the log shipment, or may be provided on a separate certificate. The certification does **not** require the signature of a CFIA inspector; exporters may sign the statement. Oral declarations are acceptable for noncommercial shipments.

TABLE 3-41: Pine Logs from Ontario or Quebec – Pine Shoot Beetle Requirements

If destined to:	And:	Then:
An area in the U.S. infested with pine shoot beetle ¹	Both of the following conditions are met: 1. The logs are accompanied by a statement of origin and movement ² or a Canadian phytosanitary certificate ³ 2. The U.S. destination (including State and county) of the logs is plainly indicated on the logs or on the outer container (if in a container) ⁴	RELEASE
	Both of the conditions in the above cell are not met	PROHIBIT ENTRY
An area in the U.S. not infested with pine shoot beetle	From a noninfested area of Ontario or Quebec	GO to Table 3-42
	From an infested area of Ontario or Quebec	GO to Table 3-43

- 1 See [Appendix G](#).
- 2 The statement of origin and movement for pine shoot beetle is a signed, accurate statement that specifies the county or municipal regional county and province where the logs originated, and if applicable, the counties or municipal regional counties and provinces they were moved through, if different from the county or municipal regional county and province of origin, and also states that the trees originated in and were moved through one or more Canadian provinces considered to be infested or partially infested with pine shoot beetle, as determined by the CFIA. The statement may be printed directly on the documents accompanying the shipment, or may be provided on a separate document. The certification does not require the signature of a CFIA inspector; exporters may sign the statement.
- 3 The phytosanitary certificate must specify the county or municipal regional county and province where the logs originated.
- 4 For pine firewood, an oral declaration of U.S. destination will be sufficient.

TABLE 3-42: Pine Logs from an Area of Ontario or Quebec NOT Infested with Pine Shoot Beetle to a U. S. Area NOT Infested with Pine Shoot Beetle

If:	And:	And during:	And:	Then:
One of the following conditions is met: 1. The logs are accompanied by a Canadian phytosanitary certificate ¹ 2. The logs are consigned to an approved U.S. facility ² and are accompanied by a statement of origin and movement ³ and an import permit	Have moved or will move through an area infested with pine shoot beetle ^{4, 5}	March through September	The logs are covered or in a container	RELEASE
			The logs are not covered or in a container	PROHIBIT ENTRY
		October through February	—————▶	RELEASE
	Have not moved or will not move through an area infested with pine shoot beetle ⁶	—————▶		
Neither of the above conditions is met	—————▶		—————▶	PROHIBIT ENTRY

- 1 The phytosanitary certificate must specify the county or municipal regional county and province where the logs originated. In addition, the U.S. destination (including county and State) must be plainly indicated on one of the logs or, if applicable, on the outer covering, packaging, or container.
- 2 The facility must operate under a compliance agreement with APHIS in accordance with 7 CFR 319.40-8 for specified handling or processing of the articles. The name and address of the U.S. facility (including county and State) receiving the logs must be plainly indicated on one of the logs or, if applicable, on the outer covering, packaging, or container. For a list of pine shoot beetle facilities under compliance agreement, see [Appendix D](#).
- 3 The statement of origin and movement for pine shoot beetle is a signed, accurate statement that specifies the county or municipal regional county and province where the logs originated, and if applicable, the counties or municipal regional counties and provinces they were moved through, if different from the county or municipal regional county and province of origin, and also states that the trees originated in and were moved through one or more Canadian provinces considered to be infested or partially infested with pine shoot beetle, as determined by the CFIA. The statement may be printed directly on the documents accompanying the shipment, or may be provided on a separate document. The certification does not require the signature of a CFIA inspector; exporters may sign the statement.
- 4 See [Appendix G](#).
- 5 The phytosanitary certificate must contain the following additional declaration: "This shipment transited one or more areas infested with pine shoot beetle."
- 6 The phytosanitary certificate must contain the following additional declaration: "These regulated articles originated in and were moved only through areas where pine shoot beetle *Tomicus piniperda* is not present, as determined by the CFIA."

