## ***Argentina: Soybean Exports Decline Once Again as Soybean Crush Continues to Increase***

Note: Based on Local Year data

- Argentina's 2005/06 soybean exports were reduced 2 million tons to 7.3 million tons as exports from April through July were the lowest levels in 6 years. Argentina's 2006/07 soybean exports were also reduced to supply the increase in soybean crush in 2006/07.
- Brazil's 2005/06 soybean exports were increased 1.45 million tons to 26.75 million tons as exports for July and August were up 1.8 million tons over year ago levels.
- China's 2005/06 soybean imports were increased 200,000 tons to 27.7 million tons. China's 2006/07 imports were increased 500,000 tons to 32 million tons as soybean production in 2006/07 was reduced.
- China's 2005/06 soybean oil imports were reduced 150,000 to 1.6 million tons. Imports for 2006/07 were also reduced 100,000 to 1.8 million tons.
- Global oilseed stocks in 2006/07 increased 2.3 million ton, as U.S. soybean stocks increased 2.2 million tons.
- U.S. soybean exports in 2005/06 were increased 408,000 tons to 25.7 million tons. The 2006/07 production forecast was increased 4.5 million tons, resulting in a 1 million ton increase in U.S. soybean exports to 30.6 million tons and a 2.2 million ton increase in stocks to 14.4 million tons.
- India's 2005/06 soybean oil imports were increased 250,000 tons to 1.95 million tons and palm oil imports were lowered 200,000 tons to 3.1 million tons. India's soybean oil import forecast for 2006/07 was raised by 150,000 tons to offset reduced production of peanut oil and cottonseed oil.
- EU-25 soybean oil imports in 2005/06 were increased 125,000 tons to 725,000 tons; likewise the 2006/07 forecast increased 125,000 tons to 900,000 tons. The growth in imports is being driven by the increased use of soybean oil in biodiesel.
- Romania and Bulgaria 2006/07 sunflowerseed production increased resulting in a combined 245,000 ton increase in the export forecast. The increase was partially offset by a 100,000 ton decline in Russia's exports as sunflowerseed production declined.

## Special Articles

### *Demand Shifts from Imported Soybeans to Soybean Meal*

#### Increased Concentration in Soybean Trade

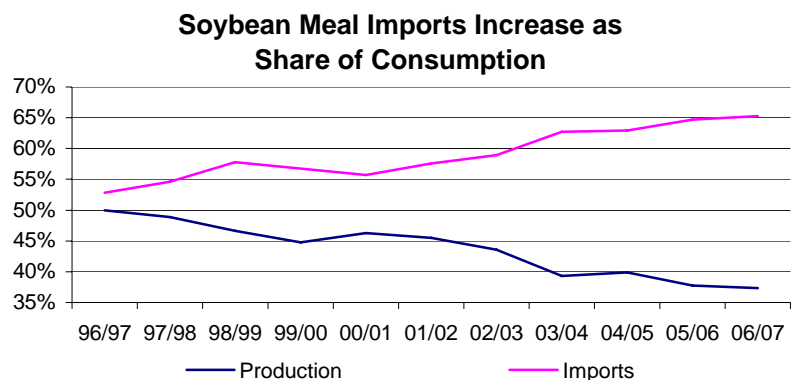

Soybean meal imports to almost every country have grown over the last five years. However, the growth in meal imports has limited demand for imported soybeans in some countries. The countries that used to import and process soybeans are now consuming less soybean oil as a share of total oil. While soybeans and soybean oil imports at a global level have experienced strong growth over the last 5 years, the growth has been concentrated in a few countries.

<b>China and Rest of World Soybean Imports</b>				
<b>(Million Tons)</b>				
	<b>China</b>		<b>Rest of World</b>	
	2001/02	2006/07	2001/02	2006/07
Imports	10.3	32	44.1	37.6
Percent of World	19.1%	46.1%	80.9%	53.9%

In 2006/07, China's soybean imports are forecast to increase 21.7 million tons compared to 2001/02 levels. China's increase occurred as the rest of the world's soybean imports declined 6.5 million tons, causing global imports to only increase 14.9 million tons over the same period. As soybean imports by other major importers have declined, their soybean meal imports are forecast to increase 10.7 million tons (27 percent) from 2001/02 levels to 51.3 million tons in 2006/07.

