## ***China: 2005/06 Soybean Imports Continue to Strengthen As August Imports Exceed 3 Million Tons***

- China's 2005/2006 soybean import forecast increased 500,000 tons this month to 28.2 million tons as October – August imports reached a record 26.5 million tons.
- United States' 2005/06 soybean production declined 681,000 tons this month to 83.4 million tons, causing soybean stocks to fall to 12.2 million tons.
- EU 2005/06 soybean imports were reduced 200,000 tons to 13.9 million tons, and crush was reduced 400,000 tons to 13.25 million tons. The slow pace of soybean imports and crush in the EU led to reductions in 2005/06 estimates. Improved soybean crush margins relative to rapeseed in 2006/07 should provide some support for higher soybean imports and crush in the out year.
- United States' 2006/07 soybean production is forecast to reach 86 million tons, up 2.6 million tons from the September forecast. This increase led to a 544,000 tons increase in exports, to a record 31.2 million tons.
- Global soybean ending stocks for 2006/07 are forecast to increase 2.6 million tons, to 55.1 million tons.
- Thailand's 2006/07 protein meal use is forecast to rise nearly 6 percent to 4.2 million tons, the same level before the 2003 Avian Influenza outbreaks.
- EU 2006/07 rapeseed crush forecast was increased 450,000 tons this month to 16.1 million tons, as rapeseed production is forecast to reach 15.5 million tons, up 670,000 tons from the previous estimate.

## *Thailand's Protein Meal Use is on the Rise*

For 2006/07, total protein meal use is projected to rise nearly 6 percent to 4.2 MMT (soybean meal equivalent), fully recovering to the level before the Avian Influenza outbreaks in 2003. The outbreaks dampened the country's feed consumption, sharply reducing demand for soybean meal, the primary protein meal used in poultry feed. The recovery in protein meal consumption has been increasingly met by imported soybean meals instead of soybeans crushed domestically. In 2005/06, soybean meal imports totaled 2.04 MMT, accounting for 62 percent of soybean meal consumption compared to 54 percent a year ago when imports were 1.73 MMT and consumption was at 3.2 MMT. Thai's soybean meal imports are mainly from Brazil, Argentina, and India. For 2006/07, Thailand's soybean meal imports are forecast at 2.2 MMT. The increase in soybean meal imports are due partly to lower price in the world market (see Table 34: Protein Meal Prices) even with a 4-percent tariff. Thailand imposes no duty on soybean imports from WTO members, Cambodia, Burma, and Laos while it assesses a 4-percent duty on soybean meal.

## Thailand's Protein Meal Use (SME) is on the Rise

## Special Articles

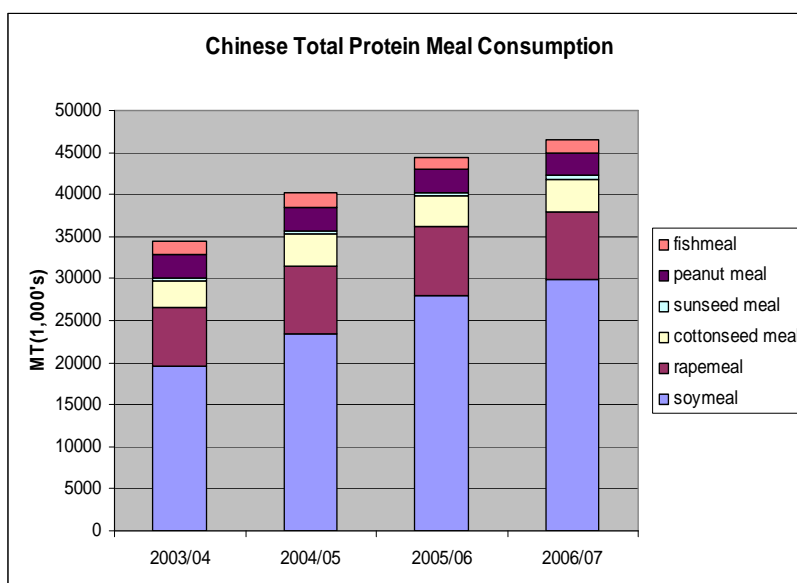

### *China: Oilseeds Market Outlook*

China's Gross Domestic Product growth rate in 2005 was recently revised upward to 10.2 from 9.9 percent by China's National Bureau of Statistics. Estimates for the first and second quarter 2006 GDP growth are 10.3 and 11.3 percent respectively. Although the Government is making efforts to keep the Chinese economy from overheating, GDP is likely to grow by at least 10 percent for the fourth consecutive year.

#### *Soybean Meal Consumption Continues Upward Growth*

As urban and rural incomes increase, meat and seafood protein demand will continue strong in the next marketing year and beyond, although the rate of growth is expected to moderate. While overall poultry production is expected to continue growing, the pace will slow from previous years. Some demand shifted away from poultry consumption in favor of pork due to bird flu concerns. Pork production is expected to grow 5 percent in CY 2006 and 2007, which is slightly lower than previous years. In CY 2003 and 2004, pork prices appreciated driven by consumer demand. This led farmers to increase pork production, which in turn led to overproduction and an ensuing price decline and reduced profitability. Therefore, the rate of growth of pork production will slow for the remaining half of 2006 and into 2007.

With animal meat production growth slowing, protein meal consumption growth rates in 2006/07 will also slow. Although the growth rate of protein meal consumption over the last four years averaged 10.8 percent, the 2006/07 forecast growth rate is 7 percent. Soymeal consumption is capturing most of the consumption growth, while other protein meal consumption has remained relatively flat. With China's excess crushing capacity and limited soybean crop expansion opportunities, soybean imports are expected to continue increasing to meet the growing needs of the livestock and poultry sector.

#### *Chinese Vegetable Oil Consumption Continues to Grow*

In the last 7 years, China's per capita vegetable oil consumption almost doubled from 9.5 kg per person per year in 1999/00, to a forecast 17.1 kg in 2006/07. China's per capita vegetable oil consumption has reached levels similar to Japan and South Korea in a relatively short time. If China's per capita oil consumption were to reach that of the Taiwanese, China would consume 52 percent more vegetable oil, or 35 million tons in 2006/07 instead of the 23 million tons estimated. A large portion of the vegetable oil growth is being captured by restaurants. China's growing middle class, with its increasing disposable income, eats more meals outside the home.

Japan	16.8	17.7	5%
South Korea	13.4	17.5	31%
Taiwan	24.7	26.5	7%
China	9.5	17.1	80%

\*forecast

Soybean and palm oil dominate China's vegetable oil market. Soybean oil's expected market share in 2006/07 is 37 percent, a 10 percent increase in consumption from last year. Palm oil's market share is forecast to grow 2 percentage points over the current year to 24 percent and is expected to grow 14 percent year-over-year. The import duty on vegetable oils is 9 percent. The growth in other vegetable oils is forecast fairly constant for year-over-year levels. Palm oil demand is increasing primarily due to lower price along with its use in processed foods, for example, packaged ready-to-eat noodles. The low shipping costs for imported Indonesian and Malaysian palm oil give it an advantage over imported soybean oil. The growth in soybean oil consumption will be captured primarily by domestic crushing facilities using imported soybeans.

1/Totals are based on an October-September basis.

2/ Utilization includes exports of further processed products and refining losses and therefore is higher than the actual level.

3/ Quarterly export data may not add to year total because quarterly import data is not available.

4/ Preliminary

5/ Forecast

6/ Net exports: excluding palm and fatty acid distillates.
