

# Great Lakes Indices: A Concept for Discussion

Paul Bertram

US EPA

Great Lakes National Program Office

U.S. Army Corps of Engineers, Detroit District

# Concept of Great Lakes Indices

- Consolidate several indicators into an index
- Look at related indicators together
- Provide simplified assessment of environmental conditions
- Simple numeric scale
- Visual cue

# Great Lakes Indicator

## Example: Walleye in Lake Erie

- Contaminants in edible fish tissue
- Abundance or yield
- Preyfish
- Habitat Availability

**Contaminant Concentration  
in Edible Fish Tissue**

Contaminant Concentration  
in Edible Fish Tissue

Annual abundance/ yield

Contaminant Concentration  
in Edible Fish Tissue

Annual abundance/ yield

Prey Fish

Contaminant Concentration  
in Edible Fish Tissue

Annual abundance/ yield

Prey Fish

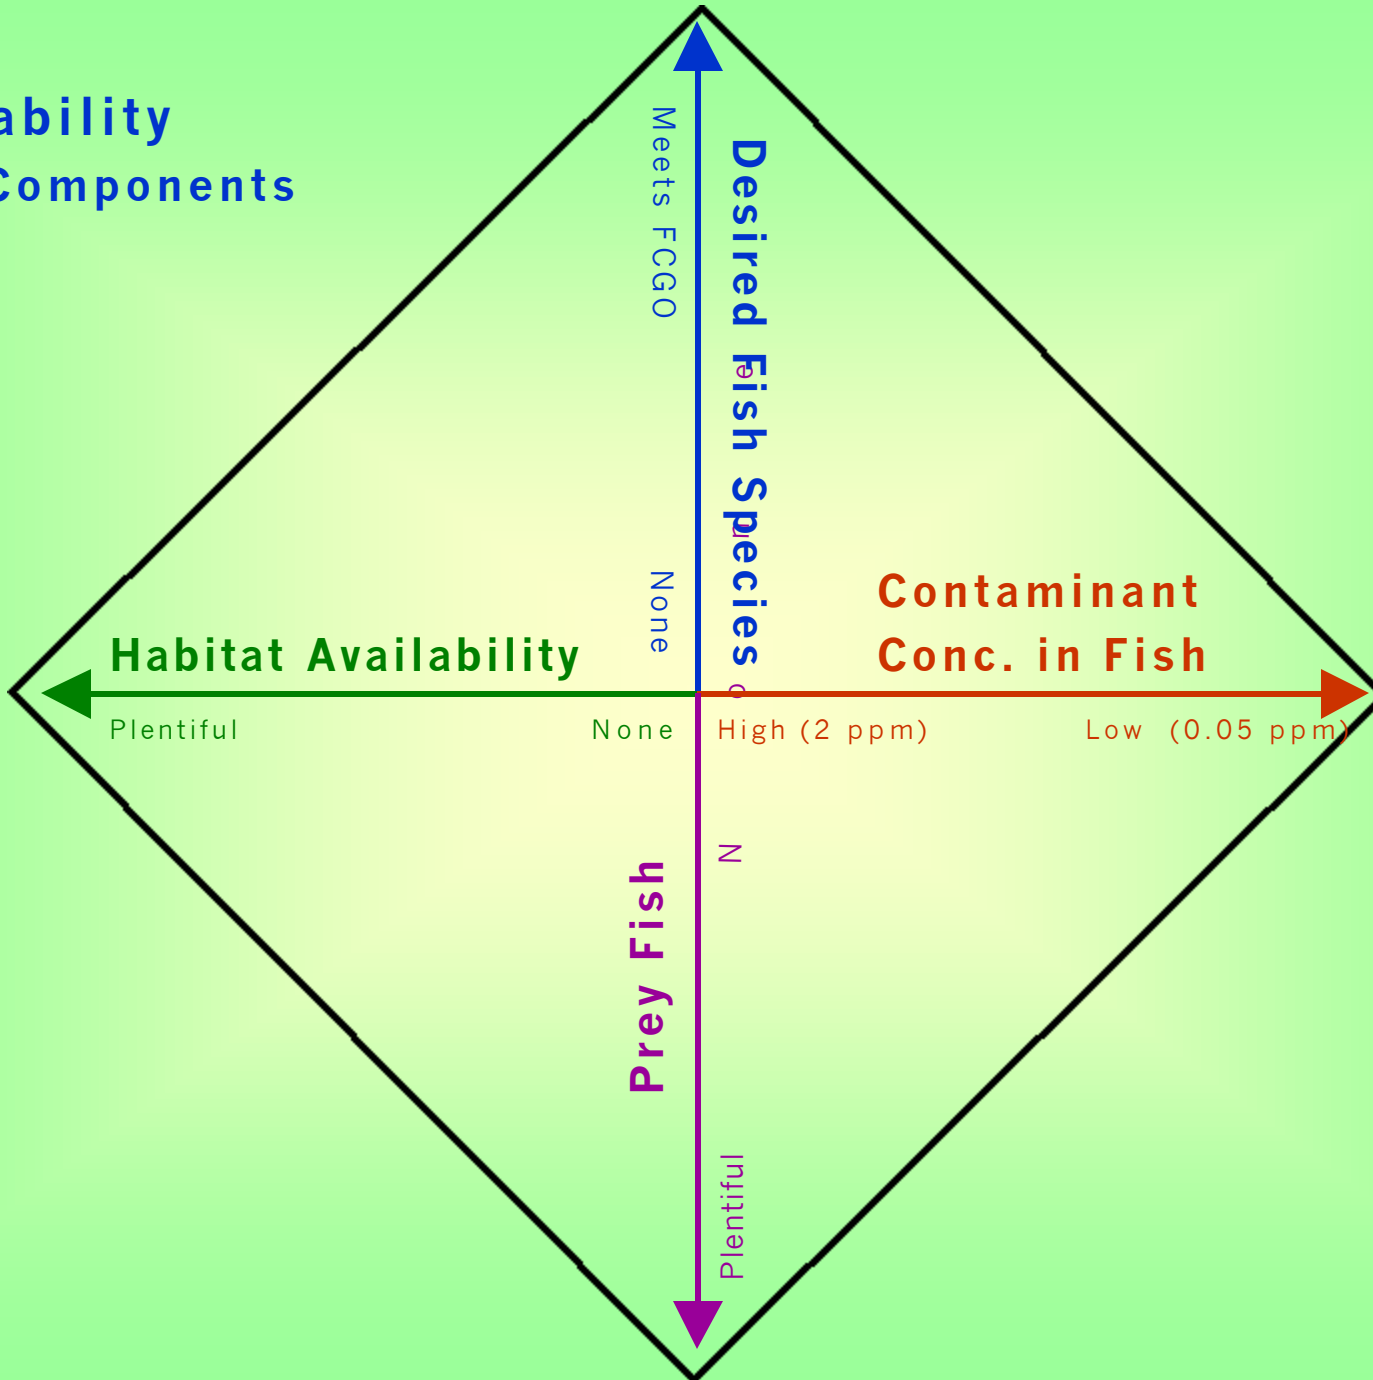

Habitat

