UNITED STATES DEPARTMENT OF AGRICULTURE

National Agricultural Statistics Service

Ron Bosecker, *Administrator*

Marshall Dantzler, *Deputy Administrator for Field Operations*

Compiled by

USDA/NASS, WISCONSIN FIELD OFFICE

Robert J. Battaglia, *Director*

Ron Tauchen, *Deputy Director*

Katie Howard, *Bulletin Coordinator*

Wendy Thompson, *Publication Producer*

Funding for this report came from the Division of Agricultural Resource Management (DARM) of the Wisconsin Department of Agriculture, Trade and Consumer Protection (WDATCP) and the National Agricultural Statistics Service (NASS). The content of the questionnaires and survey methodology were jointly planned by DARM and the Wisconsin Field Office of NASS. The Wisconsin Field Office conducted all other aspects of the survey to ensure the confidentiality of individual survey responses.

WDATCP administers many pesticide programs including special pesticide registrations, applicator certification, Clean Sweep, and other pesticide regulatory activities. This survey provides factual information about pesticide usage for selected crops in Wisconsin. Factual pesticide data is needed to make informed decisions and to develop useful rules and programs designed to manage agricultural chemical use on Wisconsin farms.

Many Wisconsin farmers provided data for this publication. Their help was absolutely essential to accurately estimate the use of agricultural pesticides. To those of you that participated in the surveys involved, thank you.

Robert J. Battaglia
Director

Survey Procedures

Information in this publication was collected on surveys conducted for the 2003, 2004, and 2005 crop years. The surveys sampled growers on the NASS list of Wisconsin farm operations that were classified for specific field, vegetable, or fruit crops. We have included some additional historic data for corn, soybeans, potatoes, and vegetables.

Data came from three distinct chemical and pest management practice surveys which had independent survey and sample designs: 1) Field crops - barley, corn, potatoes, oats, and soybeans. 2) Vegetables - fresh market cabbage, processing carrots, processing cucumbers, processing green peas, processing snap beans, fresh market sweet corn, and processing sweet corn. 3) Fruits - apples and tart cherries. Data collection, editing and summarization of the three types of surveys were handled separately.

The field crop survey was conducted in two phases. Data collection for the first phase began in June 2005 (June 2003 for barley). The first phase was a screening survey used to collect current acreage data for field crops. Every farm in the sample population had a chance of being selected in this first phase. Agricultural chemical applications and pest management practices were collected during the second phase that occurred from September to December 2005. Each producer from the first phase had a chance to be selected, but larger farms were more likely to be selected than smaller farms. A special questionnaire, developed to collect soybean data, was given to operations that were sampled for corn during the second phase.

The vegetable survey was conducted in a similar manner with two phases. The first phase, beginning in June 2004, was a screening survey designed to collect acreage data. Every farm classified with the target vegetables had a chance of being selected. The second phase survey was conducted from October through November 2004. Operations were selected for this second phase with a probability proportional to the number of acres of targeted vegetables reported on the first phase.

The fruit survey was a single phase survey. Every fruit farm with apples or tart cherries had a chance of being selected. Orchards were stratified by their number of apple and/or tart cherry acres, and a systematic sample was selected within each stratum. Field staff collected the data from October through December 2005.

For all three surveys, the number of operations sampled was designed to provide accurate estimates of chemical usage at the state level. Farm operators were personally interviewed to obtain information on chemical applications. The survey instruments that were used obtained chemical application data by product name or trade name. Office staff compared reported data with both manufacturers' label recommendations and data from other farm operators using the same product. Following this review, data was converted from the product level to the active ingredient level. The chemical usage estimates in this publication are the survey estimates of those active ingredients.

Percent coverage and total amount of an active ingredient applied were based on acres planted to the crop for field crops and vegetables, and bearing acres for fruit. A full crop year of applications was collected for each of the target crops. The estimates of acreage used in the summary were based on grower and processor surveys conducted throughout the crop year, and are official estimates of NASS.

Detailed data may not multiply across or add to totals due to independent rounding.

