

**Table A. Summary of Stock Status for Major Species Contained in Federal Fishery Management Plans.**

Fishery Management Plan	Stock	Jurisdiction	Overfishing? (Is Fishing Mortality above Threshold?)		Overfished? (Is Biomass below Threshold?)		Approaching Overfished Condition?	Management Action Required	Rebuilding Program Progress
			Pre SFA	Post SFA	Pre SFA	Post SFA			
Atlantic Sea Scallop	ATLANTIC SEA SCALLOP	NEFMC		Yes		No	No	reduce mortality	rebuilt under plan
Northeast Multispecies	COD - GULF OF MAINE	NEFMC		Yes		Yes	N/A	reduce mortality continue rebuilding	1/10-year plan
	COD - GEORGES BANK	NEFMC		Yes		Yes	N/A	reduce mortality continue rebuilding	1/22-year plan
Northeast Multispecies	HADDOCK - GULF OF MAINE	NEFMC		No		Yes	N/A	continue rebuilding	1/10-year plan
	HADDOCK - GEORGES BANK	NEFMC		No		Yes	N/A	continue rebuilding	1/10-year plan
Northeast Multispecies	AMERICAN PLAICE	NEFMC		Yes		Yes	N/A	reduce mortality continue rebuilding	1/10-year plan
Northeast Multispecies	REDFISH	NEFMC		No		No-rebuilding	No	continue rebuilding <sup>1</sup>	1/47-year plan
Northeast Multispecies	WITCH FLOUNDER	NEFMC		Yes		No	No	reduce mortality	N/A

Fishery Management Plan	Stock	Jurisdiction	Overfishing? (Is Fishing Mortality above Threshold?)		Overfished? (Is Biomass below Threshold?)		Approaching Overfished Condition?	Management Action Required	Rebuilding Program Progress
			Pre SFA	Post SFA	Pre SFA	Post SFA			
Northeast Multispecies	YELLOWTAIL FLOUNDER - GEORGES BANK	NEFMC		No		No <sup>2</sup>	No	N/A	N/A
	YELLOWTAIL FLOUNDER - SOUTHERN NEW ENGLAND/MIDDLE ATLANTIC	NEFMC		Yes		Yes	N/A	reduce mortality continue rebuilding	1/10-year plan
	YELLOWTAIL FLOUNDER - CAPE COD/GULF OF MAINE	NEFMC		Yes		Yes	N/A	reduce mortality continue rebuilding	1/19-year plan
Northeast Multispecies	WHITE HAKE	NEFMC		Yes		Yes	N/A	reduce mortality continue rebuilding	1/10-year plan
Northeast Multispecies	POLLOCK	NEFMC		No		No - rebuilding	No	continue rebuilding <sup>1</sup>	1/10-year plan
Northeast Multispecies	WINDOWPANE FLOUNDER - GULF OF MAINE / GEORGES BANK	NEFMC		No		No	No	N/A	N/A
	WINDOWPANE FLOUNDER - SOUTHERN NEW ENGLAND/MIDDLE ATLANTIC	NEFMC		No		Yes	N/A	continue rebuilding	1/10-year plan
Northeast Multispecies	WINTER FLOUNDER - GULF OF MAINE	NEFMC		No		No	No	N/A	N/A
	WINTER FLOUNDER - GEORGES BANK	NEFMC		No		No	No	N/A	rebuilt
	WINTER FLOUNDER - SOUTHERN NEW ENGLAND / MIDDLE ATLANTIC	NEFMC		Yes		Yes	N/A	reduce mortality continue rebuilding	1/10-year plan
Northeast Multispecies	SILVER HAKE - GULF OF MAINE / NORTHERN GEORGES BANK	NEFMC		No		No	No	N/A	Rebuilt

