# World Agricultural Production

## European Union: Estimated Corn Yield Lowest Since 2003 Drought

The USDA forecasts 2007/08 European Union (EU-27) corn production at 48.4 million tons, 6.8 million below last month's estimate and 9.2 million below the five-year average.

Harvested area is forecast at 8.4 million hectares, 0.2 million below last month and 0.3 million below last year. Yield is estimated at 5.76 tons per hectare, the lowest projection since the damaging heat and dryness of the 2003/04 season. Severe drought and

extremely high temperatures prevailed in southern and central areas of the European continent during spring and summer, resulting in large significant soil-moisture deficits. Europe recorded one of its warmest springs in history, followed by record-setting heat during June and July. The dryness hampered corn planting, and the heat greatly accelerated plant development.

Analysts from the USDA Foreign Agricultural Service observed evidence of stress to corn in southeastern Europe during July crop travel. The excessive July heat resulted in poor or variable pollination, which will result in fewer kernels and lower yields.

Although the non-irrigated corn crop in southeastern European has been devastated by drought – with output in Bulgaria and Romania forecast to drop by as much as 50 percent – the two leading corn-producing countries in the EU largely escaped the heat and dryness. France, the leading corn producer, experienced favorable weather with frequent rainfall and moderate temperatures throughout the season. In Italy, the second-highest producer, corn is largely irrigated and less dependent on seasonal precipitation. *(For additional information, contact Bryan Purcell at 202-690-0138.)*

## **European Union Sunflowerseed: Drought in Southeastern EU Reduces Yield**

Estimated production of sunflowerseed, another important summer crop grown in the Balkans, was reduced by 1.0 million tons from last month to a record low 4.7 million. The 2007/08 EU-27 sunseed yield is estimated at 1.31 tons per hectare, the lowest in over 10 years, because of the extreme heat and severe dryness in southeast Europe. The sharpest yield reductions were in Romania and Bulgaria. *(For additional information, contact Bryan Purcell at 202-690-0138.)*

## **Russia Wheat: Favorable Conditions in Spring-Wheat Region Boosts Yield Prospects**

Russia wheat production for 2007/08 is estimated at 45.5 million tons, up 0.5 million from last month and up 0.6 million from last year. The increase is based on excellent weather in Russia's spring-wheat zone, including the Western Siberian, Ural, and Volga Districts. Precipitation has been above-average throughout the growing season to date, and the weather has been warm but without excessive temperatures. Spring wheat typically accounts for roughly 60 percent of Russia's total wheat area, but only 40 percent of total wheat output due to its inherently lower yield than winter wheat. Harvest typically begins in late August. The harvest of winter wheat, which is grown in European Russia, is essentially complete in the Southern District (the main winter-wheat region) and is in progress in the Central and Volga Districts. Reported yield is down from last year in the Southern District, due to persistent drought and excessive heat, but yields are up in the Central and Volga Districts. *(For more information, contact Mark Lindeman at 202-690-0143.)*

## **Canada Wheat: Estimated Production Down 15 Percent from Last Year**

The USDA forecasts Canada wheat production for 2007/08 at 21.50 million metric tons, down 1.0 million from last month and down nearly 3.8 million or 15 percent from last year's production. Harvested area is forecast at 8.62 million hectares, unchanged from last month's estimate but down nearly 11 percent from last year. Yield is estimated at 2.49 tons per hectare, down 5 percent from last month following hot, dry July weather across the southern portion of Canada's western provinces, especially Saskatchewan and Alberta. Despite the recent unfavorable weather, estimated yield remains slightly above average.

According to data from Statistics Canada, farmers reduced planted area for 2007/08 wheat and shifted to higher-priced commodities including canola. The U.S. agricultural attaché in Ottawa reports a 19-percent drop in the planted area of spring wheat and a 2-percent drop in winter wheat. Planting delays resulting from wet spring weather contributed to the lower planting intentions for spring wheat, as some farmers switched to shorter-season crops like barley and oats. *(For additional information, contact Arnella Trent at 202-720-0881.)*

## **Russia Corn: Persistent Drought Reduces Yield Forecast**

Russia corn production for 2007/08 is estimated at 3.5 million tons, down 1.0 million from last month and down 0.1 million from last year. Excessive heat and dryness in Krasnodar and Rostov, the country's top two corn-producing territories, has sharply reduced both estimated yield and the estimated harvested area. Planted corn area for 2007/08 increased by 0.4 million hectares from last year, to 1.48 million hectares, but severe drought will likely result in a significant portion of the planted area being cut for silage in August rather than harvested for grain in the fall. The USDA forecasts harvested area at 1.25 million hectares (against 1.0 million last year), and yield at 2.80 (3.60 last year) tons per hectare. *(For more information, contact Mark Lindeman at 202-690-0143.)*