Pesticides In This Bulletin

Common name	Trade name(s) 1/	Surveyed crops which pesticide was applied to 2/	Total acres of surveyed crops receiving this pesticide
HERBICIDES			
2,4-D	2,4-D, Formula 40	Barley, Oats	21,500
Acetochlor	Harness, Surpass	Corn	608,000
Alachlor	Lasso, Bullet	Sweet Corn (P)	23,403
Atrazine	AAtrex, Bicep, Harness Extra	Corn, Sweet Corn (FM) & (P)	2,114,533
Bentazon	Basagran	Green Peas (P), Sweet Corn (FM) & (P)	13,323
Carfentrazone-ethyl	Aim, Avalanche	Sweet Corn (P)	12,912
Clopyralid	Accent Gold, Curtail	Corn	760,000
Dicamba, Sodium salt	Celebrity, Yukon	Corn	114,000
Diflufenzoxyr-sodium	Celebrity Plus, Distinct	Corn	114,000
Dimethenamid-P	Guardsman, Outlook	Sweet Corn (FM)	770
EPTC	Eptam	Snap Beans (P)	37,240
Ethalfluralin	Sonalan, Strategy	Cucumbers (P)	3,772
Fluazifop-P-butyl	Fusilade	Carrots (P)	2,604
Flufenacet	Epic	Corn	152,000
Flumetsulam	Accent Gold, Hornet	Corn	798,000
Glufosinate-ammonium	Liberty, Rely	Corn	342,000
Glyphosate	Credit, Roundup, Touchdown	Snap Beans (P), Sweet Corn (P)	11,917
Glyphosate iso. salt	Credit, Gly Star, Roundup	Corn, Potatoes, Soybeans, Apples, Tart Cherries	2,442,778
Halosulfuron	Permit, Sandea	Snap Beans (P)	15,200
Imazethapyr	Pursuit	Soybeans, Green Peas (P), Snap Beans (P)	201,486
Linuron	Linex, Lorox	Potatoes, Carrots (P)	21,200
MCPA	MCPA	Barley	3,850
MCPB	MCPB	Green Peas (P)	906
Mesotrione	Callisto, Lumax	Corn	950,000
Metribuzin	Axiom, Sencor	Potatoes	53,720
Nicosulfuron	Accent, Basis Gold	Sweet Corn (P)	12,912
Paraquat	Cyclone, Gramoxone	Apples, Tart Cherries	496
Pendimethalin	Prowl, Pursuit Plus	Corn, Potatoes, Soybeans, Peas (P), Snap Beans (P), Sweet Corn (FM) & (P)	373,577
Quizalofop-P-butyl	Assure	Snap Beans (P)	1,520
Rimsulfuron	Accent Gold, Basis, Steadfast	Corn, Potatoes	295,240
Sethoxydim	Poast	Potatoes, Snap Beans (P)	11,240
Simazine	Princep	Apples, Tart Cherries, Sweet Corn (P)	6,528
S-Metolachlor	Bicep,Cinch, Dual	Corn, Potatoes, Snap Beans (P), Sweet Corn (FM) & (P)	1,217,519
Trifluralin	Treflan, Trust	Cabbage (FM), Green Peas (P), Snap Beans (P)	36,956
INSECTICIDES			
Acephate	Orthene	Snap Beans (P)	7,600
Acetamiprid	Assail	Apples	348
Azinphos-methyl	Guthion	Apples, Tart Cherries	3,120
Bifenthrin	Brigade, Capture	Green Peas (P), Snap Beans (P), Sweet Corn (P)	35,752
Bt (Bacillus thur.)	Dipel	Cabbage (FM)	3/
Carbaryl	Sevin	Apples, Tart Cherries	1,790
Chlorpyrifos	Chlorpyrifos, Dursban	Soybeans, Apples	48,532
Cyfluthrin	Aztec, Baythroid	Corn, Potatoes, Sweet Corn (FM)	294,868
Diazinon	Diazinon, Spectracide	Apples	174
Dimethoate	Cymate, Dimate	Potatoes, Green Peas (P)	5,890
Endosulfan	Thiodan	Potatoes	4,760
Esfenvalerate	Asana, Curbit	Potatoes, Apples, Cabbage (FM)	37,750
Hexythiazox	Savey, Onager	Apples	232
Imidacloprid	Admire	Potatoes, Apples	38,254
Indoxacarb	Avaunt	Apples	1,218
Lambda-cyhalothrin	Karate, Warrior	Cabbage (FM), Snap Beans (P), Sweet Corn (FM) & (P)	36,637
Malathion	Agway Fruit Tree Spray	Apples	116
Oxamyl	Vydate L	Apples	58
Permethrin	Ambush, Pounce	Sweet Corn (FM)	924
Petroleum distillate	Damoil, Superior Oil	Apples	1,276
Petroleum oil	Damoil Dormant Oil Spray	Apples	232