Fishery Management Plan	Stock	Jurisdiction	Overfishing? (Is Fishing Mortality above Threshold?)		Overfished? (Is Biomass below Threshold?)		Approaching Overfished Condition?	Management Action Required	Rebuilding Program Progress
			Pre SFA	Post SFA	Pre SFA	Post SFA			
Northeast Multispecies	SILVER HAKE - SOUTHERN GEORGES BANK / MIDDLE ATLANTIC	NEFMC		Unknown		No - rebuilding	No	continue rebuilding <sup>1</sup>	5/10-year plan
Northeast Multispecies	RED HAKE - GULF OF MAINE / NORTHERN GEORGES BANK	NEFMC		Unknown		No	No	N/A	N/A
	RED HAKE - SOUTHERN GEORGES BANK / MIDDLE ATLANTIC	NEFMC		Undefined		No	Unknown <sup>3</sup>	N/A	N/A
Northeast Skate	LITTLE SKATE	NEFMC		Unknown		No	No	N/A	N/A
Northeast Skate	WINTER SKATE	NEFMC		Unknown		No	No	N/A	N/A
Atlantic Herring	ATLANTIC HERRING	NEFMC		No		No	No	N/A	N/A
Red Crab	DEEP-SEA RED CRAB	NEFMC		No		Unknown	Unknown	N/A	N/A
Monkfish	MONKFISH - NORTH	NEFMC / MAFMC		Yes <sup>4</sup>		No - rebuilding	No	reduce mortality continue rebuilding <sup>1</sup>	6/10-year plan
	MONKFISH - SOUTH	NEFMC / MAFMC		Yes <sup>4</sup>		No - rebuilding	No	reduce mortality continue rebuilding <sup>1</sup>	6/10-year plan
Spiny Dogfish	SPINY DOGFISH	NEFMC / MAFMC		No		Undefined <sup>5</sup>	Unknown	continue rebuilding	5/5-year plan <sup>6</sup>
Summer Flounder, Scup, and Black Sea Bass	SUMMER FLOUNDER	MAFMC		Yes		No - rebuilding	No	reduce mortality continue rebuilding <sup>1</sup>	5/10-year plan <sup>7</sup>
Summer Flounder, Scup, and Black Sea Bass	SCUP	MAFMC		Yes <sup>8</sup>		No - rebuilding	No	reduce mortality continue rebuilding <sup>1</sup>	disapproved
Summer Flounder, Scup, and Black Sea Bass	BLACK SEA BASS	MAFMC		No		No - rebuilding	No	continue rebuilding <sup>1</sup>	5/10-year plan <sup>7</sup>

Fishery Management Plan	Stock	Jurisdiction	Overfishing? (Is Fishing Mortality above Threshold?)		Overfished? (Is Biomass below Threshold?)		Approaching Overfished Condition?	Management Action Required	Rebuilding Program Progress
			Pre SFA	Post SFA	Pre SFA	Post SFA			
Atlantic Bluefish	<b>BLUEFISH (EXCEPT GULF OF MEXICO)</b>	MAFMC		No		Yes	N/A	continue rebuilding	6/9-year plan
Atlantic Surfclam and Ocean Quahog	<b>SURFCLAM</b>	MAFMC		No		No	No	N/A	N/A
Atlantic Surfclam and Ocean Quahog	<b>OCEAN QUAHOG</b>	MAFMC		No		No	No	N/A	N/A
Atlantic Mackerel, Squid, and Butterfish	<b>SQUID - <i>ILLEX</i></b>	MAFMC		No		Unknown	Unknown	N/A	N/A
	<b>SQUID - <i>LOLIGO</i></b>	MAFMC		No		No	No	N/A	N/A
Atlantic Mackerel, Squid, and Butterfish	<b>ATLANTIC MACKEREL</b>	MAFMC		No		No	No	N/A	N/A
Atlantic Mackerel, Squid, and Butterfish	<b>BUTTERFISH (ATLANTIC)</b>	MAFMC		No		Yes	N/A	rebuilding program	to be developed <sup>9</sup>
Tilefish	<b>GOLDEN TILEFISH</b>	MAFMC		Yes		Yes	N/A	reduce mortality continue rebuilding	4/10-year plan
South Atlantic Golden Crab	<b>GOLDEN CRAB</b>	SAFMC		Unknown		Unknown	Unknown	N/A	N/A
South Atlantic Shrimp	<b>WHITE SHRIMP</b>	SAFMC	No		No		No	N/A	N/A
South Atlantic Shrimp	<b>ROCK SHRIMP</b>	SAFMC	No		No		No	N/A	N/A
South Atlantic Shrimp	<b>BROWN SHRIMP</b>	SAFMC	No		No		No	N/A	N/A
South Atlantic Shrimp	<b>PINK SHRIMP</b>	SAFMC	No		No		No	N/A	N/A
South Atlantic Snapper-Grouper	<b>VERMILION SNAPPER</b>	SAFMC		Yes		Unknown <sup>10</sup>	Unknown	reduce mortality continue rebuilding <sup>11</sup>	6/10-year plan*
South Atlantic Snapper-Grouper	<b>RED SNAPPER</b>	SAFMC		Yes	Yes		N/A	reduce mortality continue rebuilding	13/15-year plan*
South Atlantic Snapper-Grouper	<b>SNOWY GROUPER</b>	SAFMC		Yes		Yes	N/A	reduce mortality continue rebuilding	13/15-year plan*

\* Pre-SFA Rebuilding Plan with a timeline defined.

\*\*Pre-SFA Rebuilding Plan with no timeline defined.