TABLE 3-43: Pine Logs from an Area of Ontario or Quebec Infested with Pine Shoot Beetle to a U. S. Area NOT Infested with Pine Shoot Beetle

If:	And during:	And:	Then:
One of the following conditions is met: 1. The logs are accompanied by a Canadian phytosanitary certificate with the required treatment recorded in the appropriate section ¹ 2. The logs are shipped from a CFIA-approved facility ² 3. The logs are consigned to an approved U.S. facility ³ and are accompanied by a statement of origin and movement ⁴ and an import permit	March through September	The logs are covered or in a container	RELEASE
		The logs are not covered or in a container	PROHIBIT ENTRY
	October through February	—————▶	RELEASE
None of the above conditions are met	—————▶	—————▶	PROHIBIT ENTRY

1 The treatment section of the certificate must indicate that the logs have been treated with methyl bromide to kill the pine shoot beetle in accordance with 7 CFR 319.40-7(f).

The phytosanitary certificate must specify the county or municipal regional county and province where the logs originated and must contain the following additional declaration: "This shipment transited one or more areas infested with pine shoot beetle." In addition, the U.S. destination (including county and State) must be plainly indicated on one of the logs or, if applicable, on the outer covering, packaging, or container.

2 The facility must process only regulated articles that originated in areas in Canada or the United States not considered to be infested with pine shoot beetle. The name and address (including the county or municipal regional county and Province) of the CFIA-approved facility that shipped the articles, as well as the U.S. destination (including county and State) must be plainly indicated on one of the logs or, if applicable, on the outer covering, packaging, or container.

There are no approved facilities at this time.

3 The facility must operate under a compliance agreement with APHIS in accordance with 7 CFR 319.40-8 for specified handling or processing of the regulated articles. The logs must be transported by as direct a route as reasonably possible and not off-loaded en route to the U.S. facility. In addition, the name and address (including county and State) of the U.S. facility receiving the logs must be plainly indicated on one of the logs or, if applicable, on the outer covering, packaging, or container. For a list of pine shoot beetle facilities under compliance agreement, see [Appendix D](#).

4 The statement of origin and movement for pine shoot beetle is a signed, accurate statement that specifies the county or municipal regional county and province where the logs originated, and if applicable, the counties or municipal regional counties and provinces they were moved through, if different from the county or municipal regional county and province of origin, and also states that the trees originated in and were moved through one or more Canadian provinces considered to be infested or partially infested with pine shoot beetle, as determined by the CFIA. The statement may be printed directly on the documents accompanying the shipment, or may be provided on a separate document. The certification does not require the signature of a CFIA inspector; exporters may sign the statement.

TABLE 3-44: Ash Logs and Wood with Bark

If from:	And:	Then:
Counties regulated for the Emerald Ash Borer (EAB) ¹	Accompanied by an import permit (IP) and a phytosanitary certificate (PC) documenting that the shipment meets one of the following conditions: <ul style="list-style-type: none"> ◆ The articles have been debarked. The PC must contain an additional declaration (AD) stating that “The articles in the shipment were debarked and vascular cambium was removed to a depth of 1.27 cm during the debarking process.” or, ◆ The articles have been fumigated with methyl bromide as specified in T404-b-1-1 of PPQ’s <i>Treatment Manual</i>. The details of the treatment must be specified in the treatment section of the PC. or, ◆ The articles have been heat treated at a temperature of at least 71.1°C for a minimum of 75 minutes as specified in T314-a of PPQ’s <i>Treatment Manual</i>.² The details of the treatment must be specified in the treatment section of the PC. or, ◆ The articles have been kiln dried as specified in T404-b-4 of PPQ’s <i>Treatment Manual</i>. The regulated articles are accompanied by a statement of origin and movement that specifies the county or municipal regional county and province where the articles originated, and if applicable, the counties or municipal regional counties and provinces they were moved through, if different from the county or municipal regional county and province of origin, and also states that the regulated articles originated in and were moved through one or more provinces of Canada considered to be infested or partially infested with pine shoot beetle, as determined by the CFIA. 2. The U.S. destination (including county and State) is plainly indicated on the articles or, if applicable, on the outer covering, packaging, or container. 	RELEASE
Both of the conditions above are not met	PROHIBIT ENTRY

TABLE 3-49: Pine Wood Chips, Bark, Bark Chips, or Nuggets from Areas in Ontario or Quebec Infested with Pine Shoot Beetle Moving to U.S. Areas NOT Infested with Pine Shoot Beetle

