

# **Dwelling Burglary**

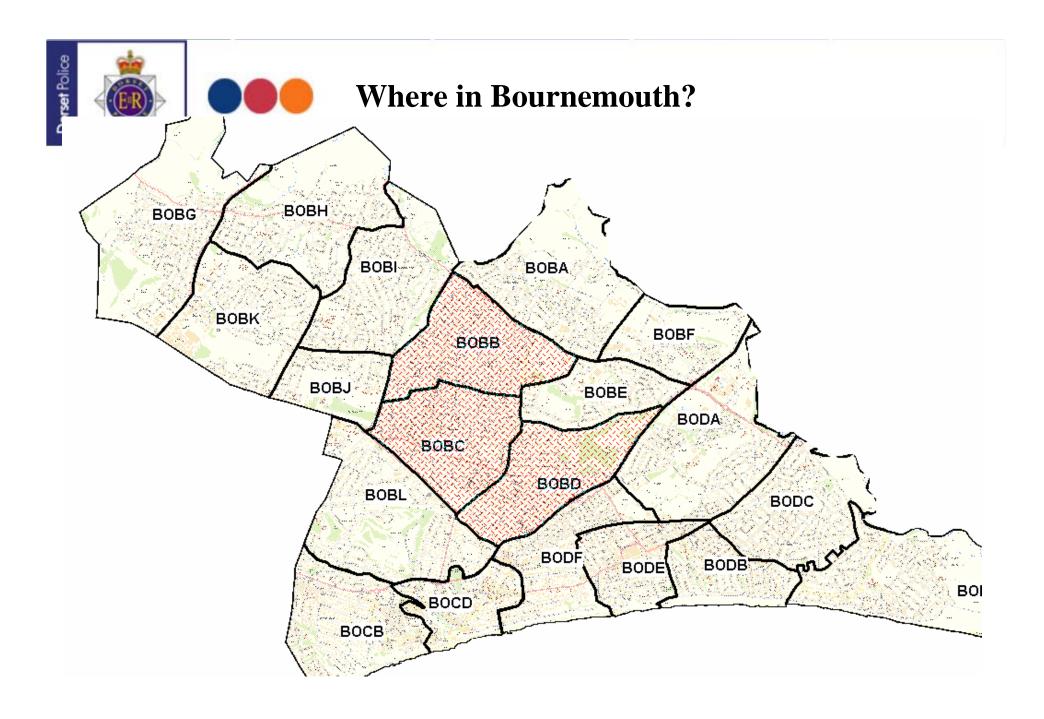

# The 'near repeat' phenomena – Predictive analysis?

# And your point is?

# In certain space time situations each dwelling burglary event can be used as a <u>predictive</u> indicator

If we can predict crime in space & time then we can <u>REDUCE</u> crime in space & time.

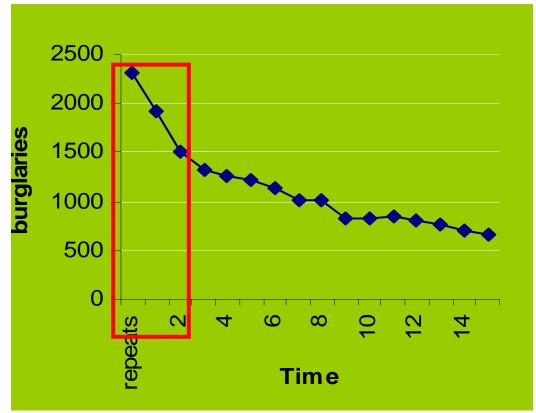

- •Trigger plan when burglary occurs in designated beat area
- Prepare map & identify high risk properties
- •PCSO's &/or other resources to visit high risk properties <u>asap</u>

### Reduction Strategy

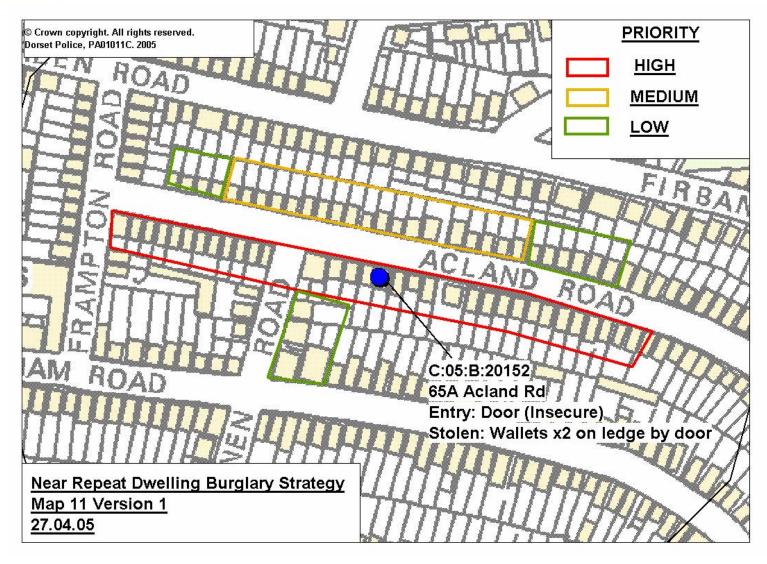

•Why a.s.a.p.?

•Distance decay effect – Best window of opportunity is 48 hours.

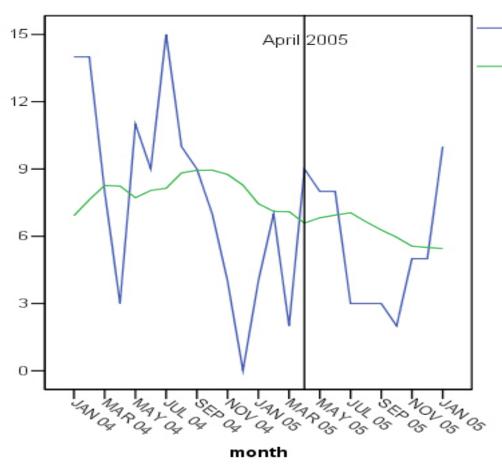

count

Fit for count from

EXSMOOTH, MOD\_2 NN A .