1. This stock is currently above the minimum stock size threshold; however, it was previously below this level and rebuilding must continue until the stock is at a level consistent with MSY.
2. Although this stock was previously listed as not overfished, but rebuilding, it has never been listed as overfished, and therefore, does not require a rebuilding plan. A 2004 U. S. Canada stock assessment for the Georges Bank stock of yellowtail flounder could not definitively estimate stock status. Accordingly, the status of this stock with respect to biomass is unchanged, pending an updated stock assessment.
3. While the biomass level is known, determining whether the stock is approaching an overfished condition requires an additional level of analysis which has not been done.
4. Although this stock is currently listed as overfishing occurring, the most recent assessment (SAW 34) was not able to precisely determine current exploitation rates (although all candidate values were above a candidate  $F_{threshold}$ ). Accordingly, the status of this stock with respect to fishing mortality rate is unchanged, pending an updated stock assessment.
5. There is currently no definition contained in the FMP to make a determination of overfished because there is no approved minimum biomass level; however, based on current NMFS recommended biomass threshold, the biomass estimates indicate the stock is overfished.
6. Although the 5-year rebuilding plan for spiny dogfish expired on 2/10/05, this stock continues to be managed conservatively through low fishing mortality rates and no directed fishery.
7. Last year's report did not provide the correct current year of rebuilding. Amendment 12, which was implemented on 11/26/99, re-started the 10-year rebuilding plan on 1/1/00. Thus, this stock is currently in year 5 of the plan.
8. Although this stock is currently listed as overfishing occurring, the most recent assessment (SAW 35) was not able to precisely determine current exploitation rates. Accordingly, the status of this stock with respect to fishing mortality rate is unchanged, pending an updated stock assessment.
9. The Mid-Atlantic Fishery Management Council was notified on 2/11/05 that this stock is overfished and they are required to submit a rebuilding plan within one year of this date.
10. The most recent SEDAR (South East Data, Assessment and Review) report on vermilion snapper (Second SEDAR Consensus Assessment Report on the assessments of the Status of the Stocks of Vermilion Snapper and Black Sea Bass, February 25-28, 2003) concluded that there was a high degree of uncertainty regarding its status and recommended that it be considered unknown. Although this assessment did not use criteria contained in the FMP, it is regarded the best available information.
11. Although this stock is currently listed as unknown, it was previously listed as overfished. Until a new assessment confirms that it is no longer overfished and the stock size is at a level that is consistent with producing MSY on a long-term basis, it will continue to rebuild under its rebuilding plan.
12. Although the fishery in the EEZ is closed and fishing mortality is likely very low in federal waters, there remains an active fishery in states' waters.

13. The most current assessment for this stock (Muller et al. 2003) has concluded that overfishing is not occurring, nor is it overfished. Although this assessment did not use criteria contained in the FMP, it is regarded as the best available information.
14. The most recent assessment (July 2001 Status of the Vermilion Snapper Fishery in the Gulf of Mexico Report (Assessment 5.0), October 2001 Report of the Reef Fish Stock Assessment Panel, and the Summary of the Standing and Special Reef Fish Scientific and Statistical Committee (January 2002 Council meeting)) concluded that this stock is overfished. To this effect, the Gulf of Mexico Fishery Management Council was notified on October 30, 2003 that this stock is overfished and undergoing overfishing. Although this assessment did not use criteria contained in the FMP, it is regarded as the best available information.
15. Amendment 23, which includes a rebuilding plan for Gulf Vermilion Snapper, has been submitted and is awaiting final approval.
16. The Salmon FMP contains three exceptions to the application of overfishing criteria and subsequent Council actions for stocks or stock complexes with conservation objectives: Exceptions: (1) hatchery stocks, (2) stocks for which Council management actions have inconsequential impacts, and (3) stocks listed under the ESA.
17. Oregon Coastal Natural (OCN) coho are managed subject to the provisions of Amendment 13 to the Salmon FMP. The southern stock complex is listed as a threatened species under the ESA as part of the Southern Oregon / Northern California Coasts Coho ESU (May 6, 1997), and the northern components, Oregon Coast coho, were listed as a threatened species (August 10, 1998); currently both meet exception 3. As a result of recent court rulings ESA restrictions are not being applied to Oregon Coast Coho ESU. However, the OCN stocks have met their management objectives in recent years.
18. Amendment 16–2 to the FMP added the rebuilding parameters for this stock to the FMP, along with other relevant information such as stock distribution, fishery interaction, and rebuilding strategy. NMFS approved Amendment 16–2 on January 30, 2004, and published a final rule for Amendment 16–2 on April 13, 2004 (69 FR 19347). Consequently, this stock is currently rebuilding under management measures that conform to Amendment 16-2. This amendment set target rebuilding dates and harvest control rules for this species in Federal Regulations.
19. Amendment 16–3 to the FMP added the rebuilding parameters for this stock to the FMP, along with other relevant information such as stock distribution, fishery interaction, and rebuilding strategy. NMFS approved Amendment 16–3 on September 13, 2004, and published a final rule for Amendment 16–3 on September 28, 2004 (69 FR 57874). Consequently, this stock is currently rebuilding under management measures that conform to Amendment 16-3. This amendment set target rebuilding dates and harvest control rules for this species in Federal Regulations.
20. Pacific Whiting was declared overfished on April 15, 2002 (67 FR 18117) as a result of the 2002 stock assessment, which estimated that the female spawning biomass was less than 20 percent of the unfished biomass. On April 30, 2004 (69 FR 23667), NMFS announced that the whiting stock was estimated to be above the target rebuilding biomass in 2003 (40 percent of its unfished biomass); therefore, this stock is now rebuilt to levels consistent with Bmsy.
21. Even though this stock is shown to be under the jurisdiction of a single Council and under the management of a single FMP, it is acknowledged that both the Pacific Fishery Management Council and the Western Pacific Fishery Management Council have jurisdiction over this stock, and it is managed under both the West Coast Highly Migratory Species FMP and the Western Pacific Pelagics FMP. The Council indicated here is the lead Council for the purpose of this report.