If:	Then:
<p>One of the following sets of conditions is met:</p> <ol style="list-style-type: none"> 1. The regulated articles are accompanied by a phytosanitary certificate that specifies the county or municipal regional county and province where the articles originated, and if applicable, the counties or municipal regional counties and provinces they were moved through, if different from the county or municipal regional county and province of origin. The treatment section of the certificate must indicate that the articles have been treated with methyl bromide to kill pine shoot beetle. In addition, the U.S. destination (including county and State) must be plainly indicated on the articles or, if applicable, on the outer covering, packaging, or container. 2. The regulated articles consist of pine bark and are accompanied by a phytosanitary certificate that specifies both the county or municipal regional county and province where the regulated articles originated and, if applicable, the counties or municipal regional counties and provinces they were moved through, if different from the the county or municipal regional county and province of origin. The additional declaration section must state, "The pine bark in this shipment has been ground into pieces less than or equal to 1 inch in diameter." In addition, the U.S. destination (including county and State) of the regulated articles must be plainly indicated on the regulated articles or, if applicable, on the outer covering, packaging, or container. 3. The regulated articles are shipped from a CFIA-approved facility that processes only regulated articles that originated in areas in Canada or the United States not considered to be infested with pine shoot beetle. The name and address (including the county or municipal regional county and Province) of the CFIA-approved facility that shipped the articles, as well as the U.S. destination (including county and State) must be plainly indicated on the regulated articles or, if applicable, on the outer covering, packaging, or container. 4. The regulated articles, consisting of pine bark, are shipped from a CFIA-approved facility for use as a fuel at a cogeneration facility in the United States approved by APHIS. The pine bark must be transported by as direct a route as reasonably possible and not off-loaded en route to the U.S. cogeneration facility. The name and address (including the county or municipal regional county and Province) of the CFIA-approved facility that shipped the pine bark, as well as the name and address of the U.S. cogeneration facility receiving the shipment (including county and State) must be plainly indicated on the outer covering, packaging, or container of the pine bark. 	<p>RELEASE¹</p>
<p>None of the above conditions are met</p>	<p>PROHIBIT ENTRY</p>

1 If the regulated articles are to be moved through an area of the U.S. quarantined for pine shoot beetle ([Appendix G](#)), en route to an area or areas in the U.S. not quarantined for pine shoot beetle during the period of January through September when the temperature is 10°C (50°F) or higher, then the articles must be shipped in an enclosed vehicle or completely covered (such as with plastic canvas, or other closely woven cloth) so as to prevent access by pine shoot beetle.

A bamboo ¹ or citrus ²	→	PROHIBIT ENTRY
A cactus, an orchid, or any other plant regulated by CITES ³	→	GO to Table 3-57
A palm ⁴ that is not regulated by CITES	Accompanied by a Canadian Phytosanitary Certificate showing that the palm originated in Canada	RELEASE
	Lacks certification that the palm originated in Canada	PROHIBIT ENTRY
A species that is a host of the swede midge (Table 3-55)	→	GO to Table 3-56
A species of <i>Pelargonium</i> ⁵	Is accompanied by either a shipping invoice with a Canadian Food Inspection Agency label (Form CFIA/ACIA 4702) attached stating “Greenhouse-grown Plants from Canada,” or a Canadian Phytosanitary Certificate ⁶ with the following additional declaration: “ <i>Ralstonia solanacearum</i> race 3 biovar 2 is not known to occur in the country of origin.”	GO to Table 3-61
	Lacks the documentation described above	PROHIBIT ENTRY
None of the plants listed in the cells above	Grown in soil but not greenhouse grown	GO to Table 3-61
	◆ Greenhouse grown in soil or ◆ Bare-rooted	GO to Table 3-62

1 The most common genera of bamboo include *Arundinaria*, *Bambusa*, *Chimonobambusa*, *Dendrocalamus*, *Phyllostachys*, *Pseudosasa*, *Sasa*, *Semiarundinaria*, and *Shibataea*.

