

FINAL CRUISE REPORT

Cruise Number: MF05-12
FOCI Number: 7MF05

Ship:

NOAA Ship Miller Freeman

Area of Operations:

Gulf of Alaska

Itinerary:

Date depart / port: September 5, 2005 / Kodiak, AK
Date arrive / port: September 19, 2005 / Dutch Harbor, AK

Participating organizations:

University of Alaska Fairbanks (UAF)

Chief Scientist:

Matt Wilson M / AFSC
(206) 526-6522
Matt.Wilson@noaa.gov

Personnel:

Annette Dougherty	F / AFSC
Jennifer Lanksbury	F / AFSC
Libby Logerwell	F / AFSC
Melissa McKay	F / AFSC
Frank Morado	M / AFSC
Steve Porter	M / AFSC
Bill Rugen	M / AFSC

Cruise Objectives: The primary objective was to better understand geographic variation in the productivity of fishes in the western Gulf of Alaska (GOA). The cruise focused on the geographic distribution and size of age-0 walleye pollock and other small pelagic fishes in relation to zooplankton and physical oceanography. To accomplish this, a two-part grid of 67 stations was occupied. The first part was along the Gulf-side of Kodiak Island. The second part was in the south Semidi Islands vicinity. The Kodiak grid included nearshore areas previously shown to be pollock nurseries. Occupation of the Semidi grid extended a 3-year time series, which began September 2000.

Secondary cruise objectives were as follows:

- 1) Collect midwater fishes, plankton, acoustic, and CTD samples/data in Barnabas Gully to determine if previously observed spatial separation of capelin and juvenile walleye pollock can be ascribed to a difference in prey associated with a hydrographic front. Previously, the front has formed in the mid-shelf region of the gully.

- 2) Sample opportunistically to identify patches of strong acoustic back-scatter.
- 3) Sample opportunistically with a bottom trawl to collect piscivorous fishes for preliminary indication of predation on age-0 pollock.

Summary of Operations:

Operation	Tows
Anchovy trawl (Ancho)	85
Seabird SeaCAT CTD (CAT)	85
CTD without bottle samples (CTD)	1
CTD with bottle samples (CTDB)	11
10" inner diameter modified Clarke-Bumpus (LG-CB)	85
Deployment of satellite buoy (SatBuoy)	4
Shrimp Trawl (Shrimp)	1
1m ² Tucker trawl (Tuck1)	85

Samples Collected	Tows	Number
Adult pollock collected for gut analysis (A-Gut)	4	175
Adult pollock length measurements (A-Length)	6	18
SeaBird SeaCat CTD (CAT)	85	
Extracted chlorophyll (Chlor)	11	65
SeaBird CTD (CTD)	12	
Deployment of buoy or mooring (Deploy)	4	4
Stimulated fluorescence collected during CTD casts (Fluor)	12	
Frank Morado AFSC genetics and pathology samples. (FMGen)	13	514
Furuno attached to net (Furuno)	85	
Juvenile pollock collected for gut analysis (J-Gut)	51	1692
Juvenile pollock length measurements (J-Length)	51	4934
Juvenile pollock collected for otolith analysis (J-Oto)	51	1692
Nutrient samples collected from CTD casts (Nut)	11	73
Photosynthetically Active Radiation data collected during CTD casts (PAR)	12	
Quantitative tow preserved in formalin (QTowF)	224	245

Summary of Cruise:

Narrative: Progression over the sampling grid was as planned, from northeast to southwest (Figure 1, Table 1. All 67 grid stations were successfully occupied. Designation of the Tucker trawl nets was altered from that described in the Final Cruise Instructions: the drogue was designated net 1, the first messenger opened net 2, and the upper 40 m of water was sampled with net 3.

Several measurements were made continuously during the cruise. Acoustic data were collected along ca. 2300 nmi of trackline at 18, 38, 120, and 200 kHz using the Simrad ER60 (APC 10) echo-sounder. The acoustic-doppler current profiler was off only during acoustic noise experiments (see below), and temperature, salinity, and fluorescence were measured via the ship's uncontaminated seawater system. The shipboard computer system (SCS) was used to record time, position, and environmental information during the cruise, but all recorded sounder readings (EQ-50 depth, m) were not adjusted to account for the ca. 5 m transducer-mount depth.

Considerable effort was made to address secondary cruise objectives. Most daylight and some nighttime hours during 10-13 September were spent sampling in Barnabus sea valley (L. Logerwell, AFSC). This included CTD casts at 11 stations, and ca. 150 nmi of acoustic data along parallel tracklines spaced ca. 6 nmi apart. Water column nutrient and chlorophyll samples were collected during each CTD cast, and the light (PAR) and fluorescence sensors were mounted on the rosette. Most net sampling along the tracklines was conducted to identify echo-layers (9 Stauffer trawl tows) and collect potential fish prey (9 Tucker trawl tows). The underway nutrient analyzer system was not available so water samples were frequently collected from the flow-through system. Other secondary cruise objectives that were addressed include 7 opportunistic midwater tows to identify echo-sign, and the stomach contents of 152 fish were scanned for evidence of predation on age-0 pollock and capelin. In addition, approximately 3 hrs of acoustic data were collected to evaluate a noise removal method (A. deRobertis, AFSC), and fish and invertebrate samples were collected out of the Stauffer trawl and drogue net of the Tucker by F. Morado (AFSC) for his genetics and other pathological studies.

Some operations failed to collect quantitative samples or data and had to be redone. Failed operations were due to Tucker trawl nets that did not open, flowmeter readings that were spurious, or nets contacting the seafloor.

Days Lost to Weather:

None

Days Lost to Equipment Failure:

None

Recommendations:

- 1) Confirm that the depth reading from the SCS sensor labeled "EQ50-Corrected-M (Meters)" is an estimate of the distance between the sea surface and sea floor (i.e. water depth). If confirmed, omit the "EQ50-DEPTH-M (Meters)" from the list of available SCS sensors, and re-label the "EQ50-Corrected (Meters)" to "EQ50-DEPTH-M (Meters)".
- 2) Inability to transfer files and access SCS was frequent and severe. Make it possible to transfer files electronically among all onboard scientific computers including SCS, resident shipboard computers (i.e. Dataplot, Chief Scientist's) as well as any guest computers.
- 3) Set up science snap files to log date, time, and position information in Dataplot, the Trawlhouse, and possibly in the Chemlab. It would be best if the scientists were directly responsible for collecting this information.

Acknowledgments:

The scientific party would like to acknowledge the hard work and support of the officers and crew of NOAA Ship *Miller Freeman*. We are especially indebted to the Captain and Officers for efficient navigation that enabled us to occupy all stations including those tucked in bays and behind islands – a clean sweep. Mark Miller was definitely Mr. FOO – thanks for making the science-ship coms so easy. Survey helped plan for development of a “science snap” on future surveys. And, the Deck Crew knew when to patch ‘em, when to trash ‘em, and how to haul ‘em back at 10 m min⁻¹ (average retrieval rate for all oblique trawl tows = 9.987 m min⁻¹!). In short, to all, thanks for getting us where we needed to go, helping us do what we needed to do, and feeding us well.