## **Ukraine Barley: Estimated Barley Yield Lowest in Over 40 Years**

Persistent drought and excessive heat have driven estimated Ukraine barley yield to the lowest level since 1963. Production of barley for 2007/08 is estimated at 6.2 million tons, down 1.3 million from last month and down 5.2 million from last year's bumper crop. Yield is estimated at 1.41 tons per hectare against 1.60 tons last month and 2.18 tons last year. The spring barley crop, which typically accounts for about 90 percent of the country's barley output, has suffered from drought throughout the growing season. With harvest about 85 percent complete as of August 2, official harvest reports indicate yield down 40 percent from the same date last year. *(For more information, contact Mark Lindeman at 202-690-0143.)*

## **Russia Sunflowerseed: Sharp Drop in Planted Area**

Russia sunflowerseed production for 2007/08 is estimated at 5.7 million tons, against 6.7 million last month and 6.75 million last year. The reduction is based chiefly on data from Rosstat, Russia's official statistical agency, citing final planted area for 2007/08 at 5.3 million hectares (compared to 6.1 million last year). The USDA forecasts harvested area at 5.1 million hectares down from 5.9 million last year. Typically, between 4 and 10 percent of the planted area is not harvested, although the percentage of harvested area has been unusually high over the past 3 years due in large part to favorable harvest weather. Estimated yield was reduced by 3 percent this month, to 1.12 tons per hectare, due to persistent dryness and excessive July temperatures in the Southern District, the country's key sunflowerseed production region. A sharp increase in the use of hybrid planting seed in recent years has benefited the drought and disease resistance of Russia's sunflowerseed crops. *(For more information, contact Mark Lindeman at 202-690-0143.)*

## **Canada Barley: Average Yield Forecast Despite Heat Wave**

The USDA estimates Canada barley production for 2007/08 at 11.5 million metric tons, down 0.5 million from last month but up 1.9 million from last year. Harvested area is forecast at 3.9 million hectares, unchanged from last month but up 9 percent from last year. Yield is estimated slightly above average, at 2.93 tons per hectare, up 1 percent from last year's level. Estimated yield was reduced by 4 percent from last month due to dryness and high temperatures across the southern portion of the western provinces, especially Saskatchewan and Alberta, but is still near

the five-year average. The U.S. agricultural attaché in Ottawa reports that planting intentions increased 20 percent from 2006 due to strong demand from the feed sector. Livestock producers are switching from corn to barley, because of cost. In addition, some farmers shifted from wheat production to shorter-season crops, including canola, due to harvest delays following wet spring weather. *(For additional information, contact Arnella Trent at 202-720-0881.)*

### **Canada Rapeseed: Slight Yield Reduction on Record Area**

The USDA estimates Canada rapeseed production for 2007/08 at 9.0 million tons, down 5 percent from last month, but up 6 percent from last year. Estimated yield was reduced by 5 percent to 1.55 tons per hectare, slightly below average and 9 percent below last year. Hot and dry weather placed stress on flowering canola plants across the southern portions of Canada's western provinces during July, but the U.S. agricultural attaché in Ottawa indicates that rapeseed yields likely will be only marginally affected by the unfavorable weather.

Harvested area is forecast at 5.80 million hectares, up 16 percent from last year and slightly surpassing the record 1994/95 area of 5.76 million. According to the agricultural attaché, the sharp year-to-year increase in planted area was driven in part by favorable prices for rapeseed, which encouraged farmers to switch from wheat. *(For additional information, contact Arnella Trent at 202-720-0881.)*

### **Malaysia Palm Oil Output Drops in 2006/07**

Malaysia palm oil production for 2006/07 is estimated at 15.35 million tons, down 0.45 million from last month and down 0.13 million from last year due to lower than expected yields. Cumulative monthly production from October 2006 through June 2007 is estimated at 10.77 million tons, down 0.19 million from the same period last year. Although production is expected to increase each month from July through September, total output for 2006/07 is unlikely to reach last year's level of 15.48 million tons. *(For more information, contact Paulette Sandene at 202-690-0133.)*