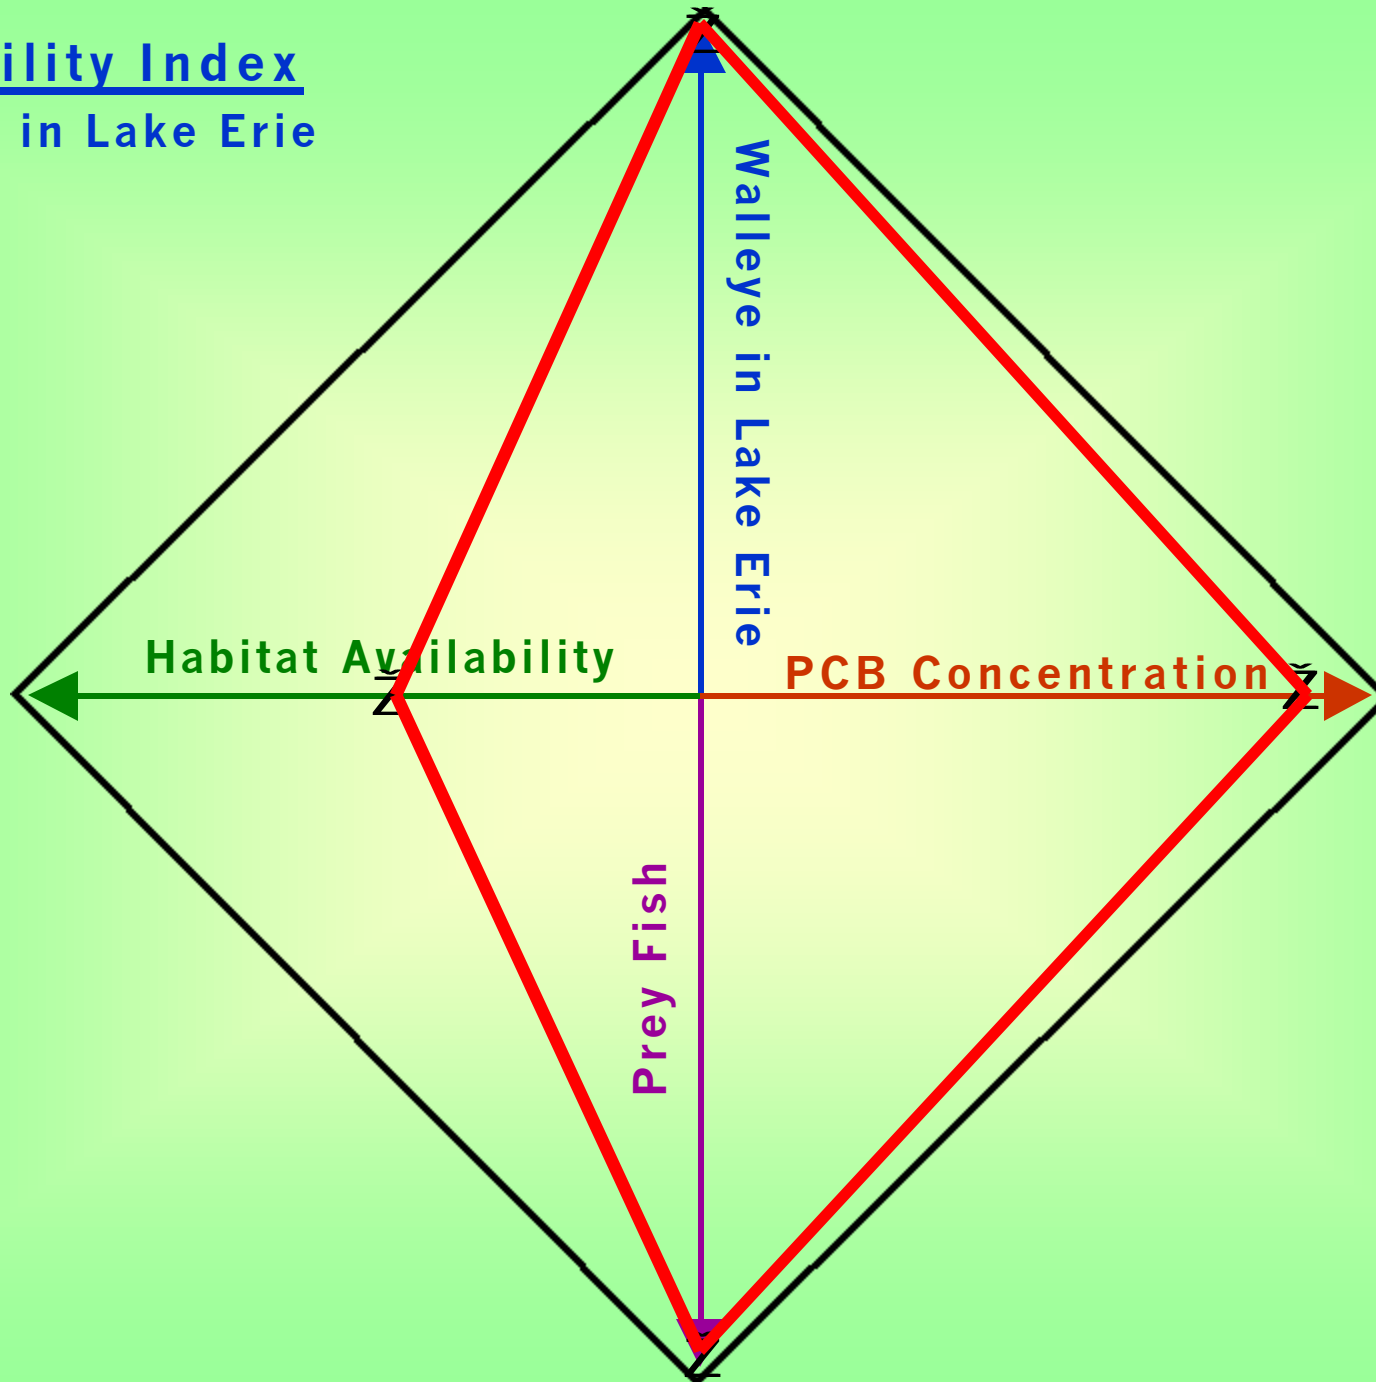

# Fishability Key Components

Fishability Index  
Walleye in Lake Erie

# Fishability Index

Average Scale

$$\text{Index} = \text{sum}/4*10$$

Example

Cont. conc. = 0.94

Prey Fish = 1.0

Habitat = 0.5

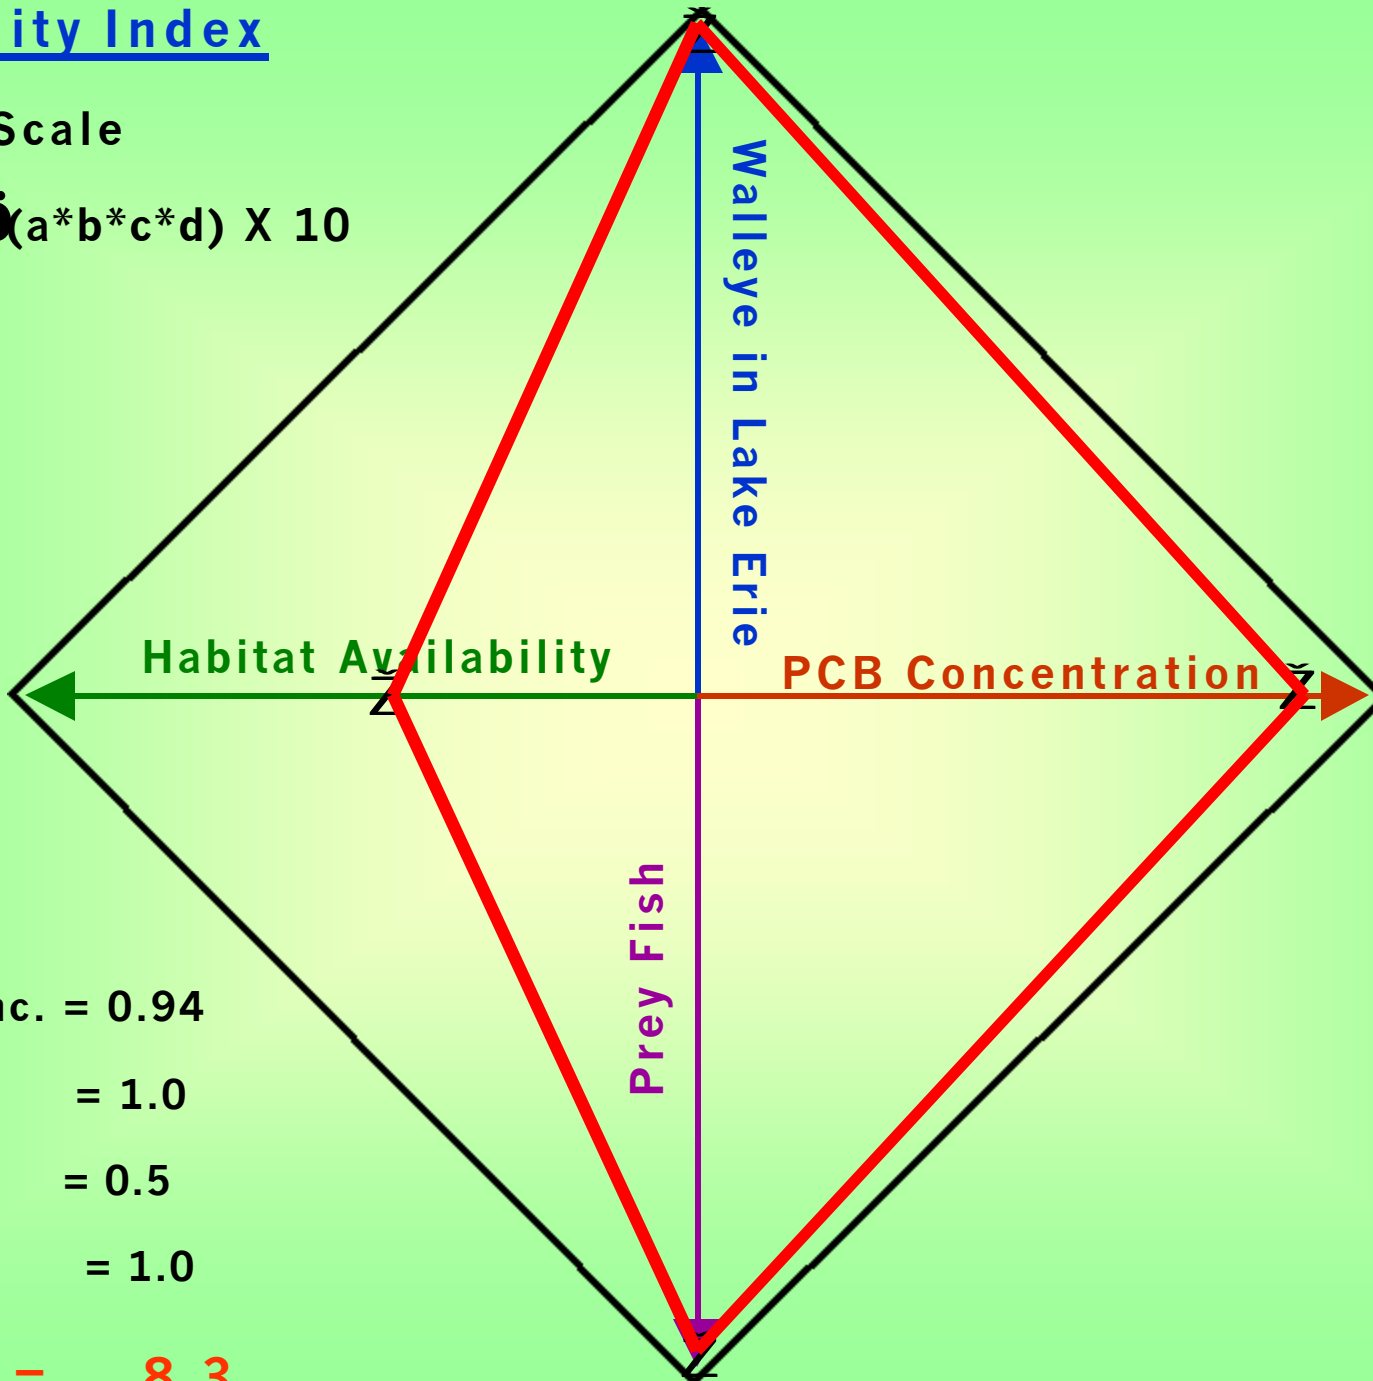