Pesticides In This Bulletin (continued)

Common name	Trade name(s) 1/	Surveyed crops which pesticide was applied to 2/	Total acres of surveyed crops receiving this pesticide
INSECTICIDES			
Phosmet	Imidan	Potatoes, Apples, Tart Cherries	10,144
Pyridaben	Pyramite, Sanmite	Apples	348
Tebupirimphos	Aztec	Corn	266,000
Tefluthrin	Force	Corn	342,000
Thiamethoxam	Platinum, Ridomil	Potatoes	23,800
Zeta-cypermethrin	Fury, Mustang	Snap Beans (P), Sweet Corn (P)	36,190
FUNGICIDES			
Azoxystrobin	Abound, Quadris	Potatoes, Green Peas (P)	38,306
Benomyl	Benlate	Apples	116
Boscalid	Endura, Pristine	Potatoes, Tart Cherries	35,130
Captan	Agway Fruit Tree Spray	Apples, Tart Cherries	6,094
Chlorothalonil	Bravo, Echo, Ridomil	Potatoes, Tart Cherries, Carrots (P)	68,268
Copper hydroxide	Champ, Kocide	Potatoes, Apples	15,872
Copper oxychlo. sul.	C-O-C-S, Oxycop Dust #3	Apples	348
Copper sulfate	Basicop	Apples	232
Cymoxanil	Curzate, Tanos	Potatoes	27,880
Cyprodinil	Switch, Vangard	Apples	348
Famoxadone	Tanos	Potatoes	27,880
Fenarimol	Rubigan	Apples	696
Fenbuconazole	Enable, Indar	Tart Cherries	432
Iprodione	Rovral	Snap Beans (P)	3,040
Kresoxim-methyl	Sovran	Apples	928
Mancozeb	Dithane, Manzate, Penncozeb	Potatoes, Apples	52,192
Maneb	Dithane, Manex	Apples	174
Mefenoxam	Ridomil	Potatoes	31,280
Myclobutanil	Laredo, Nova, Rally	Apples	3,074
Propiconazole	Bumper, Tilt	Sweet Corn (P)	13,719
Pyraclostrobin	Headline, Pristine	Potatoes, Tart Cherries	14,050
Streptomycin	Agri-Mycin, Agri-Strep	Apples	1,102
Thiophanate-methyl	Topsin	Apples, Snap Beans (P)	30,916
Trifloxystrobin	Flint, Gem	Apples	2,494
Triphenyltin hydrox.	Agri Tin, Super Tin	Potatoes	23,800
OTHER CHEMICALS			
Butenoic Acid Hydro.	ReTain	Apples	464
Diquat dibromide	Diquat, Reglone	Potatoes	51,680
NAA	Fruitone-N, Stop Drop	Apples	870
Prohexadione calcium	Apogee	Apples	290

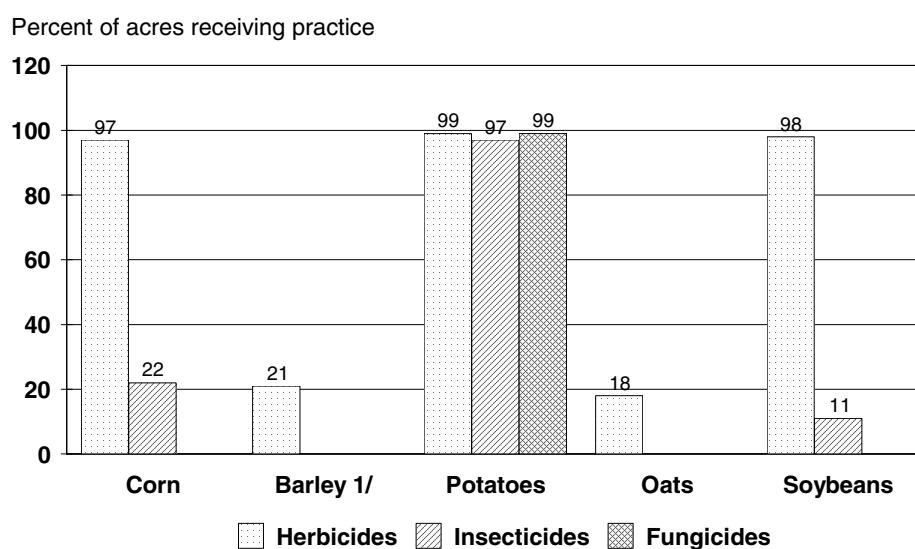

1/Only commonly used trade names are listed. 2/Only those crops for which the pesticide has significant use are listed. 3/Area applied is less than 0.5 percent. FM = fresh market, P = processing.