### **Lower Yields Expected for China's 2007/08 Soybean Crop**

China's 2007/08 soybean crop is estimated at 15.2 million tons, down 0.4 million or 3 percent from last month and down 1.0 million or 6 percent from last year. The revision is based on lower forecast yields. The weather was unfavorably hot and dry for soybeans and other summer crops in Heilongjiang, eastern Inner Mongolia, and western Jilin during July and early August. Meanwhile, excessive rainfall in central China caused locally serious flooding in parts of Anhui, Jiangsu, Hubei, Sichuan, Chongqing and Henan provinces. The revised yield of 1.73 tons per hectare is lower than last year but close to the five-year average. Estimated soybean area for 2007/08 is unchanged this month at 8.8 million hectares, but down 0.5 million from 2006/07. Chinese farmers made a major shift in planted area from soybeans to corn this year in response to high corn prices and strong demand by the industrial sector. *(For more information, contact Paulette Sandene at 202-690-0133.)*

## **Brazil: Record Cotton Production Forecast for 2006/07**

The USDA estimates Brazil cotton production for 2006/07 at a record of 7.0 million bales, up 8 percent from last month and up 49 percent from last year. Harvested area is forecast at 1.09 million hectares, up 3 percent from last month and up 29 percent from last year. Yield is forecast at a record 1390 kilograms per hectare, up 7 percent from last month and up 15 percent from last year.

Mato Grosso is the highest producing state and accounts for 51 percent of the country's total cotton output. Bahia and Goias are the second and third highest at 30 and 7 percent of the crop, respectively. Harvesting has resumed in Mato Grosso, where rain during the end of July briefly interrupted field work. To date, approximately 60 percent of the crop has been harvested. In Goias, the harvest is estimated to be about half complete, and a reported 70 percent of the crop has been harvested in the southern states of Parana and Sao Paulo.

Cotton area for 2006/07 increased by approximately 50 percent in Mato Grosso and Mato Grosso do Sul due to low corn and soybean prices at the time of planting. In contrast, states in the South and Southeast saw large reductions in cotton area as producers switched from cotton to sugar cane. The U.S. agricultural attaché in Sao Paulo reported earlier this season that Brazilian farmers increased the use of fertilizer, pesticides, and other inputs on cotton and the second corn crop (*safrinha*), which will likely boost yields for both crops. In addition, the shift in cotton area from the less productive South to the more productive North (i.e., Mato Grosso) will likely contribute towards a record yield. (*For additional information, contact Curt Reynolds at 202-690-0134.*)

## **European Union: Record Rapeseed Production Forecast Despite Unfavorable Weather**

The USDA forecasts the 2007/08 European Union (EU-27) rapeseed crop at a record 17.2 million tons, down 1.1 million tons or 6 percent from last month, but up 8 percent or 1.2 million tons from last year's record production. Yield is forecast at 2.75 tons per hectare, down from last month's estimated 2.93 tons per hectares, and down from last year's 2.98 tons per hectare. The estimated yield is the lowest since the 2003/04 drought. Harvested area is forecast to increase for the fourth consecutive year to a record 6.2 million hectares. The traditional rapeseed-producing countries lie in northern Europe, and all have increased rapeseed area for 2007/08. The crop is primarily autumn-sown.

Excessive May precipitation throughout northern Europe reversed earlier dryness. The heavy rain resulted in localized flooding, harvest delays, and likely reductions in potential yield and crop quality. Estimated rapeseed output has been reduced from last month for several of the major producers, including Germany (down by 0.4 million tons to estimated production of 4.9 million), France (down by 0.2 million to 4.8 million), and the United Kingdom (down by 0.15 million to 1.9 million).

Rapeseed area continues to rise significantly every year in response to increased demand for biodiesel. Diesel is the primary transit fuel within the EU, and with an approaching EU energy mandate, high petroleum prices, and increased crushing capacity, more farmers are sowing

rapeseed to meet demand. Its growing popularity has extended into non-traditional rapeseed countries such as Bulgaria and Romania. Although comprising just a small overall total acreage, area is increasing two- and- three fold in these countries as they strive to increase participation in the EU biodiesel program. (*For additional information, contact Bryan Purcell at 202-690-0138.*)

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Branch, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-449), August 10, 2007.

World and Selected Countries and Regions

8/10/2007 10:23:07 AM

## TABLE 18

The table below presents a 26-year record of the differences between the August projection and the final estimate. Using world wheat production as an example, changes between the August projection and the final estimate have averaged 11.3 million tons (2.1 percent) and ranged from -32.1 to 19.5 million tons. The August projection has been below the final 15 times and above the final 11 times.

### RELIABILITY OF PRODUCTION PROJECTIONS

COMMODITY AND REGION	PROJECTION AND FINAL ESTIMATES, 1981/82 - 2005/06 1/					
	Difference		Lowest	Highest	Below	Above

1/ The final estimate for 1981/82-2004/05 is defined as the first December estimate following the marketing year.

2/ May not total 25 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
