

CRUISE REPORT

Cruise Number: FA-05-01
FOCI Number: FOCI 1FA05
Ship: NOAA Ship *Fairweather*

Area of Operations: East Kodiak, Alaska

Itinerary:

Departed Kodiak, Alaska, at 1000 hours on Tuesday, July 19, 2005.
Arrived Dutch Harbor, Alaska, at 0900 hours on Thursday, July 28, 2005.

Participating Organizations:

NOAA – Alaska Fisheries Science Center (AFSC)
7600 Sand Point Way N.E.
Seattle, Washington 98115-0070

Chief Scientist:

Janet Duffy-Anderson
NOAA/AFSC/FOCI
206-526-6465
Janet.Duffy-Anderson@noaa.gov

Other Participating Scientists:

| Name | Gender | Affiliation | E-mail Address |
|-------------------------|--------|-------------|--|
| Colleen E. Harpold | Female | AFSC | Colleen.Harpold@noaa.gov |
| Matthew T. Wilson | Male | AFSC | Matt.Wilson@noaa.gov |
| Miriam J. Doyle | Female | AFSC | Miriam.Doyle@noaa.gov |
| Jennifer Mitsuyo Nomura | Female | UW | jnmnomura@u.washington.edu |
| Sigrid A. Salo | Female | PMEL | Sigrid.A.Salo@noaa.gov |
| Dylan Righi | Male | PMEL | Dylan.Righi@noaa.gov |
| David G. Kachel | Male | PMEL | Dave.Kachel@noaa.gov |
| William Floering | Male | PMEL | William.Floering@noaa.gov |

Objectives of Cruise:

The cruise was a joint line-office effort (NOAA Fisheries/NOAA Research) to examine how nutrients, phytoplankton, zooplankton, and ichthyoplankton over the continental shelf are advected to nearshore juvenile fish nursery areas. Climate variability can affect this transfer of production by modifying the paths of the Alaska Coastal Current and the Alaska Stream, potentially affecting the fish that utilize the nearshore areas as nursery grounds in the late spring and summer. Biological sampling included Bongo and Tucker trawls to provide new information on the distribution of larval and juvenile fish and zooplankton. Oceanographic observations included deployment of satellite-tracked drifters to study eddy formation and current trajectories, and CTD samples to provide summer-collected information on phytoplankton biomass and distribution, and on nutrients that feed the continental shelf trophic web. Oceanographic and

biological observations from this research cruise will be integrated to provide a clearer picture of how the GOA ecosystem may respond to climate forcing during summer.

Summary of Operations:

| Gears Used | Tows |
|---|-------------|
| 60cm bongo (60Bon) | 47 |
| Seabird SeaCAT CTD (CAT) | 50 |
| CTD with bottle samples (CTDB) | 54 |
| 10" inner diameter modified Clarke-Bumpus (LG-CB) | 16 |
| Deployment of satellite buoy (SatBuoy) | 6 |
| 1m ² Tucker trawl (Tuck1) | 20 |

Summary of Cruise:

Grid survey:

Departure from Kodiak, AK occurred at 1000 hrs on July 19, 2005. At Stations 1-21, a Tucker tow (333 μm mesh) with a Seacat profiler mounted in-line with the trawl frame was conducted first, with the nets tripped between 10 off bottom to 40 m depth, and then from 40m depth to the surface. A 153 μm mesh, Clarke Bumpus net was strung inside the mouth of the drogue (Net 0) to collect small zooplankters on the downcast. Problems with the Tucker gear precluded sampling with the Tucker trawl after Station 21, so a 60 cm Bongo sampling array was used for Sations 22-81. Bongo tows were conducted without a Seacat profiler mounted on the towing wire for Stations 23-54. At these stations, net depth was estimated from scope tables using wire angle and wire out estimates (see FOCI Field Manual). The Seacat profiler belonging to NOAA Ship *Fairweather* was deployed after Bongo net tows at these stations to provide temperature and salinity profiles. At station 55, the Seacat profiler was remounted on the towing wire (in-line with the wire) and all subsequent bongo tows were made with the profiler on. CTD casts were conducted at stations 2, 6-12, 34-81, and nutrients and chlorophyll data were collected in addition to physical data. Methot trawls were not conducted due to problems with the electronics equipment.

Satellite-Tracked Drifters:

Satellite-tracked drifters (40m drogues) were deployed at Station 16 (drifter #57887), Station 20 (drifter #57889), Station 26 (drifter #57874), Station 31 (drifter # 57879), Station 36 (drifter #57872), and Station 42 (drifter # 57870). Drifters were deployed to study currents and eddies on the GOA shelf.

Sampling for Northern Rock Sole:

Additional net towing for ichthyoplankton (in particular, northern rock sole) occurred at selected stations. At stations 1- 5, 32-36, 39, 44, 55, and 56 additional oblique Tucker

tows, or bongo net 2, was sorted for ichthyoplankton. Larvae were removed and preserved in 95% EtOH.

Sampling in Barnabus Canyon:

A line of CTD casts were conducted in Barnabus Canyon for a special study project. Stations 60-65 were plotted along Barnabus Canyon from one end to the other and CTD casts were taken at each point. In addition to temperature and salinity profiles at each station, chlorophyll and nutrient samples were collected. Data will be used to characterize a front that occurs in the canyon in summer.

Time lost: 19 hrs due to delayed departure from Kodiak, AK
10 hrs due to inoperable weather conditions

Acknowledgments: The Eco-FOCI Program extends its thanks to the officers and crew of NOAA Ship *Fairweather*. All officers and crew performed their duties professionally, and the success of the cruise was dependent on their efforts. Special thanks to Mark Wexler, for assisting with coordination of field sampling operations, Richard Charter for his efforts troubleshooting communication difficulties with Seacat and CTD arrays, and to the Deck and Survey Departments for their hard work helping us collect the samples we needed. We appreciate the efforts of everyone to help us achieve our goals.