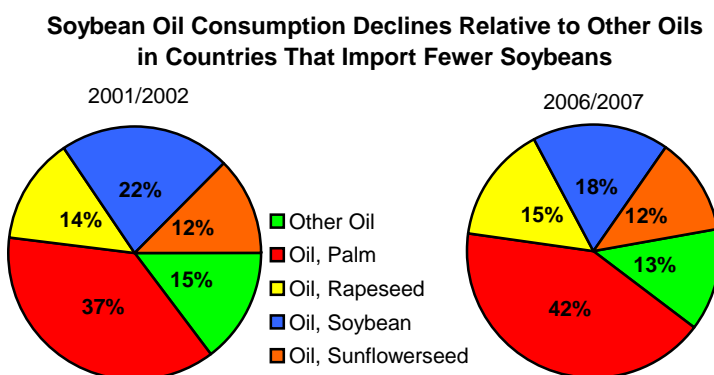

#### Importers Move from Soybeans to Soybean Meal

Excluding China, protein meal equivalent consumption for net soybean importers has risen an estimated 35 million tons from 1996/97 through 2006/07. During this time soybean meal imports accounted for much of the growth increasing 27.2 million tons over the same period. Large quantities of relatively cheap soybean meal available on the market have made it more attractive to import soybean meal rather than crush the soybeans domestically. Over the last few years a number of major soybean importers, including the European Union and Southeast Asia, have begun to change their preference from importing soybeans to importing soybean meal. This change has led to soybean meal imports rising from 53 percent of soybean meal consumption in net soybean importing countries in 1996/97 to more than 65 percent of consumption in 2006/07. The increase in soybean meal imports has contributed to a number of countries reducing soybean crush and therefore reducing soybean oil production.

## Majority of Countries Shift from Soybean Oil to Other Vegetable Oils

The switch from imported soybeans to imported soybean meal has attributed to countries reducing their consumption of soybean oil relative to other oils. In a number of markets, cheaper palm oil began replacing what used to be growth in consumption of soybean oil. From 2001/02 through 2006/07 palm oil consumption in net soybean importing countries, excluding China, rose more than 9 million tons. The strong growth in palm oil consumption occurred primarily in Southeast Asia, where palm oil imports rose 3.5 million ton as soybean imports declined 10 percent over the last five years. Despite increases in imports, Europe's soybean oil imports continue to loose share of the total oil market as soybean imports have declined more than 25 percent over the last five years. Increases in Europe's palm and rapeseed oil consumption have caused soybean oil to loose market share.

While soybean oil consumption is down in the majority of markets; soybean oil consumption in the world's two largest markets India and China is increasing relative to other oils. China's soybean oil consumption has risen 4.3 million tons over the last five years from 28 percent of total oil consumption in 2001/02 to 37 percent in 2006/07. India's soybean oil consumption has also increased 683,000 MT over the same time period to 24 percent of total oil consumption. Since 2001/02, China and India have accounted for more than 84 percent of the growth in soybean oil imports. India is expected to continue increase its soybean oil consumption as income and population continue to grow.

## Canada: Oilseeds and Product Overview

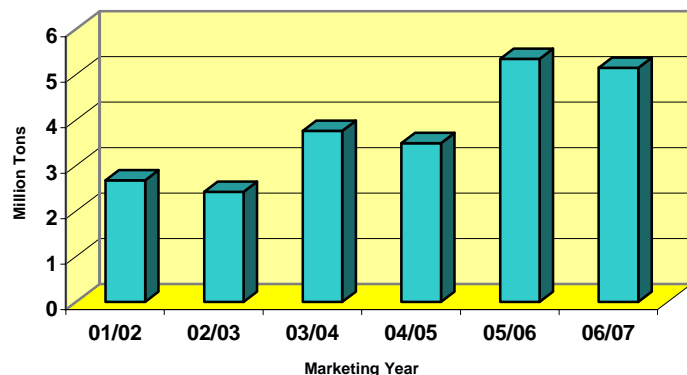

Canada's 2006/07 exports of rapeseed and products are forecast to mirror the pace set in 2005/06 despite a decline from last year's record harvest. Growing biodiesel use continues to impact demand for rapeseed and rapeseed oil as the U.S., Europe and other regions expand biodiesel production capacity. Demand in the food sector, particularly in the U.S. and other industrialized nations, remains strong as manufacturers switch to rapeseed oil and its lower level of trans-fats. Canada's soybean exports are also forecast to reach record levels in 2006/07 despite an expected decline in 2006 production. Canada's continued efforts to market identity preserved (IP) soybeans in Europe and Japan has helped grow interest in Canadian soybeans, particularly in the food sector. This export growth contrasts with the relatively stable domestic market for oilseeds and products in Canada. Interest in developing biodiesel in Canada has lagged behind efforts in other countries due to their position as a net energy exporter. Canada's small population relative to the U.S. also limits potential domestic growth and encourages producers to look towards the U.S., Europe, and Asia to expand sales.

### Food and Fuel Demand Spur Rapeseed Exports

Canada is forecast to export 5.2 million tons of rapeseed in 2006/07. While this is below the record 5.4 million tons estimated for 2005/06, it will still rank as the second largest export volume if realized. Ample supplies following last season's record 9.7 million ton crop helped boost exports in 2005/06. This season's forecast 8.0 million ton crop, the third largest on record, coupled with more than 2 million tons carried over from the current year, should provide ample supplies to meet export demand.