22. The status of bigeye tuna in the Pacific Ocean has typically been assessed for two separate regions, the eastern Pacific Ocean (EPO) and the western and central Pacific Ocean (WCPO). That approach is based not on the population structure of bigeye tuna in the Pacific (which is not well known), but rather on the areas of authority and interest of regional fishery management organizations and inter-governmental organizations, particularly the Inter-American Tropical Tuna Commission in the EPO and the Secretariat of the Pacific Community (and now the Western and Central Pacific Fisheries Commission) in the WCPO. Lacking evidence of two or more populations of bigeye tuna in the Pacific Ocean, bigeye tuna in the Pacific Ocean are treated as a single stock for the purpose of stock status determination. Although pan-Pacific assessments of bigeye tuna have been conducted in the past and are likely to be conducted in the future, the most current assessments, published in 2004, continued using the two-region approach. The most current pan-Pacific assessment was published in 2003. These status determinations for bigeye tuna in the Pacific as a whole take into account all three assessments.

Although this report treats bigeye tuna throughout the Pacific Ocean as a single stock, the 2004 regional assessments revealed significant differences in the portion of the stock in each of the two regions that have differing management implications. Specifically, fishing mortality (relative to the MSY level) was estimated to be higher in the EPO than in the WCPO and biomass (relative to the MSY level) was estimated to be lower in the EPO than in the WCPO. See Appendix 2 for further details on the assessment results.

23. This complex contains up to 19 species including Seabass - hapuu'upu, Squirrelfish Snapper - ehū, Longtail Snapper - onaga, Silver Jaw Jobfish - lehi, Gray Jobfish - uku, Blueline Snapper, Yellowtail Snapper - yellow tail kalekale, Crimson jobfish - opakapaka, Yelloweye Snapper - yelloweye opakapaka, Von Siebolds Snapper - kalekale, Oblique-Banded Snapper - gindai, Giant Trevally - white ulua, Black Jack - black ulua, Thick Lipped Trevally - pig ulua, Amberjack - kahala, Blacktip Grouper, Lunartail Grouper, Ambon Emperor, and Redgill Emperor.

24. This complex contains up to 146 "currently harvested coral reef taxa" and innumerable "potentially harvested coral reef taxa."

25. Bigeye and mackerel scads in Hawaii are predominantly harvested by plane-directed purse seine (a delimited gear type) and are amenable to a catch-based stock assessment pending update beyond 1997, the most recent catch records used in the preliminary assessment done by Weng and Sibert (2000. Analysis of the fisheries for two pelagic carangids in Hawaii. SOEST 00-04. JIMAR Contribution 00-332).

26. Although the assessment for sablefish is based on aggregated data from the Gulf of Alaska, Bering Sea, and Aleutian Islands, the species is managed separately in these three regions, with separate overfishing levels, ABCs, and TACs based on the proportion of biomass in each respective region. Therefore, separate status determinations are made for sablefish in these three regions.

27. Although the assessment for Pacific ocean perch is based on aggregated data from throughout the Gulf of Alaska, the species is managed separately in the Western, Central, and Eastern areas, with separate overfishing levels, ABCs, and TACs based on the proportion of biomass in each respective area. Therefore, separate status determinations are made for Pacific ocean perch in these three areas.