- 2 The term “citrus” refers to all genera, species, and varieties of the subfamilies Aurantioideae, Rutoideae, and Toddalioideae of the botanical family Rutaceae, and includes such plants as *Boronia*, *XCitrofortunella mitis* (calamondin), *Calodendrum capense* (cape chestnut), China flower, *Citrus medica* (citron), *Fortunella* (kumquat), *Citrus X paradisi* (grapefruit), *Citrus limon* (lemon), *Citrus aurantiifolia* (lime), *Citrus sinensis* (orange), *Murraya paniculata* (orange-jessamine), *Ruta* spp. (rue), *Citrus X tangelo* (tangelo), and *Citrus reticulata* (tangerine).
- 3 CITES is the Convention on International Trade in Endangered Species of Wild Fauna and Flora.
- 4 The palm family includes over 100 cultivated genera, some of which are prohibited entry into the United States. CFIA will not issue a phytosanitary certificate for prohibited plants.
- 5 The common bedding plant called a geranium is really in the genus *Pelargonium*. While plants of the genus *Geranium* are not host to *Ralstonia solanacearum* race 3 biovar 2, geraniums (*Pelargonium* sp.) plants are a separate species from *Geranium* spp. and are regulated differently due to disease risk.
- 6 The phytosanitary certificate may be CFIA Form 1327, CFIA Form 4743, or CFIA/ACIA 5378.

TABLE 3-55: Reported Hosts of Swede Midge

Scientific Name	Common Name
<i>Armoracia rusticana</i>	Horseradish
<i>Brassica napus</i> (all varieties)	Includes: Rape, Colza, Rutabaga, Swede, Swedish Turnip, Siberian Kale, Hanover Salad, etc.
<i>Brassica oleracea</i> (all varieties)	Includes: Wild Cabbage, Kale, Collards, Chinese Kale, Broccoli, Cauliflower, Head Cabbage, Brussels Sprouts, Kohlrabi, etc.
<i>Brassica rapa</i> (all varieties)	Chinese Cabbage, Rapini, Turnip
<i>Lepidium sativum</i>	Garden Cress
<i>Nasturtium amphibium</i>	Tall Nasturtium
<i>Nasturtium officinale</i>	Watercress
<i>Nasturtium palustre</i>	Marsh Watercress
<i>Nasturtium silvestre</i>	Creeping Watercress
<i>Raphanus sativus</i> (all varieties)	Chinese Radish

TABLE 3-56: Canadian Origin Hosts of Swede Midge

If from:	And:	Then:
An area of Canada infested with swede midge ¹	Produced under the Swede Midge Certification Program (SMCP) and accompanied by the SMCP sticker indicating it meets the USDA requirements for entry	GO to Table 3-61
	Lacks the above sticker	PROHIBIT ENTRY
All areas of Canada other than those listed above	Accompanied by a phytosanitary certificate that indicates origin from a non-infested area of Canada, or Produced under the Canadian Greenhouse Certification Program and accompanied by the appropriate sticker indicating the material meets USDA requirements in lieu of a phytosanitary certificate, or Produced under the SMCP and accompanied by the appropriate sticker indicating the material meets USDA requirements in lieu of a phytosanitary certificate	GO to Table 3-61
	Lacks a phytosanitary certificate or the above sticker	PROHIBIT ENTRY

1 The areas of Canada infested with swede midge are as follows:

- ◆ **Ontario:** The city of Toronto and the counties of Brant, Dufferin, Durham, Halton, Hamilton-Wentworth, Niagara, Norfolk, Oxford, Simcoe, Victoria, Waterloo, Wellington, or York.
- ◆ **Quebec:** The counties of Argenteuil, Communauté Urbaine de Montréal, Deux-Montagnes, Haut-Richelieu, Jardins-de-Napierville, Laval, La Vallée-du-Richelieu, Mirabel, Montcalm, Roussillon, Rouville, Therese-de-Blainville, or Vaudreuil-Soulanges.

TABLE 3-57: Canadian Origin CITES Regulated Plants Grown Indoors

If:	And:	And:	Then:
Grown at a greenhouse participating in the Canadian greenhouse certification program ¹	CITES documents ² accompany the shipment	Entering a designated port ³	CONTACT PPQ or CBP AS
		Not entering a designated port	HAVE the importer reroute the plants to a designated port (if appropriate, safeguard under plant quarantines first). Shipping and handling charges are to be borne by the importer ⁴ .
	No CITES documents accompany the shipment	→	SEIZE the shipment and hold for PPQ
Grown at a greenhouse not participating in the Canadian greenhouse certification program, or grown in soil but not greenhouse grown	→	→	GO to Table 3-58

- 1 Must be accompanied by **either** a shipping invoice with a Canadian Food Inspection Agency label (Form CFIA/ACIA 4702) attached stating “Greenhouse-grown Plants from Canada,” **or** a Canadian Phytosanitary Certificate.
- 2 CITES is the Convention on International Trade in Endangered Species of Wild Fauna and Flora. The documentation must be a CITES export permit issued by the Canadian Wildlife Service.
- 3 Designated ports for the importation of plants from Canada are the following: Detroit and Port Huron, MI; Buffalo and Rouses Point, NY; and Blaine, WA.
- 4 If movement to a designated port is unacceptable, contact a PPQ Regional Botanist or CITES Specialist to see whether re-export is an option.

