

NIOSH Survey of U.S. Truck Driver Injury and Health Proposed Study Plan (DRAFT 09/07)

Identify truck stops along interstate routes. Stratify by geographical region and traffic load. Systematic selection of 40 truck stops for survey.

Preliminary interview as truck occupants walk into the truck stop area. Use to determine eligibility for survey.

1 of 4 self-administered questionnaires randomly distributed to eligible drivers agreeing to participate, to be completed before leaving truck stop.