28. The Pelagic Shelf Rockfish Complex consists of the following stocks: Dark Rockfish, Light Dusky Rockfish, Widow Rockfish, and Yellowtail Rockfish. The overfished determination is based on dusky rockfish as an indicator species; the overfishing determination is based on the OFL, which is computed by using the dusky rockfish assessment combined with abundance estimates for the remainder of the complex.

29. The Deep Water Flatfish Complex consists of the following stocks: Deepsea Sole, Dover Sole, and Greenland Turbot. The overfished determination is based on dover sole as an indicator species; the overfishing determination is based on the OFL, which is computed by using the dover sole assessment combined with abundance estimates for the remainder of the complex.

30. The Thornyhead Rockfish Complex consists of the following stocks: Longspine Thornyhead and Shortspine Thornyhead. The overfishing determination is based on the OFL, which is computed using abundance estimates of Shortspine Thornyhead.

31. The Shortraker / Rougheye Rockfish Complex consists of the following stocks: Rougheye Rockfish and Shortraker Rockfish. The overfishing determination is based on the OFL, which is computed by using separate estimates of each rockfish and then abundance estimates are added together for the complex.

32. The Demersal Shelf Rockfish Complex consists of the following stocks: Brown Rockfish, Black Rockfish, Puget Sound Rockfish, Yelloweye Rockfish, Canary Rockfish, China Rockfish, Copper Rockfish, Quillback Rockfish, Rosethorn Rockfish, and Tiger Rockfish. The overfishing determination is based on the OFL, which is computed by using estimates of Yelloweye Rockfish and then increased by 10% to account for the remaining members of the complex.

33. The Slope Rockfish Complex consists of the following stocks: Bocaccio, Chilipepper, Darkblotched Rockfish, Greenstriped Rockfish, Harlequin Rockfish, Pygmy Rockfish, Redbanded Rockfish, Redstriped Rockfish, Silvergray Rockfish, Sharpchin Rockfish, Splitnose Rockfish, Stripetail Rockfish, Vermilion Rockfish, and Yellowmouth Rockfish. The overfishing determination is based on the OFL, which is computed by using abundance estimates of the complex.

34. The Shallow Water Flatfish Complex consists of the following stocks: Butter Sole, Sand Sole, Starry Flounder, Yellowfin Sole, English Sole, Alaska Plaice, Rock Sole - Northern stock, Rock Sole - Southern stock, Speckled Sanddab, Curlfin Sole, Pacific sanddab, C-O Sole, Slender Sole, and Petrale Sole. The overfishing determination is based on the OFL, which is computed by using abundance estimates of the complex.

35. The Skate Complex consists of the following stocks: Longnose Skate, and Big Skate, Alaska Skate, Aleutian Skate, Sandpaper Skate, Commander Skate, Whiteblotched Skate, Roughtail Skate, and Mud Skate. Abundance indicator species are Big Skate and Longnose Skate; the abundance of the remaining skates in the complex are estimated. The overfishing determination is based on 3 separate OFLs, which is computed using these 3 separate abundance estimates.

36. The Other Species Complex consists of the following stocks: Pacific Sleeper Shark, Salmon Shark, Spiny Dogfish Shark, Armorhead Sculpin, Bigmouth Sculpin, Dusky Sculpin, Great Sculpin, Red Irish Lord, Yellow Irish Lord, Ribbed Sculpin, Roughspine Sculpin, Spinyhead Sculpin, Tadpole Sculpin, Plain Sculpin, Scissortail Sculpin, Spectacled Sculpin, Highbrow Sculpin, Spotfin Sculpin, Threadfin Sculpin, Northern Sculpin, Darter Sculpin, Slim Sculpin, Thorny Sculpin, Wide-eye Sculpin, Spatulate Sculpin, Roughskin Sculpin, Threaded Sculpin, Antlered Sculpin, Shorthorn Sculpin, Blackfin Hookear Sculpin, Hookhorn Sculpin, Crested Sculpin, Eyeshade Sculpin, Smoothcheek Sculpin, Whitetail Sculpin, Darkfin Sculpin, Giant Blobsculpin, Soft Sculpin, Smoothskin Octopus, Flapjack Devilfish, Vampire Squid, Giant Pacific Octopus, Squid Berryteuthis anonychus, Squid Berryteuthis magister, Squid Chiroteuthis (Chirothauma) calyx, Squid Eogonatus tinro, Squid Galiteuthis phyllura, Boreopacific Armhook Squid, Squid Gonatopsis makko, Clawed Armhook Squid, Squid Gonatus middendorffi, Squid Gonatus madokai, Squid Gonatus berryi, Squid Gonatus pyros, California Market Squid, Squid Moroteuthis robusta, Squid Onychoteuthis borealijaponicus, and Eastern Pacific Bobtail Squid. There is no OFL specified for this complex. The TAC is based on a percentage of the combined TACs for the remainder of the groundfish fishery.