Europe's growing demand for biodiesel has indirectly contributed to the growth in Canada's exports. While exports to Europe are discouraged due to the presence of varieties not yet approved in the EU-25, declining EU exports along with growing imports from Australia have forced other importers to turn to Canadian rapeseed. Japan remains Canada's largest export market accounting for 40 percent of total exports in 2005/06. Other major markets in 2005/06 include Mexico, the United States, China and Pakistan. The UAE is expected to account for nearly 200,000 tons of exports in 2005/06 as a recently completed crush facility produces meal and oil for Middle East and European markets.

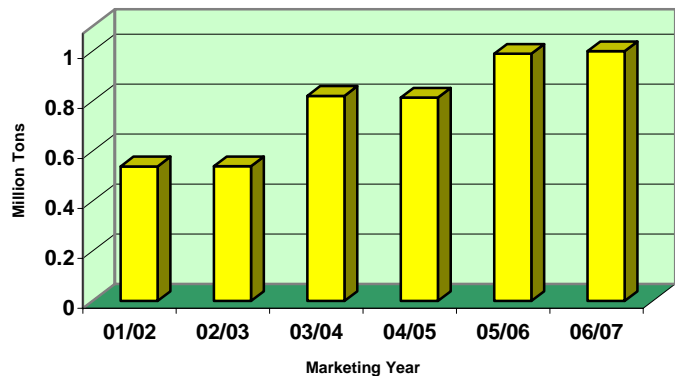

Canadian Rapeseed Exports

## U.S. and EU Demand Push Rapeseed Oil Exports to Record

Canadian rapeseed oil exports are forecast to match this year's record pace in 2006/07. Exports in both years are expected to reach 1.0 million tons. Demand in the U.S., which accounted for 60 percent of Canada's exports in 2005/06, is forecast to grow as manufacturers continue to turn to rapeseed oil in food products. Growing demand for biodiesel should also help boost demand. In 2005/06, Canada exported more than 200,000 tons of rapeseed oil to the EU. This is up from less than 1,000 tons in the previous year. Limited processing capacity and surging demand for biodiesel in Europe prompted the increase with continued exports to the EU likely in 2006/07. Volume growth in Canadian rapeseed oil exports will be limited beyond 2006/07 without an increase in domestic crush capacity. With current full utilization of capacity approaching 3.5 million tons yielding approximately 1.4 million tons of rapeseed oil, there is little room to expand exports short of diverting oil from the Canadian market.

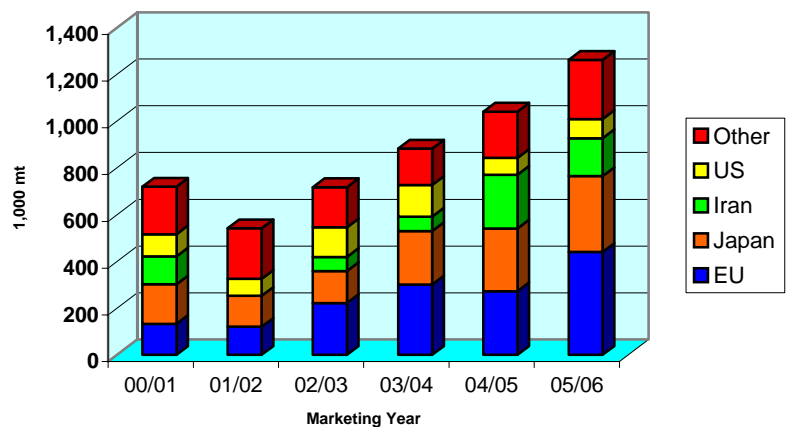

### Canadian Rapeseed Oil Exports

## Soybean Exports Continue to Grow

Canada's soybean exports are forecast to reach nearly 1.3 million tons in 2006/07. This is nearly 50,000 tons above the estimate for 2005/06 and would be a record export volume. In 2005/06, Europe accounted for nearly 35 percent of total export volume while exports to Japan totaled an additional 25 percent. Combined, exports to these two markets have climbed nearly 50 percent since 2003/04. This growth can be attributed to a decision by Canadian growers to focus on identity preserved (IP) soybeans. Interest in IP soybeans is especially strong in both the EU and Japan where consumer preferences discourage the use of biotech soybeans in food products. The decision in 2005 to allow legal cultivation of biotech varieties in Brazil has further enhanced demand for Canadian and other IP soybeans.

1/Totals are based on an October-September basis.

2/ Utilization includes exports of further processed products and refining losses and therefore is higher than the actual level.

3/ Quarterly export data may not add to year total because quarterly import data is not available.

4/ Preliminary

5/ Forecast

6/ Net exports: excluding palm and fatty acid distillates.