Fish Sp. = 1.0

$$\text{Index} = 3.44/4*10 = 8.6$$

# Fishability Index

Product Scale

$$\text{Index} = \sqrt[4]{(a*b*c*d)} \times 10$$

Example

Cont. conc. = 0.94

Prey Fish = 1.0

Habitat = 0.5

Fish Sp. = 1.0

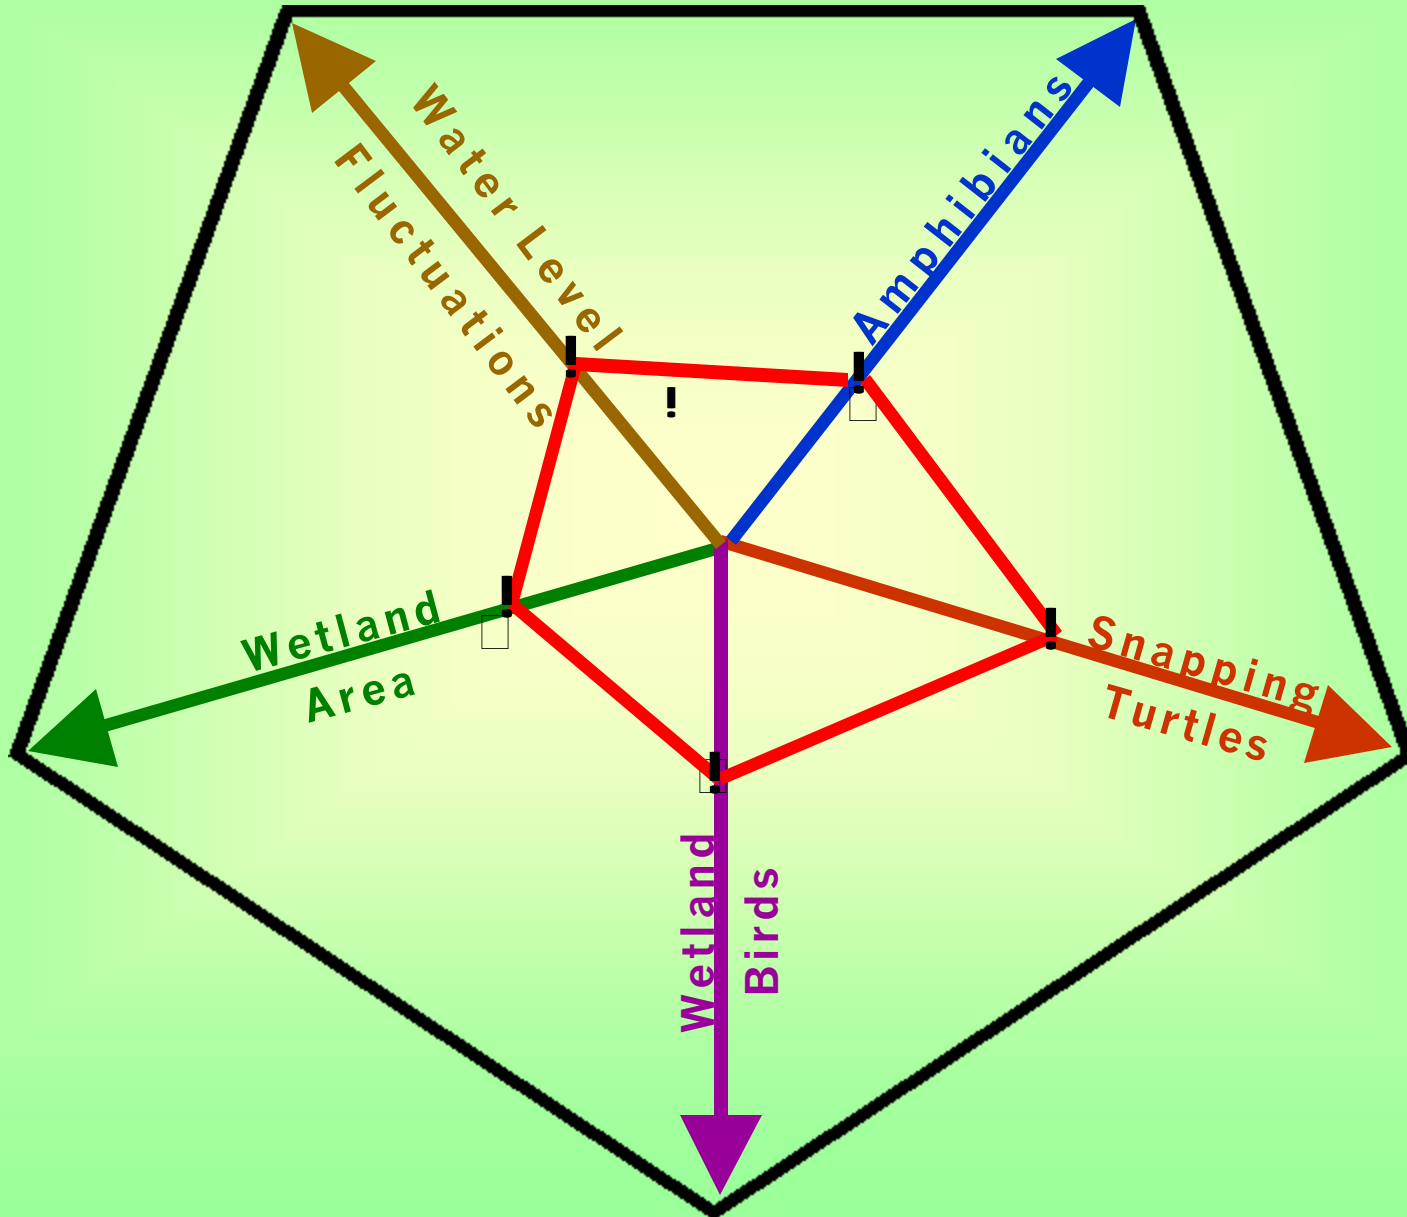

**Index = 8.3**

# Index Scale for Qualitative Ratings

# Wetlands

## Key Components

# Great Lakes Indices

## Questions for Discussion

- Is an index approach useful?
  - For managers?
  - For the public?
- What features should be in an index?
  - Numerical score?
  - Visual cue?
  - Others?
- What indicator groupings make sense?