37. The Other Rockfish Complex consists of the following stocks: Shortspine Thornyhead, Dark Rockfish, Sharpchin Rockfish, Harlequin Rockfish, Redbanded Rockfish, Broadfin Thornyhead, Light Dusky Rockfish, and Redstripe Rockfish. The overfishing determination is based on the OFL, which is computed by using abundance estimates of the complex.

38. The Other Flatfish Complex consists of the following stocks: Bering Flounder, Kamchatka Flounder, Arctic Flounder, Butter Sole, Deepsea Sole, Dover Sole, English Sole, Longhead Dab, Rex Sole, Roughscale Sole, Sand Sole, and Starry Flounder. The overfishing determination is based on the OFL, which is computed by using abundance estimates of the complex.

39. The Squid Complex consists of the following stocks: Squid *Berryteuthis anonychus*, Squid *Berryteuthis magister*, Squid *Chiroteuthis (Chirothauma) calyx*, Squid *Eogonatus tinro*, Squid *Galiteuthis phyllura*, Giant or Robust Clubhook Squid, Eastern Pacific Bobtail Squid, Boreopacific Armhook Squid, Clawed Armhook Squid, Squid *Gonatopsis makko*, Squid *Taonius pavo*, Squid *Gonatus middendorffi*, Squid *Gonatus madokai*, Squid *Gonatus pyros*, and Squid *Gonatus berryi*. The overfishing determination is based on the OFL, which is computed by using average historical catch.
40. The Other Species Complex consists of the following stocks: Roughspine Sculpin, Spectacled Sculpin, Northern Sculpin, Scaled Sculpin, Slim Sculpin, Smallplate Sculpin, Sponge Sculpin, Thorny Sculpin, Blacknose Sculpin, Wide-eye Sculpin, Uncinate Sculpin, Spatulate Sculpin, Roughskin Sculpin, Strangeline Sculpin, Purplegray Sculpin, Arctic Staghorn Sculpin, Threaded Sculpin, Hairhead Sculpin, Belligerent Sculpin, Warty Sculpin, Brightbelly Sculpin, Flabby Sculpin, Broadfin Sculpin, Blackfin Hookear Sculpin, Spinyhook Sculpin, Hamecon, Hookhorn Sculpin, Okhotsk Hookear Sculpin, Eyeshade Sculpin, Shortmast Sculpin, Smoothcheek Sculpin, Whitetail Sculpin, Darkfin Sculpin, Soft Sculpin, Giant Blobsculpin, Smoothskin Octopus, Vampire Squid, Pacific Sleeper Shark, Salmon Shark, Alaska Skate, Aleutian Skate, Sandpaper Skate, Commander Skate, Whiteblotched Skate, Roughtail Skate, Mud Skate, Whitebrow Skate, Antlered Sculpin, Armorhead Sculpin, Bigmouth Sculpin, Butterfly Sculpin, Crested Sculpin, Great Sculpin, Plain Sculpin, Red Irish Lord, Ribbed Sculpin, Scissortail Sculpin, Spinyhead Sculpin, Tadpole Sculpin, Thorny Sculpin, Yellow Irish Lord, Flapjack Devilfish, and Giant Pacific Octopus. The overfishing determination is based on the OFL, which is computed by using abundance estimates of skates and sculpins and average historical catch for sharks and octopus.
41. For the overfished Atlantic bigeye tuna, the HMS FMP established the foundation to develop an international 10-year rebuilding program. While steps have been taken internationally to pursue recovery of this stock, an international rebuilding program has not yet been adopted. NMFS is continuing to work through ICCAT to establish an international rebuilding program and is working domestically to monitor its fisheries and promote conservation.
42. Although the last conclusive assessment conducted in 2000 determined that overfishing was occurring for this stock, total landings have been 33,754, 25,186, 22,617, and 25,516 t for the years 2000-2003, respectively. The TAC for this stock is 34,500 t, which is the replacement yield; if landings are below 31,000 t, the biomass is expected to rebuild for this stock.
43. For the overfished North Atlantic albacore, NMFS is working through ICCAT to establish an international rebuilding program. Domestically, NMFS is monitoring its fisheries and promoting conservation.
44. International rebuilding program implemented in 1999. The SCRS conducted an assessment in summer 2002 but that assessment had not been officially adopted by ICCAT.
45. International rebuilding program implemented in 2000.
46. This stock is part of the Large Coastal Shark Complex, but is assessed separately.
47. In addition to Sandbar Shark and Blacktip Shark, the Large Coastal Shark Complex also consists of additional stocks that cannot be retained in commercial or recreational fisheries, which include: Spinner Shark, Silky Shark, Bull Shark, Tiger Shark, Lemon Shark, Nurse Shark, Scalloped Hammerhead Shark, Great Hammerhead Shark, Smooth Hammerhead Shark, Dusky Shark, Bignose Shark, Galapagos Shark, Night Shark, Caribbean Reef Shark, Narrowtooth Shark, Sand Tiger Shark, Bigeye Sand Tiger Shark, Whale Shark, Basking Shark, White Shark. Status determinations were made for the complex by using the assessments of Sandbar Shark and Blacktip Shark.
48. This stock is part of the Small Coastal Shark Complex, but is assessed separately.