*Corn, Potato, Soybean, Apple, and Tart Cherry data is from 2005. Green Pea, Snap Bean, and Sweet Corn data is from 2004.

1/States surveyed are CO, GA, IL, IN, IA, KS, KY, MI, MN, MO, NE, NY, NC, ND, OH, PA, SD, TX, and WI. 2/States surveyed are CO, ID, ME, MI, MN, ND, WA, and WI. 3/States surveyed are AR, IL, IN, IA, KS, KY, LA, MI, MN, MS, MO, NE, NC, OH, SD, TN, and VA.

4/WI data was collected in a special questionnaire apart from the program states. The same summary method was used for all states.

5/States surveyed are MN, NY, OR, WA, and WI. 6/States surveyed are IL, MI, NY, OR, PA, and WI. 7/Total applied is less than 50 lbs. 8/States surveyed are CA, MI, NY, NC, OR, PA, WA, and WI. 9/States surveyed are MI, NY, and WI.

**Question not asked in this year.

Management Practices by Wisconsin Corn Growers, 2005

	Percent of farms reporting
Have you (the operator) ever purchased fertilizer over the internet?	0
Have you (the operator) ever purchased pesticides over the internet?	3
Was a soil test for nutrients performed on any field on this operation in any of the last four years (2002, 2003, 2004, or 2005)?	63
Do you update a nutrient management plan annually?	32

1/Based on 158 farms responding.

CORN: Historic Use of Pest Management Practices Wisconsin, 2001, 2002, 2003, 2005

Terms and Definitions

Active ingredient is the specific mechanism of action which kills or controls the target pests. Usage data are reported by pesticide product and are converted to an amount of active ingredient for the publication. A single method of conversion has been chosen for active ingredients having more than one way of being converted. For example, in this report, copper compounds are expressed in their metallic copper equivalent, and others such as 2,4-D and glyphosate are expressed in their acid equivalent. Glyphosate and glyphosate iso. salt represent the same active ingredient.

Agricultural chemicals refer to active ingredients in pesticide products.

Area applied represents the percentage of crop acres receiving one or more applications of a specific ingredient. This report does not contain acre treatments. However, acre treatments can be calculated by multiplying the acres planted by the percent of area applied and the average number of applications.

Beneficial organisms are collected and introduced into locations because of their value in biologic control as prey on harmful insects and parasites.

Crop year refers to the period immediately following harvest for the previous year through harvest of the current year. The 2005 crop year will overlap the 2004 and 2005 calendar years in some states.

Fertilizer refers to applications of the primary nutrients: nitrogen, phosphate, and potash.

Herbicides, insecticides, fungicides, and other chemicals make up the four classes of pesticides presented in this report. Miticides and nematicides are included as insecticides while soil fumigants, growth regulators, defoliants, and desiccants are included as other chemicals. This report excludes pesticides used for seed treatments and for postharvest applications to the commodity.

Mechanism of Action (MOA) is the method/biological pathway the pesticide uses to kill the pest.

Number of applications is the average number of times a treated acre receives a specific agricultural chemical.

Nutrient Management Plan is an organized strategy for determining the appropriate amount of nutrients to apply to various fields on a farm.

Pesticides include any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest, and any substance or mixture of substances intended for use as a plant regulator, defoliant, or desiccant. Pests targeted by pesticides include weeds, insects, fungi, and other forms of life.

Rate per application refers to the average number of pounds of a pesticide active ingredient applied to an acre of land in one application. The rate reflects the effect of the type of application such as band or spot treatments. Rate per crop year is the average number of pounds of an ingredient applied to one acre of land counting multiple applications.

Trade name is the trademark name given to a specific formulation of a pesticide product. A formulation contains a specific concentration of the active ingredient, carrier materials, and other ingredients such as emulsifiers and wetting agents. Common name is the officially recognized name for an active ingredient. This report shows active ingredient by common name.

Active Ingredient Used on Commodities, Wisconsin

Active ingredient	Field crops						Fruit		Vegetables