TABLE 3-58: Canadian Origin CITES Regulated Plants Not Greenhouse Certified

A tree or shrub with roots and persistent woody stems other than <i>Berberis</i> , <i>Mahonia</i> , or <i>Mahoberberis</i>	A species of <i>Pinus</i> (Pine)	GO to Table 3-70
	A woody plant other than pine	GO to Table 3-74
A Federal noxious weed or a parasitic plant (see Appendix F for a list)	Accompanied by, and in compliance with, PPQ Form 526, Permit to Move Live Plant Pests or Noxious Weeds ⁴	RELEASE
	Not accompanied by the above form	PROHIBIT ENTRY
Grass sod or any plant other than those listed above	Accompanied by a Canadian Phytosanitary Certificate ^{1, 2}	RELEASE
	Lacks a Canadian Phytosanitary Certificate	PROHIBIT ENTRY

1 If the article is from a Potato Cyst Nematode (PCN) regulated area, the Canadian Food Inspection Agency (CFIA) will provide an additional declaration "The articles in this shipment were grown in a PCN-free place of production and in a manner to prevent infestation by Potato Cyst Nematodes (*Globodera rostochiensis* and/or *G. pallida*)."

The areas of Canada regulated for PCN by CFIA are the following:

- ◆ Alberta: A farm unit and associated land located near the municipality of Fort Saskatchewan; and a farm unit and associated land located near the municipality of Spruce Grove
- ◆ British Columbia: That portion of the Municipality of Central Saanich on Vancouver Island, east of the West Saanich Road
- ◆ Newfoundland and Labrador: The entire island of Newfoundland
- ◆ Quebec: The municipality of Saint-Amable

2 The phytosanitary certificate may be CFIA Form 1327, CFIA Form 4743, or CFIA/ACIA 5378.

3 The common bedding plant called a geranium is really in the genus *Pelargonium*. While plants of the genus *Geranium* are not host to *Ralstonia solanacearum* race 3 biovar 2, geraniums (*Pelargonium* sp.) plants are a separate species from *Geranium* spp. and are regulated differently due to disease risk.

4 If a shipment is not in compliance with permit conditions, CONTACT PPQ PERMIT SERVICES at 1-877-770-5990.

TABLE 3-70: Canadian Origin Pine Trees with Roots¹

If from:	And:	Then:
New Brunswick or Nova Scotia		GO to Table 3-71
Ontario or Quebec		GO to Table 3-72
A province or area other than those listed in the two cells above	Accompanied by a USDA Import Permit and a Canadian Phytosanitary Certificate ^{2, 3} specifying a place of origin where gypsy moth is not known to occur ⁴	RELEASE
	Not accompanied by the above documentation	CONTACT CBP AS

1 Canadian pine trees with roots are subject to requirements for potato cyst nematodes, gypsy moth, and pine shoot beetle. Because the entry requirements are complex and are based on place of origin in Canada as well as place of destination in the U.S., check to make sure potato cyst nematode requirements are met (see [Table 3-63 on page 33-51](#)), then determine the requirements for gypsy moth and pine shoot beetle.

2 If the article is from a Potato Cyst Nematode (PCN) regulated area, the Canadian Food Inspection Agency (CFIA) will provide an additional declaration “The articles in this shipment were grown in a PCN-free place of production and in a manner to prevent infestation by Potato Cyst Nematodes (*Globodera rostochiensis* and/or *G. pallida*).”

The areas of Canada regulated for PCN by CFIA are the following:

- ◆ Alberta: A farm unit and associated land located near the municipality of Fort Saskatchewan; and a farm unit and associated land located near the municipality of Spruce Grove
- ◆ British Columbia: That portion of the Municipality of Central Saanich on Vancouver Island, east of the West Saanich Road
- ◆ Newfoundland and Labrador: The entire island of Newfoundland
- ◆ Quebec: The municipality of Saint-Amable

3 The phytosanitary certificate may be CFIA Form 1327, CFIA Form 4743, or CFIA/ACIA 5378.

4 See [Appendix G](#).