49. In addition to Atlantic Sharpnose Shark, Blacknose Shark, Bonnethead Shark, and Finetooth Shark, the Small Coastal Shark Complex also consists of: Atlantic Angel Shark, Caribbean Sharpnose Shark, and Smalltail Shark; these 3 species cannot be retained in recreational or commercial fisheries.

50. This stock is part of the Pelagic Shark Complex, but is assessed separately.

51. In addition to Shortfin Mako Shark, Blue Shark, and Porbeagle Shark, the Pelagic Shark Complex also consists of: Oceanic Whitetip Shark and Thresher Shark. This complex also consists of stocks that cannot be retained in recreational or commercial fisheries, which include: Bigeye Thresher Shark, Bigeye Sixgill Shark, Longfin Mako Shark, Sevengill Shark, and Sixgill Shark.

**Table B. Summary of stock status for minor species contained in federal fishery management plans.**

Fishery Management Plan	Stock	Jurisdiction	Overfishing? (Is Fishing Mortality above Threshold?)		Overfished? (Is Biomass below Threshold?)		Approaching Overfished Condition?	Management Action Required	Rebuilding Program Progress
			Pre SFA	Post SFA	Pre SFA	Post SFA			
Atlantic Salmon	Atlantic Salmon	NEFMC		No		Yes	N/A	rebuild-ESA listed	not required <sup>1</sup>
Northeast Multispecies	Ocean Pout	NEFMC		No		Yes	N/A	continue rebuilding	1/10-year plan

\*Pre-SFA Rebuilding Plan with a timeline defined.

\*\*Pre-SFA Rebuilding Plan with no timeline defined.

1. A formal rebuilding program was not required or submitted because either no fishing is allowed in this fishery, or incidental harvest is limited to levels necessary to meet Endangered Species Act (ESA) requirements. A recovery plan under the ESA is being developed.
2. There is currently not enough information available to develop a rebuilding plan.
3. Although the biomass level is known, determining whether the stock is approaching an overfished condition requires an additional level of analysis which has not been done.
4. Exact rebuilding time period unspecified in FMP. Rebuilding may take decades, based on the long-lived, late maturing, and low fecundity nature of this species.
5. Fishery in the EEZ is closed; therefore, fishing mortality is very low.
6. On July 11, 2003, NMFS partially approved the FMP for this stock. Although one of the disapproved provisions included the MFMT, a component of the overfishing definition, an examination of the rate of harvest (currently zero), relative to the approved MSY level (100,000 mt), indicates that overfishing is not occurring. In addition, no directed fishery for this stock currently exists. This species has the capacity to increase its biomass through vegetative growth by as much as 10 percent per day, thus doubling its biomass every two weeks. Therefore, it is unlikely that this stock is overfished.
7. The Salmon FMP contains three exceptions to the application of overfishing criteria and subsequent Council actions for stocks or stock complexes with conservation objectives: Exceptions: (1) hatchery stocks, (2) stocks for which Council management actions have inconsequential impacts, and (3) stocks listed under the ESA.
8. The Smith River Chinook is not part of the California Coastal Chinook ESU, which includes the Eel, Mattole, and Mad River stocks. However, there are no conservation objectives defined for the northern coastal chinook stocks. These stocks are managed consistent with NMFS jeopardy standard / recovery plans for the California Coastal Chinook ESU. The Smith River stock is therefore also managed under the NMFS jeopardy standard / recovery plans.
9. Amendment 14 to the Salmon FMP added these stocks to the list of stocks managed under the FMP but did not identify conservation objectives. The PFMC has not yet developed an objective. Prior to Amendment 14, Klamath River spring chinook were regarded as one of several sub-basin stocks protected by the Klamath River fall chinook objective. The NMFS chinook status review included Klamath River fall and spring chinook as part of the same ESU.
10. The PFMC manages these fisheries consistent with provisions of the Pacific Salmon Treaty. These stocks originate from either U.S. or Canadian waters and are managed as mixed stock fisheries.
11. Amendment 16–3 to the FMP added the rebuilding parameters for this stock to the FMP, along with other relevant information such as stock distribution, fishery interaction, and rebuilding strategy. NMFS approved Amendment 16–3 on September 13, 2004, and published a final rule for Amendment 16–3 on September 28, 2004 (69 FR 57874). Consequently, this stock is currently rebuilding under management measures that conform to Amendment 16-3. This amendment set target rebuilding dates and harvest control rules for this species in Federal Regulations.
12. The management unit includes *Auxis* spp. (frigate mackerels), *Allothunnus* spp. (slender tunas), and *Scomber* spp. (mackerels).
13. This complex contains up to 5 species including Red Spiny Lobster, Green Spiny Lobster, Common Slipper Lobster, Chinese Slipper Lobster, and Giant Slipper Lobster.
14. The fishery has been closed since 1999 and fishing mortality has been virtually zero since then.
15. This complex contains up to 12 taxa including *Corallium secundum*, *Corallium regale*, *Corallium laauense*, *Gerardia* spp., *Callogorgia gilberti*, *Narella* spp., *Calyptrophora* spp., *Lepidisis olapa*, *Acanella* spp., *Antipathes grandis*, *Antipathes dichotoma*, and *Antipathes ulex*.

