# World Agricultural Production

**Brazil Cotton Area by State:**  
Increased planting in high-yielding states

## Brazil: Cotton Production Near 2003/04 Record

Brazil's cotton production for 2006/07 is forecast at 6.0 million bales, up 9 percent from last month, and up 28 percent from last year. Harvested area is forecast at 1.03 million hectares, up 3 percent from last month, and up 21 percent from last year. A record yield is forecast at 1,268 kilograms per hectare, which is up 6 percent from last month, and up 5 percent from last year. Planting is underway in Brazil's largest cotton-producing state, Mato Grosso, which produces 51 percent of the country's total cotton crop. Planting is concluding in Bahia and Goias, the second and third largest producing states, which account for 13 and 12 percent of the crop, respectively. Weather has been ideal for much of the cotton crop, boosting yield prospects. Cotton will be the first crop to recover from several years of liquidity crisis. Strong internal prices and an expected stable exchange rate have led farmers in the high-yielding states of Mato Grosso and Bahia to make plans to increase significantly area planted to cotton. Despite a slight decrease in the cotton area of southern Brazil, overall area is expected to increase significantly. The U.S. agricultural attaché in Brasilia reports that Brazilian farmers have already committed up to 60 percent of the future cotton crop for inputs (e.g. fertilizer and pesticides) which is expected to result in high yields for the safrinha cotton and corn crops. Cotton is reported to be the one crop in Mato Grosso that will return a profit, leading farmers to plant more cotton to cover losses in other

crops. As most of the 2006/07 production will be harvested towards the end of the trade year, exports from this crop will be made in the 2007/08 trade year. *(For more information, contact Nicole Wagner at 202-720-0882.)*

## **Brazil Corn in Good to Very Good Condition**

Brazil's corn production for 2006/07 is forecast at 42.0 million tons, unchanged from last month, and up 0.3 million from last year. Harvested area for 2006/07 is forecast at 12.7 million hectares, unchanged from last month but down 0.2 million from last year. Yield is forecast at 3.3 tons per hectare, unchanged from last month but slightly up from last year. Summer corn planting is nearly finished. Rains and warmer weather have facilitated crop development in Parana, Brazil's largest corn-producing state. Plants in Parana are entering grain-fill and are rated to be in good to very good condition. Nearly all of the summer corn growing regions have experienced very good weather, except for Sao Paulo, which experienced some dryness in November. Brazil's largest summer corn producing states are Parana, Minas Gerais, and Rio Grande do Sul, which account for approximately 19, 12, and 11 percent, respectively, of the total corn crop. High corn prices will very likely influence farmers to plant a bigger safrinha (winter) corn crop and may help to boost yield due to increased fertilizer sales. The recent increase in corn prices, however, arrived too late to have much effect on the currently planted summer crop. Additionally, soybeans are being harvested ahead of normal in Mato Grosso, which will mean earlier planting of the winter corn (which follows soybeans), thus resulting in higher yield prospects. Winter corn typically accounts for 25 percent of Brazil's total corn area and 23 percent of the total corn production. *(For more information, contact Nicole Wagner at 202-720-0882.)*

## **Argentina: Record 2006/07 Soybean Area and Production Forecast**

Argentina's soybean production for 2006/07 is forecast at a record 42.5 million tons, up 0.5 million from last month and up 2.0 million from last year. Harvested area is forecast at a record 15.7 million hectares, unchanged from last month and up 0.5 million from last year. Yield is forecast at 2.71 tons per hectare, slightly up from last month, and just above last year's yield of 2.66 tons per hectare. As of January 4, planting progress was 87 percent complete compared to 91 percent this time last year, according to the Argentina's Secretariat of Agriculture (SAGPyA). In Cordoba, planting progress was delayed earlier this season due to dryness, and has remained slightly behind schedule for most of the planting window, due to frequent showers. Second-crop soybeans still need to be planted in Río Cuarto and San Francisco delegations of Cordoba province, as well as in several of the Northern provinces. Crop development has advanced rapidly due to abundant rainfall and warm weather. Most of the first-crop soybeans are flowering and the most advanced soybeans are in the pod-filling stage in Santa Fe and Cordoba. Currently soil moisture is rated very good while disease and pest problems have been minimal. Optimal early growing conditions have improved the likelihood of obtaining better than average yields. *(For more information, contact Nicole Wagner at 202-720-0882.)*

## **India Rapeseed Loses Ground to Wheat**

India's 2006/07 rapeseed production is estimated at 6.2 million tons, down 0.3 million or 5 percent from last month, and down 0.6 million or 9 percent from last year. Area is forecast at 6.7 million hectares, down 0.4 million or 6 percent from last month, and down 0.6 million or 8 percent from last year.

