

Map of Gage Location

Latitude/Longitude: The latitude and longitude should be entered to the nearest second.

How can you find this information???

USGS Water Resources (paper copies or CD ROM)
Site visit with a Global Positioning System (G.P.S.)

USGS web site
Gage owner (if not USGS)

Source: Enter the source of the latitude and longitude information and the map below.

Map: Place a map on this page (hard copy). A copy of the USGS topological map for the area is a good candidate for the map. WHFS will have a variety of maps to view, but will not provide the USGS topological maps. Paper USGS maps can be photo copied, or you may print out a copy of the topo map directly from the USGS Topological Maps CD ROM.