16. There has been virtually no fishing for this stock since 2001 and fishing mortality has been virtually zero since then.
17. This complex contains up to 3 species including *Antipathes grandis*, *Antipathes dichotoma*, and *Antipathes ulex*.
18. This stock complex uses pelagic armorhead as the indicator species of a three-species seamount groundfish complex that includes raftfish and alfonsin.
19. Post-SFA overfishing/overfished definitions were approved in 2003 for the seamount groundfish stock complex, for which pelagic armorhead is assessed as the indicator species, but determinations have not yet been made relative to those new definitions.
20. This stock complex does not have a formal rebuilding plan or time period for rebuilding. The fishery in the U.S. EEZ has been closed under sequential 6-year moratoria since the inception of the FMP in 1986. The current moratorium is effective until 2010. These moratoria have been treated by NMFS as a de facto rebuilding plan, and previous versions of this report referred to the cumulative period of these moratoria as the time period for rebuilding. The WPFMC is currently considering more permanent conservation and management measures for this stock complex.
21. This complex contains up to 19 species including Seabass - hapuu'upu, Squirrelfish Snapper - ehu, Longtail Snapper - onaga, Silver Jaw Jobfish - lehi, Gray Jobfish - uku, Blueline Snapper, Yellowtail Snapper - yellow tail kalekale, Crimson jobfish - opakapaka, Yelloweye Snapper - yelloweye opakapaka, Von Siebolds Snapper - kalekale, Oblique-Banded Snapper - gindai, Giant Trevally - white ulua, Black Jack - black ulua, Thick Lipped Trevally - pig ulua, Amberjack - kahala, Blacktip Grouper, Lunartail Grouper, Ambon Emperor, and Redgill Emperor. Assessments are made for multi-species stock complexes, one complex for each of American Samoa, Guam, and the Hawaiian Archipelago.
22. This complex contains up to 146 "currently harvested coral reef taxa" and innumerable "potentially harvested coral reef taxa."
23. This complex contains up to 146 "currently harvested coral reef taxa" and innumerable "potentially harvested coral reef taxa." The Pacific remote island areas (PRIA) are U.S. island possessions in the Pacific Ocean that include Palmyra Atoll, Kingman Reef, Jarvis Island, Baker Island, Howland Island, Johnston Atoll, Wake Island, and Midway Atoll. All reefs of the PRIA except Wake Island, which is under the jurisdiction of the Department of Defense, are National Wildlife Refuges. Fishing for coral reef-associated species is prohibited in all these areas except Palmyra Atoll, Johnston Atoll, Wake Island, and Midway Atoll.
24. For the overfished North Atlantic blue and white marlins, Amendment One to the Atlantic Billfish FMP established a foundation to develop an international rebuilding plan. An international rebuilding plan with a two-phase approach was adopted in 2000 by ICCAT; Phase I has been implemented, while the United States continues to work toward its full implementation. It should be noted that the ICCAT rebuilding program does not satisfy all the requirements of the Magnuson-Stevens Act. NMFS is continuing to work domestically to monitor its fisheries and promote conservation. The SCRS conducted an assessment of white marlin in spring 2002.
25. For overfished sailfish, Amendment One to the Atlantic Billfish FMP established the foundation to develop an international 10-year rebuilding program. While steps have been taken internationally to pursue recovery of the overfished west Atlantic sailfish stock, an international rebuilding program has not yet been adopted. NMFS is continuing to work through ICCAT to establish an international rebuilding program and is working domestically to monitor its fisheries and promote conservation.