According to the latest government data, 2006/07 rabi/winter season rapeseed planting is down from last season. As of December 29, 2006, rapeseed had been sown on 6.6 million hectares, as compared to 7.2 million at the same time last season when 98 percent was sown. Assuming a similar pattern this year, the total sown area is forecast to reach 6.7 million hectares.

The decline in rapeseed area from last season is due to recent changes in support price policy. Area is down this season, as rapeseed area was shifted into wheat in Haryana and Rajasthan, and to chickpeas in Madhya Pradesh. The Minimum Support Price (MSP) established by the Government of India favors wheat over rapeseed this season. The wheat MSP for the current season was raised from 650 rupees per 100 kilo to a new high of 750 rupees. This is a 15 percent increase year-to-year; in contrast, rapeseed MSP remained flat on the year.

Yield is currently forecast at 925 kilograms per hectare and is marginally below the five-year average. Rapeseed yield is heavily dependent on weather conditions from now until the flowering period, which typically occurs in February. Sowing for the 2006/07 India rapeseed crop was primarily accomplished in November 2006. The main harvest will take place in March 2007. *(For more information, contact Jim Crutchfield at 202-690-0135.)*

## **Indonesia's Lack of Rainfall Reduces Estimated Rice Crop**

The 2006/07 Indonesia rice production is forecast at 34.3 million tons on a milled basis, down 0.8 million or 2 percent from last month, and down 0.6 million or 2 percent from last year. The area forecast is 11.7 million hectares, down 0.2 million or 1 percent from last month, and down 0.1 million or 1 percent from last year. The paddy yield forecast is 4.55 tons per hectare (2.93 tons per hectare milled).

The delayed rainy season is expected to marginally reduce sown area on the island of Java, which accounts for over half of Indonesian rice production. Conditions are reported to be normal on the island of Sumatra, which accounts for about one-fourth of the Indonesian rice production.

According to a local analyst, the rain delay in Klatan is the worst in 23 years, and this will push back planting and subsequent harvesting of rice, the principal crop. Sowing for the main rice crop occurs from November through January, and it is harvested during March to May. The smaller, second crop on Java is sown during July and August, and then harvested during November and December. *(For more information, contact Jim Crutchfield at 202-690-0135.)*

## **Russia: State Statistical Committee Releases Preliminary Wheat Harvest Data**

The USDA estimates Russia wheat production for 2006/07 at 44.9 million tons, up 1.4 million or 3 percent from last month but down 2.8 million or 6 percent from last year. Area is estimated at 23.7 million hectares, unchanged from last month and down 1.7 million or 7 percent from last year. Winter wheat comprises roughly 40 percent of total wheat area and 60 percent of production. The increase in estimated production is based on preliminary harvest data released by the State Statistical Committee of Russia. *(For more information, contact Mark Lindeman at 202-690-0143.)*

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Branch, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-441), January 12, 2007.

**Printed copies are available from the National Technical Information Service. Download an order form at [http://www.ntis.gov/products/specialty/usda/fas\\_a-g.asp](http://www.ntis.gov/products/specialty/usda/fas_a-g.asp), or call NTIS at 1-800-363-2068.**

The FAS International Production Assessment Branch prepared this report. The next issue of World Agricultural Production will be released after 9:30 a.m. Eastern Time, February 9, 2007.

### Conversion Table

World and Selected Countries and Regions

1/12/2007 10:02:19 AM

## TABLE 18

The table below presents a 25-year record of the differences between the January projection and the final estimate. Using world wheat production as an example, changes between the January projection and the final estimate have averaged 3.1 million tons (0.6 percent) and ranged from -8.3 to 6.4 million tons. The January projection has been below the final 17 times and above the final 8 times.

### RELIABILITY OF PRODUCTION PROJECTIONS

COMMODITY AND REGION	PROJECTION AND FINAL ESTIMATES, 1981/82 - 2005/06 1/					
	Difference		Lowest	Highest	Below	Above
	Average	Average	Difference		Final	Final
	Percent	---Million metric tons---		Number of years 2/

1/ The final estimate for 1981/82-2004/05 is defined as the first December estimate following the marketing year.

2/ May not total 25 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