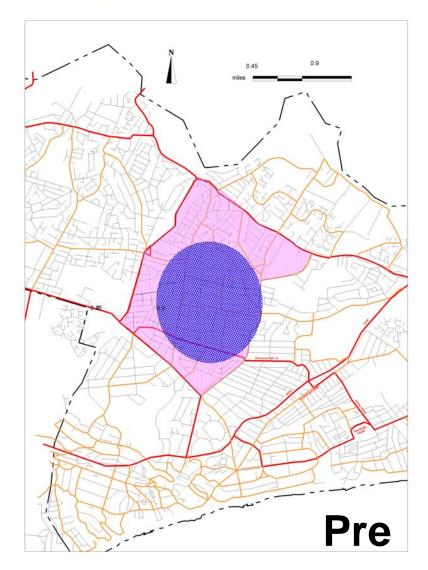

#### Divisional reduction 2004/'05 to 2005/06 –27%

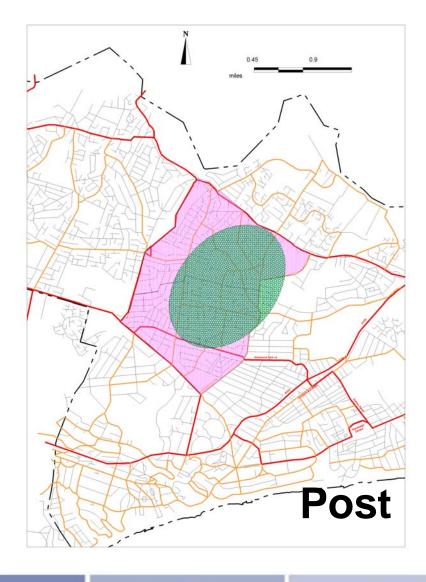

Near repeat area reduction 32.5%

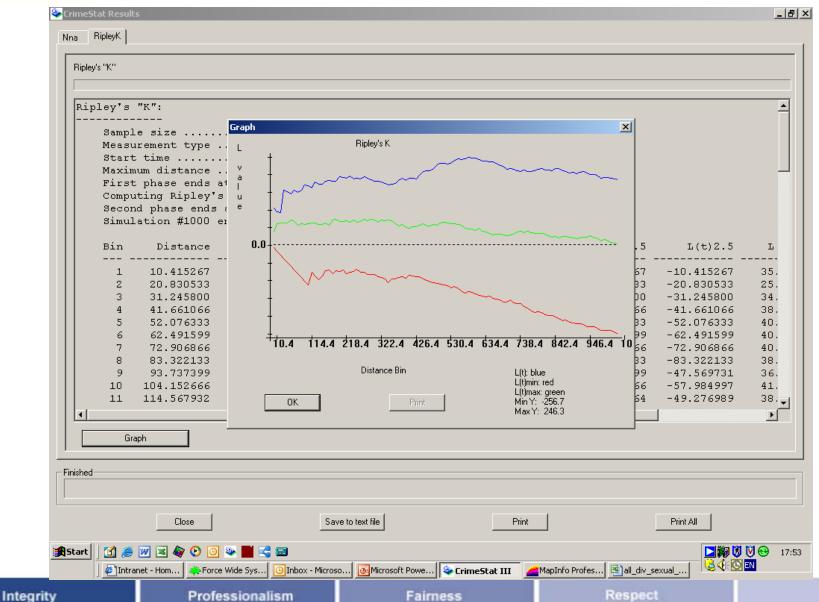

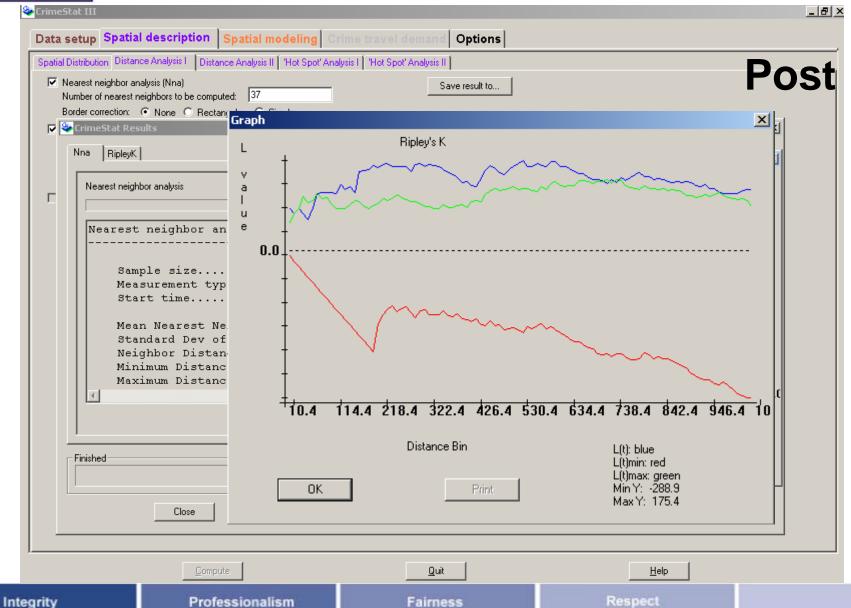

#### **New advances**

- Community support
  - Text messaging
    - Auto crime
- Enforcement opportunities
- •Other acquisitive crime types?
