

CRUISE REPORT

Cruise Number: MF-05-07
FOCI Number: FOCI 5MF05
Ship: Miller Freeman

Area of Operations: Southeast Bering Sea

Itinerary:

Departed Dutch Harbor, Alaska, at 1500 hours on Monday, May 9, 2005.
Arrived Dutch Harbor, Alaska, at 1200 hours on Friday, May 20, 2005.

Participating Organizations:

NOAA – Alaska Fisheries Science Center (AFSC)
7600 Sand Point Way N.E.
Seattle, Washington 98115-0070

Chief Scientist:

Janet Duffy-Anderson
NOAA/AFSC/FOCI
206-526-6465
Janet.Duffy-Anderson@noaa.gov

Other Participating Scientists:

William Rugen	Male	AFSC	Bill.Rugen@noaa.gov
Andre Buchheister	Male	AFSC	Andre.Buchheister@noaa.gov
Susan J. Picquelle	Female	AFSC	Susan.Picquelle@noaa.gov
Colleen E. Harpold	Female	AFSC	Colleen.Harpold@noaa.gov
Deborah M. Blood	Female	AFSC	Debbie.Blood@noaa.gov

Objectives of Cruise:

Eco-FOCI conducted an ichthyoplankton survey in the Bering Sea in the vicinity of Unimak Island, Alaska. Data on physical characteristics of the water column were also collected by Seacat profiler and CTD (at selected stations). Seven satellite tracked drifters were released in the Unimak Island vicinity to study depth-discrete current trajectories and to groundtruth an oceanographic model of water movements for use in studies of larval transport. MOCNESS tows and CUFES collections were conducted to ground-truth CUFES egg density data with egg densities derived from MOCNESS tows in the same locale

We also used the SIMRAD EK 500 Scientific Echosounder Monitoring system to collect ancillary data on adult fish aggregations during the entire cruise.

Summary of Operations:

Gear Used:	Tows
20cm Bongo (20BON)	91
60cm Bongo (60BON)	94
Seabird SeaCat CTD (CAT)	94
CTD without bottle samples	83
Egg Pump Sample Collector (CUFES)	44
Satellite Tracker Drifter (Drifter)	07
1m ² MOCNESS (MOC1)	22
Neuston (Neu)	74

Summary of Cruise:

Grid survey:

Departure from Dutch Harbor, AK occurred at 1500 hrs on May 09, 2005. At most stations, a neuston tow (505 μm mesh) was conducted first, followed by a bongo tow. At selected stations (approximately half), neuston samples were contaminated by an unknown white, greasy substance. For the bongo tow, the 60BON was fitted with 505 μm mesh on both sides. The sample from 60BON Net 2 was sorted for rough counts of Alaska plaice and walleye pollock larvae and then discarded. The 20BON array was fitted with 153 μm mesh on both sides. The Seacat profiler was attached in line during all bongo tows. CTD casts were conducted at selected stations, and in Unimak Pass. 3 transects of CTD casts were occupied (AO7 to AO10, AX4 to AX10, BA7 to BG7) to examine flow along the 100 and 200 m isobaths.

NEPROMS groundtruthing:

Seven satellite tracked drifters were deployed to groundtruth an oceanographic model (NEPROMS model) of current trajectories in the vicinity of Unimak Island. Drifters were released at:

Sta. AU7, drifter 53302 drogued at 40m, 53320 drogued at 16m

Sta. AU4, drifter 53303 drogued at 40m, 53316 drogued at 16m

Sta. AR7, drifters 53290, 53300 each drogued at 40m, 53316 drogued at 16m

CUFES groundtruthing:

We tested the ship's Continuous Underway Fish Egg Sampler (CUFES). Testing included comparison of sampling with the CUFES and ground-truthing CUFES egg density data with MOCNESS tows in the same locale. Twenty-one CUFES samples were collected when the CUFES equipment broke. Upon repair, it was noted that the system had been plumbed incorrectly. All CUFES samples up to that point (CUF001-CUF021) were marked as "Fail." The system was repaired, re-configured correctly and CUFES samples CUF022- CUF044 were collected. It will be necessary to continue to groundtruth the CUFES on a future cruise.

Alaska plaice distribution study:

Rough counts for larval Alaska plaice (*Pleuronectes quadrituberculatus*) were taken from 60BON Net #2. MOCNESS tows were conducted at selected stations on the basis of *P. quadrituberculatus* presence in the rough counts. Prior to each MOCNESS tow, CTD casts were conducted.

Time lost: 8 hrs due to emergency evacuation of crew member

19 hrs due to early arrival for sick crew member

Acknowledgments:

The FOCI program extends their thanks to the officers and crew of NOAA Ship *Miller Freeman*. All crew members performed their duties professionally and the success of the cruise was dependent on their efforts. Special thanks to Mark Miller, for suggesting an order of operation that helped expedite the sampling process, Kaye Kinoshita for her efforts troubleshooting communication difficulties with the MOCNESS system, Steve Bus for quickly machining a new part for the MOCNESS, to Steve and Ryan Sorenson for their work to makes the CUFES operational, and Ryan and Adam Shahan for their hard work helping us collect the samples we needed. We appreciate the efforts of everyone to help us achieve our goals.

Specifics of operations:
