1. Purpose. To provide joint force, naval, and ground commanders with an interoperability tool for use in articulating their mission requirements.
2. Cancellation. OPNAVINST 3500.38A/USCG COMDTINST M3500.1A, MCO 3500.26.
3. Background. The Universal Naval Task List (UNTL) is a single source document that combines the Navy Tactical Task List (NTTL) and the Marine Corps Task List (MCTL). As applied to joint training and readiness reporting, this task list provides a common language that commanders can use to document their command warfighting requirements as mission essential tasks (METs). The UNTL's tactical level of war tasks are a compilation of Navy, Marine Corps, and Coast Guard tasks, written utilizing the common language and task hierarchy of the Universal Joint Task List (UJTL). The UNTL is architecturally linked to the UJTL, which includes strategic-national (SN), strategic-theater (ST), and operational (OP) levels of war tasks. This continuum is described in more detail in Chapters 1 and 2 of enclosure (1).
4. Scope. This instruction applies to Navy, Marine Corps, and Coast Guard (Department of Defense-related missions) activities, commands, and personnel conducting joint and naval operations, training, and readiness reporting.
5. Discussion. The UJTL and UNTL structures were developed as a standardized tool for describing requirements for planning, conducting, assessing, and evaluating joint and Service training. However, because the UJTL and UNTL provide a common language and reference system for addressing requirements, there are numerous Service and joint initiatives that can use these structures for additional purposes.
6. Policy. All Navy, Marine Corps, and Coast Guard (Department of Defense-related missions) activities, commands, and personnel conducting joint and naval operations and training shall:
 - a. Use the UNTL to facilitate linkages between Service and joint training as discussed in reference (b).
 - b. Use the detailed procedures for implementing Service and joint training policy that are contained in references (c) and (d).
 - c. Apply the concepts and methodology prescribed herein in planning, conducting, assessing, and evaluating joint training.
 - d. Use the UNTL to facilitate linkages between Service and joint readiness reporting as discussed in reference (e).
 - e. Use the guidance for implementing DRRS per references (f) and (g).

7. Responsibilities

a. The Chief of Naval Operations, Commandant of the Marine Corps, and Commandant of the Coast Guard shall provide policy sponsorship and Service approval of Service task lists.

b. In accordance with reference (b), the Chief of Naval Operations, Commandant of the Marine Corps, and Commandant of the Coast Guard shall support integration of the UNTL into existing joint/Service training and readiness reporting.

c. Navy Warfare Development Command (NWDC) shall:

(1) Serve as coordinator and primary review authority for the UNTL.

(2) Provide for a continuing review and update of the UNTL to respond to emerging change requests, and a periodic review at least every three years.

(3) Approve Navy changes to the UNTL, including task additions and deletions, after coordinating with fleet commanders, numbered fleet commanders, type commanders, and the Commandant of the Coast Guard (G-OPD), and informing the Marine Corps Combat Development Command (MCCDC). This coordination will normally be conducted by message.

(4) Submit the UNTL to the Chief of Naval Operations for approval when the number of approved changes, or the significance of the changes (e.g., addition of a task unrelated to current Navy missions or incorporation of a major procedural change), dictates that a new version be promulgated.

(5) Make changes to the MCTL, as approved by the Commandant of the Marine Corps or his designated agent.

(6) Maintain and make accessible the master copy of the UNTL.

(7) Upon review and coordination, forward Navy inputs to the UJTL to the Joint Staff via the Chief of Naval Operations.

d. MCCDC shall:

(1) Serve as the coordinator and primary review authority for the MCTL, found in Chapter 4 of this instruction. Director, Capability Development Directorate (CDD) is lead agent.

(2) Provide for the collection, review, and update of the MCTL in coordination with NWDC.

(3) Upon review and coordination, forward inputs and changes to the UNTL to NWDC.

JAN 30 2007

e. Commandant of the Coast Guard (G-OPD) shall provide for the collection, review, and update of the NTTL in coordination with NWDC.

f. Fleet, numbered fleet, and type commanders shall:

(1) Incorporate the UNTL into their planning, conduct, assessment, and evaluation of training.

(2) Participate in UNTL review process.

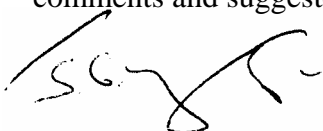

(3) Submit UNTL change requests, as occurring, to NWDC via the chain of command.

g. Unit commanders shall:

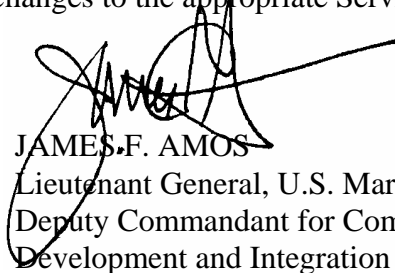

(1) Implement the methodology and concepts presented herein as appropriate to facilitate training and readiness reporting.

(2) Provide training and lessons learned reports dealing with the UNTL to NWDC via the appropriate Service office of primary responsibility.

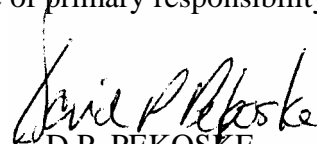

8. Review. Updates to the strategic, operational, and tactical tasks and the conditions and measures can be developed using the applicable guidance in this instruction. Forward all comments and suggested changes to the appropriate Service office of primary responsibility.

CHAPTER 1

INTRODUCTION

Introduction

1. Purpose. The Universal Naval Task List (UNTL) is designed as an interoperability tool for joint force and naval commanders to use as a master menu of tasks, conditions, and standards that provides a common language and structure for the development of naval mission essential task lists (METLs). The UNTL, along with the Army and Air Force task lists, directly supports the Universal Joint Task List (UJTL) [CJCSM 3500.04 (series)] and joint METL (JMETL) development. The defense transformation implementation strategy exploits and maximizes joint operations using a “capabilities-based,” network-centric force. The UJTL (which includes Service task lists) is the primary link to support joint training development, the Defense Readiness Reporting System (DRRS), and future resource/weapon system procurement.
2. Universal Naval Task List. The UNTL is a combination of the Navy Tactical Task List (NTTL), and the Marine Corps Task List (MCTL). The UNTL (NTTL + MCTL) contains a comprehensive hierarchical listing of the tasks that can be performed by a naval force, describes the variables in the environment that can affect the performance of a given task, and provides measures of performance that can be applied by a commander to set a standard of expected performance. The UNTL identifies “what” is to be performed in terms common to all Services. The UNTL does not address “how” a task is to be performed (found in joint or Service doctrine or tactics, technique, and procedures), or “who” is to perform the task (found in the commander’s concept of operations). The tasks listed in Chapters 3 and 4 are derived from Service and joint doctrine and tactics, techniques, and procedures (TTP). Doctrinal references have been cross-referenced within this manual to assist users in seeking applicable doctrine.
3. Mission Essential Task List (METL). A METL is developed in support of a commander’s assigned mission. Section 2 of this instruction, unique USN/USCG and USMC information in sections 3 and 4 respectively, and the Joint Training Manual (CJCSM 3500.03) describe the process by which a METL is developed. Through careful analysis of an assigned mission, the commander will arrive at a set of capability-based requirements. These requirements are then expressed in terms of the essential tasks to be performed, the conditions under which these tasks will be performed, and the standards to which these tasks must be performed. This instruction supports the process of developing a METL. See Table 1-1 below for a listing and short description of key terms. A more complete listing of terms is contained in Appendix B.
4. Tasks. Tasks describe in broad terms the requirements of the Armed Forces of the United States. They are actions or processes performed as part of an operation. When combined with the UJTL, this document provides an overall description of tasks that can be applied at multiple levels of war, i.e., strategic, operational, and tactical. A detailed description of each task is provided in the task definitions in Chapters 3 and 4. Tactical level tasks for the other Services may be found in their respective service task lists. A task cannot be classified as joint simply

based on its nature or on its placement at a particular level of war. The jointness of a task is based largely on how and by whom the task is performed and the context in which the operation or mission is conducted. In general, jointness connotes activities in which elements of more than one military Service participate under the auspices of a joint force commander.

5. Conditions. Conditions are variables of the environment that affect the performance of tasks in the context of the assigned mission. They are categorized by conditions of the physical environment (e.g., sea state, terrain, or weather), military environment (e.g., forces assigned, threat, command relationships), and civil environment (e.g., political, cultural, and economic factors). Some conditions are designed to help describe the theater of operations (e.g., host-nation support), others describe the immediate operational area (e.g., maritime superiority), while still others describe the battlefield conditions (e.g., littoral composition). When linked to tasks, conditions help frame the differences or similarities between assigned missions. The list of conditions can be found in Appendix A.

6. Measures and Criteria of Performance Comprise Standards. Commander's approved measures and criteria of performance comprise the task standard to describe how well a joint organization or force must perform a joint task under a specific set of conditions. The JFC uses criteria and measures to establish task standards based on mission requirements. These standards, when linked to conditions, provide a basis for planning, conducting, and evaluating military operations, readiness reporting, developing training events, and support the procurement of future weapon systems and resources. Measures and criteria will be further defined in Chapter 2.

7. Applicability to Other Processes. As mentioned above, $UNTTL = NTTL + MCTL$. The NTTL and MCTL provide all the naval tactical level tasks to the UJTL.

a. Unified combatant commanders and combat support agencies (CSAs) leverage the UJTL to assess and report readiness against their JMET/agency METs (AMET), giving them insight into a variety of other processes.

b. The UJTL and JMETL structure can be used to focus requirements for joint models and simulations.

c. Functional capability boards (FCBs) can map joint integrated activity sets future force development to UJTL tasks. These tasks can be used to define critical doctrine, organization, training, materiel, leadership and education, personnel, and facilities (DOTMLPF) changes required through the FCB and Joint Requirements Oversight Council (JROC) process.

d. Institutions providing joint professional military education (JPME) may cross-reference learning objectives to UJTL tasks to better align joint training and education systems.

e. The Joint Chiefs of Staff (JCS) joint information exchange requirements (JIER) and the Assistant Secretary of Defense command, control, communications, computers, intelligence, surveillance, and reconnaissance (C4ISR) architecture framework document require the JIER and

joint operational architecture be mapped back to the UJTL, which directly relates C4ISR requirements to the warfighters' training and operational environment. This is an integral component to Office of the Secretary of Defense (OSD)/JCS policy in the generation of joint operational architectures and C4ISR requirements.

f. The UJTL, in describing capabilities required to execute the National Military Strategy, is found in the Joint Strategy Review and the Joint Vision *Concept for Future Operations*. UJTL tasks will be mapped to joint capability areas. These capability areas will become the underpinning for capabilities-based planning. Future versions of the UJTL will provide capability templates with UJTL tasks mapped horizontally and vertically to approved capability areas. UJTL linkage to the capability development processes enhances the identification of joint requirements, capability shortfalls and deficiencies.

Table 1-1. Definition of Terms

Term	Definition
UJTL	Universal Joint Task List - the comprehensive list of tasks at the strategic and operational levels of war. The UJTL defines some tactical level tasks that are performed by more than one Service component and relies on individual service task lists to define tasks at the tactical level of war. The MCTL and NTTL link to the top level tactical tasks (TA) in the UJTL, e.g. TA 1 equals NTA 1 and MCT 1; TA 2 equals NTA 2 and MCT 2, etc.
UNTL	Universal Naval Task List (NTTL + MCTL)
NTTL	Navy Tactical Task List - the comprehensive list of Navy and Coast Guard (Department of Defense related missions) tasks, doctrinally based, designed to support current and future METL development.
MCTL	Marine Corps Task List – a comprehensive list of Marine Corps tasks, doctrinally based, designed to support current and future METL development.
Mission	The task, together with the purpose, that clearly indicates the action to be taken and the reason therefore.
Essential	Absolutely necessary; indispensable; critical to mission success.
Task	A discrete event or action, not specific to a single unit, weapon system, or individual that enables a mission or function to be accomplished.
Condition	A variable of the operational environment or situation in which a unit, system, or individual is expected to operate that may affect performance.

Standard	The minimum acceptable proficiency required in the performance of a particular task under a specified set of conditions, expressed as quantitative or qualitative measures. The commander establishes standards.
Mission Essential Task (MET)	A task selected by a force commander from the Universal Naval Task List (UNTL) deemed essential to mission accomplishment.
Mission Essential Task List (METL)	A list of tasks considered essential to the accomplishment of assigned or anticipated missions. A METL includes essential tasks, conditions, standards, and associated supporting and command-linked tasks.
Supporting Task	Tasks in the same chain of command that support the commander are “supporting tasks.” Senior METL tasks that a junior’s MET supports are supported tasks.
Command-Linked Tasks	Tasks performed by organizations/agencies outside the commander’s direct control are “command linked tasks.” (e.g. adjacent units, national intelligence, joint logistics activities, etc.)

CHAPTER 2

MISSION ESSENTIAL TASK LIST DEVELOPMENT

Mission Essential Task List (METL) Development

1. Introduction. This section explains how to use the Universal Naval Task List (UNTL) to develop individual mission essential tasks (METs) and assemble unit METLs. The basic guidelines for how tasks, conditions, and standards are applied to develop a MET will be discussed in detail.
2. Mission Essential Tasks (METs) and Mission Essential Task Lists (METLs). Under Defense Transformation initiatives, the Navy, Marine Corps, and Coast Guard, along with the other services and defense agencies have refined the way we train, equip, and conduct readiness reporting to support combatant commands (COCOMs) for joint operations. The unit METL is the foundation for which a unit will set training priorities and also report unit readiness under the new “METL-based” Defense Readiness Reporting System (DRRS). The COCOMs assemble joint mission essential tasks lists (JMETLs) to set priorities for joint exercises and report the state of readiness for joint forces assigned. This instruction is designed to aid Navy, Marine Corps, and Coast Guard commanders and their respective staffs in the development of Service METLs and to support COCOM JMETLs.
 - a. The METL development process provides a framework for the commander to quantify both the level and scope of effort needed to achieve mission essential task objectives, given a certain set of conditions. Once the level and scope of effort is quantified, the commander can then design a training program with training objectives that test each subordinate commander’s ability to support the overall effort. When training and resource shortfalls are identified, follow-on training can be scheduled and resource shortfalls can be addressed through other doctrine, organization, training, materiel, leadership and education, personnel, and facilities (DOTMLPF) solutions.
 - b. A MET is an activity (task) selected by a commander, deemed critical to mission accomplishment. Essential is defined as “absolutely necessary; indispensable; critical.”
 - c. The METL is the command’s list of METs (tasks, conditions, and standards), considered essential for accomplishment of the unit’s assigned missions. Navy, Marine Corps, and Coast Guard commanders will conduct mission analysis to determine the unit’s essential tasks. Using the UNTL, the unit METL can be assembled and linked to senior and subordinate command METLs and to the joint force commander (JFC) or COCOM JMETLs.
3. Organization and relationship to the Universal Joint Task List (UJTL). The UNTL is derived from the UJTL (CJCSM 3500.04 series). The UJTL serves as a common language and common reference system for joint force commanders, combat support agencies, operational planners, combat developers, and trainers to communicate mission requirements. It is the basic language for development of JMETLs or agency mission essential task lists (AMETL), which identify required capabilities for mission success. The UNTL includes all of the tasks of the Navy Tactical Task List (NTTL) and the Marine Corps Task List (MCTL). It, along with the UJTL, includes all those tasks naval forces might be required to perform, in peacetime and in war. The

UNTL will describe *what* the naval forces are to perform or accomplish in support of any requirement or assigned mission.

a. The structure of the UJTL and UNTL is by level of war: strategic, operational, and tactical. The strategic level of war is divided into the national and theater as indicated below. See Figure 2-1 (note that the gray boxes provide the objective of each level of war).

- SN: Strategic level - national military tasks
- ST: Strategic level - theater tasks
- OP: Operational level tasks
- TA: Tactical level tasks

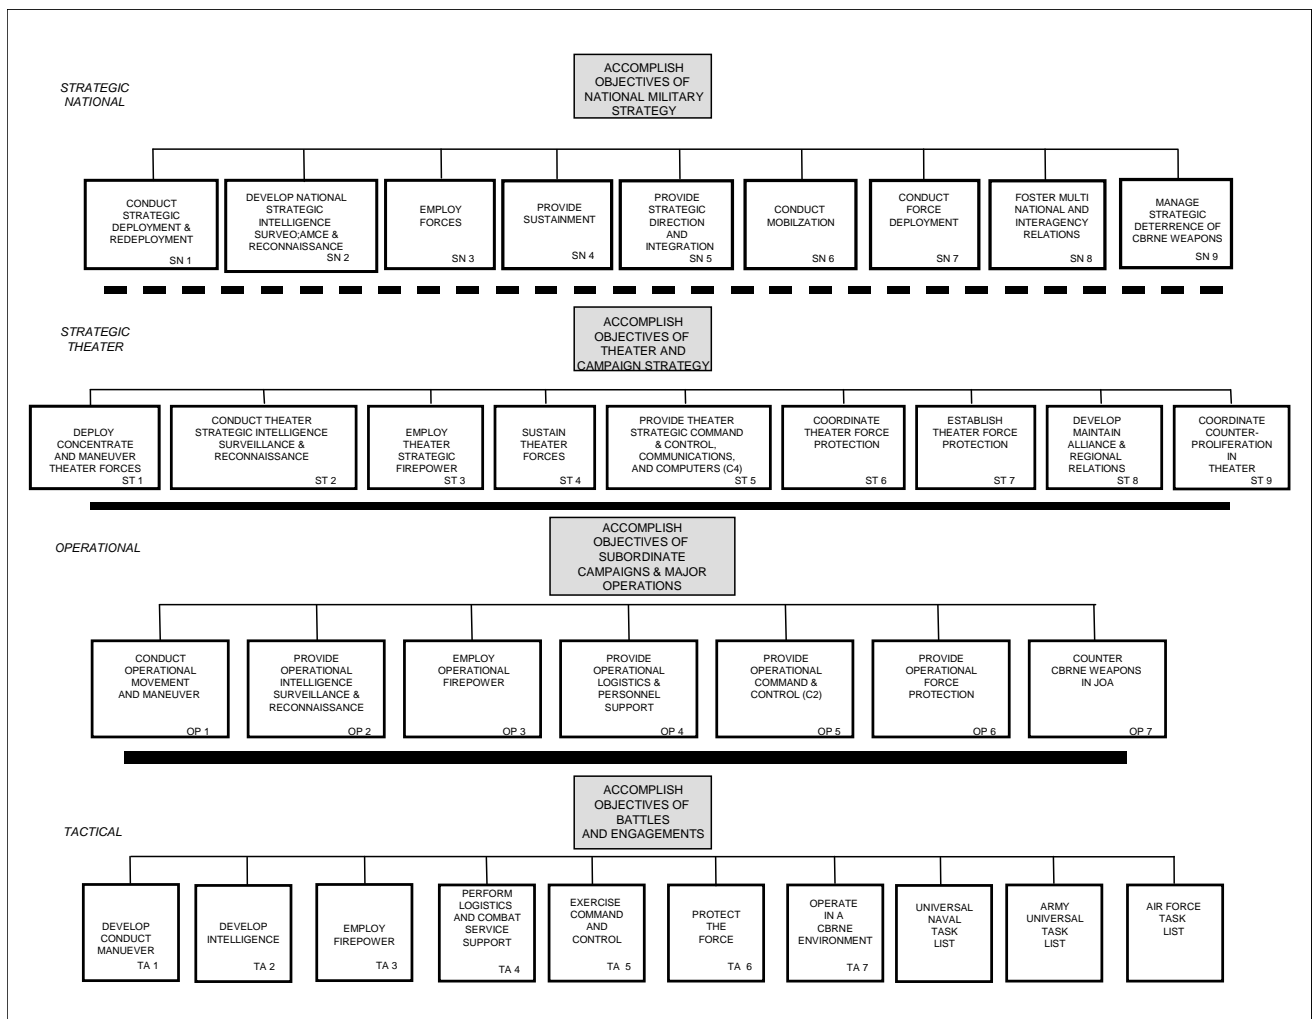

Figure 2-1. Relationship of Levels of War to Aims or Objectives

b. Each task in the UJTL/UNTL is individually indexed to reflect its placement in the structure. Each task is assigned a reference number that identifies it and helps to place it within the hierarchy. This provides a standard reference system for users to address and report

requirements, capabilities, or issues. Each task is given a prefix code referring to the levels of war. At the strategic level of war, the national military tasks have the prefix SN; the theater strategic tasks have the prefix ST, the operational level tasks have the prefix OP, and tactical tasks use TA. Navy Tactical Tasks are labeled - **NTA**, Marine Corps Tactical Tasks - **MCT**, Army Tactical Tasks - **ART**, and Air Force Tactical Tasks - **AFT**.

c. Each of the three levels of war is described by tasks organized around the major tasks that are performed at that level of war. For example, the operational level of war which most often is the focal point for the joint task force (JTF) commander, is organized around the following major tasks:

- OP 1. Conduct Operational Movement and Maneuver.
- OP 2. Provide Operational Intelligence, Surveillance, and Reconnaissance.
- OP 3. Employ Operational Firepower.
- OP 4. Provide Operational Logistics and Personnel Support.
- OP 5. Provide Operational Command and Control.
- OP 6. Provide Operational Force Protection.
- OP 7. Counter Chemical, Biological, Radiological, Nuclear, and High-yield Explosives (CBRNE) Weapons in JOA.

4. Levels of War. This section defines the strategic, operational, and tactical levels of war and discusses their relationship to the UNTL structure. The definitions of the levels of war are:

a. Strategic Level - the level of war at which a nation, often as a member of a group of nations, determines national or multinational (alliance or coalition) security objectives and guidance, and develops and uses national resources to accomplish these objectives. Activities at this level establish national and multinational objectives, sequence initiatives, define limits and assess risks for the use of military and other instruments of national power. For the military instrument, this includes developing global plans or theater war plans to achieve these objectives, and providing military forces and other capabilities in accordance with strategic plans. The strategic level of war is subdivided into strategic national and strategic theater.

b. Operational Level - the level of war at which campaigns and major operations are planned, conducted, and sustained to accomplish strategic objectives within theaters of operations. Activities at this level link tactics and strategy by establishing operational objectives needed to accomplish the strategic objectives, sequencing events to achieve the operational objectives, initiating actions, and applying resources to bring about and sustain these events. These activities imply a broader dimension of time or space than do tactics. They ensure the logistic and administrative support of tactical forces and provide the means by which tactical successes are exploited to achieve strategic objectives.

c. Tactical Level - the level of war at which battles and engagements are planned and executed to accomplish military objectives assigned to tactical units or task forces. Activities at this level focus on the ordered arrangement and maneuver of combat elements in relation to each other and to the enemy to achieve combat objectives.

5. Relationship of Levels of War to Theater Structure. While there is no direct link between levels of command and level of war, certain commands tend to operate at particular levels of war. Table 2-1 summarizes typical relationships of commands, and by implication their commanders, to the three levels of war.

a. Knowing the definitions of theaters, theaters of war, theaters of operation, and joint operations area is helpful in understanding the distinctions between the strategic and operational levels of war. Joint doctrine (JP 1-02) defines a theater as the “geographic area outside the continental United States for which a commander of a combatant command has been assigned responsibility.” It further defines a theater of war as “that area of land, sea, and air that is, or may become, directly involved in the operations of war.” Joint doctrine defines a theater of operations as “that portion of a theater of war necessary for military operations and for the administration of such operations.” Thus, a theater of war may contain more than one theater of operations. A joint operations area (JP 3-0) is defined as “an area of land, sea, and airspace, defined by a COCOM or subordinate unified commander, in which a JFC (normally a JTF commander) conducts military operations to accomplish a specific mission.”

b. The combatant commander normally operates at the strategic level of war, applying the military element of power in coordination with the other elements of national power to achieve the desired military end state within the strategic end state determined by national security or strategic military objectives and guidance. A theater of operations commander (e.g., unified commander or JTF commander) typically operates at the operational level of war, applying military power in the designated theater of operations, toward the strategic military objectives assigned by the geographic combatant commander or national command authorities.

Ship, Squadron or Battalion Commanding Officer			X

Table 2-1. Notional Relationships of Commands to Levels of War

6. Identifying the Level of War of a Task. Many tasks in the UNTL structure have parallel tasks at other levels of war. For example (using a NTA from Chapter 3), NTA 2.2 *Perform Collection Operations and Management*, has parallel tasks at other levels of war: OP 2.2, *Collect and Share Operational Information*, ST 2.2, *Collect Theater Strategic Information*; and SN 2.2, *Collect Strategic Information*. In examining an intelligence task that is being conducted as part of a joint

military operation, it may be difficult to determine at which level of war that task is being performed. To make such a distinction, one must examine the aim or objective of the intelligence collection effort, the theater structure of the military operation being conducted, which organizations or components are actually performing the task, and the level of command at which the intelligence collection activity is being directed.

7. Naval Tasks. Naval tasks support all levels of war, strategic, operational, and tactical, however the majority of naval missions and tasks are centered on the Operational and Tactical levels. METs designed to specifically support a COCOM mission (or JMETL) will most likely be at the operational (OP) and tactical (NTA/MCT) levels. Naval tasks within the UNTL were developed using many different sources (review of Title 10 US Code, the Joint Strategic Capabilities Plan, COCOM and component operation plans (OPLANs), war plans, operations orders (OPORDS), required operational capabilities (ROC)/projected operational environment (POE), doctrine publications, etc.), which produced a significant number of operational and tactical level tasks. Mission analysis and METL development conducted by component commanders and operational force commanders also led to the identification and development of new tasks. The development of naval tasks was conducted in accordance with the following guidelines.

- Tasks describe an activity visible outside the command
- Tasks describe a discrete event
- Tasks do not define who
- Tasks do not define how
- Tasks do not discuss a specific piece of equipment (i.e., gun, bomb, boiler, etc.)
- Tasks do not describe environmental issues (physical, military, or civil conditions)
- Tasks do not duplicate an existing task

a. Tasks are based on doctrine and tactics, techniques, and procedures (TTP). Normally a task is an activity identified by doctrine or TTP as performed by a joint force or military Service. Doctrine or TTP should provide enough description of the activity to contribute to the development of a definition. However, in some cases a capability may exist to perform a task before specific doctrine is written to describe it.

b. Tasks within the UNTL do not specify means (i.e., type of unit, organization, or system) involved in task performance.

c. Joint and Service tasks are not organized to describe a sequence or a process. The location of a task within the hierarchy does not imply precedence or organization, nor does it imply the way tasks are selected or applied.

d. Tasks within the UNTL do not include conditions. The tasks focus on the activities performed. The environment in which the task is performed is key to the successful accomplishment of the mission and, therefore, the tasks must be *linked* to applicable conditions

of the environment. The conditions under which a task would have to be conducted are provided in Appendix A. These conditions will be linked to the task, but will not be incorporated within the task itself. Keeping conditions out of the task ensures the tasks will be applicable to a wider variety of operations and regions where operations may be conducted. For example (using a MCT from Chapter 4), MCT 1.6.6.6, *Conduct Noncombatant Evacuation Operations (NEO)* with conditions written into to task, (*Conduct NEO in "high terrain elevations"*) will limit the use of MCT 1.6.6.6 to only mountainous areas.

e. Tasks are placed at appropriate levels of war. For example, intertheater deployment of forces occurs primarily at the strategic level of war and, therefore, would not be included at the operational or tactical levels. On the other hand, the task of occupying a combat area may be considered primarily tactical. Some tasks may be performed at more than one level of war. The level of war of an activity is partially determined by the nature of the activity itself (employing nuclear weapons is considered to be strategic in almost all instances) and partly by the context in which it occurs (the purpose and intent in performing a task).

f. Some tasks performed at the tactical level of war may, in some situations, be performed jointly. "Jointness" is not a criterion for including or excluding a task from a Service task list (at the tactical level of war). The main criterion for including a task in a Service task list is whether Service forces are capable of performing the task at that level of war (with or without the involvement of forces from another military Service).

8. Task Linkages. Tasks in the UNTL can be linked to other tasks within and across the levels of war. Two types of linkages exist among tasks in the UNTL: vertical and horizontal. Vertical linkages connect tasks at one level of war to related tasks at other levels of war. Horizontal linkages also referred to as end-to-end linkages, connect different tasks at the same level of war. The basis for linking these tasks is that in the context of conducting a military operation, tasks that are linked must all be performed to standard and in concert with one another in order for a military operation to succeed. Horizontal linkages involve the synchronization of a variety of tasks in time and space based on a commander's concept of operations for a mission and in accordance with joint doctrine.

a. Vertical Linkages – Vertical linkages link echelons of command, providing the connecting structure among tasks at the strategic, operational, and tactical levels of war. Intelligence is an example of a task with vertical linkages at all three levels of war. Although the generic elements of strategic, operational, and tactical intelligence are similar (i.e., collection, processing, integration, analysis, evaluation, interpretation, and dissemination), the tasks and subtasks associated with each level are distinct in terms of goals, scope, and what type of organization is assigned to perform them. At the strategic level, national means are used to collect, analyze, assess, prepare, and disseminate intelligence to many users, ranging from theater commanders to tactical units. Conversely, tactical commanders pass information and intelligence collected at the tactical level of war through the same chain to the national level where they are collated, analyzed, and assessed to form a worldwide intelligence picture. These vertical relationships,

which form an “intelligence system,” are maintained to some degree regardless of the type of military operation being planned or conducted.

(1) An example of vertical linkages in the UNTL is illustrated in Figure 2-2 with maneuver tasks. Before bringing force to bear on an enemy, forces might have to conduct a theater strategic movement and maneuver (ST 1, *Deploy, Concentrate, and Maneuver Theater Forces*) based on a request from a JFC. Once in the theater of operations, or joint operational area, it may be necessary to further conduct intratheater of operations deployment of these forces (OP 1.1.2, *Conduct Intratheater Deployment and Redeployment of Forces within the Joint Operations Area (JOA)*) to move them into positions that will give them a relative advantage over the enemy forces and support the JFC’s maneuver concept for his subordinate campaign plan. This operational level of war movement and maneuver could also put the tactical forces into position from which they can deploy and conduct tactical maneuver (NTA 1, *Deploy/Conduct Maneuver*) and employ direct and indirect fires. At the tactical level of war, maneuver deals with achieving positional advantage over an enemy force in conjunction with fire support.

(2) One can also view the example shown in Figure 2-2 from a bottom-up perspective. In this case, the results of a tactical level maneuver (NTA 1, *Deploy/Conduct Maneuver*) could achieve an advantageous position over the enemy. At the tactical level, a penetration, or flanking maneuver might achieve tactical success and permit maneuver to operational depths (exploitation and pursuit), helping to achieve operational and theater strategic objectives (OP 1, *Conduct Operational Movement and Maneuver*).

Figure 2-2. Vertical Linkages

(3) The vertical linking of the tasks across levels of the UNTL can be used to make connections between related capabilities at the tactical, operational, and strategic levels of war

and illustrate how an inadequate capability at any level of war can impact the ability of a joint force to integrate that capability across the three levels of war. Such linkages exist in all general task areas of the UNTL, to include movement and maneuver, intelligence, firepower, sustainment, command and control, and protection.

b. Horizontal Linkages - Links connecting tasks at the same level of war describe the operations concept. A horizontal, or end-to-end, linkage is defined in the context of a military operation. That is, when conducting a military operation, different tasks (e.g., intelligence, fires) interact with one another to achieve the effects desired by the commander.

9. Operations Templates. An operations template provides a graphical depiction of the activities performed as part of a military operation. It depicts activities and interactions among them. The activities represented in an operations template can include tasks performed by the commander and staff, tasks performed by adjacent commands (e.g., command-linked tasks), and tasks performed by subordinate commands or organizations (e.g., supporting tasks). Three basic types of task characteristics and interactions among tasks may be depicted in operations templates. They are temporal, informational, and spatial. A different view can be constructed to depict each of these types of characteristics and interactions.

a. Temporal View. Temporal characteristics of tasks refer to whether a task occurs once, more than once (e.g., cyclically), or continuously. Temporal interactions among tasks refer to the sequencing of tasks. That is, one task must be completed before another one can begin (prerequisite or successor), one task might begin at the same time as another one (concurrent beginning), or one task might have to be completed at the same time as another (concurrent ending). For example, suppose a Joint Force Air Component Commander (JFACC) has tasked units of one or more components to perform an air interdiction operation. Tasks comprising the operation can be identified from the UNTL and temporal interactions (i.e., sequencing) among the tasks can be depicted, as shown in Figure 2-3. Operations templates can be developed to varying levels of detail. The example shown below simply illustrates the kinds of information that can be included in an operations template temporal view and how that information can be displayed. Additional data describing the temporal characteristics of each task included in a template (e.g., identifying who performs the task) can be linked to each task.

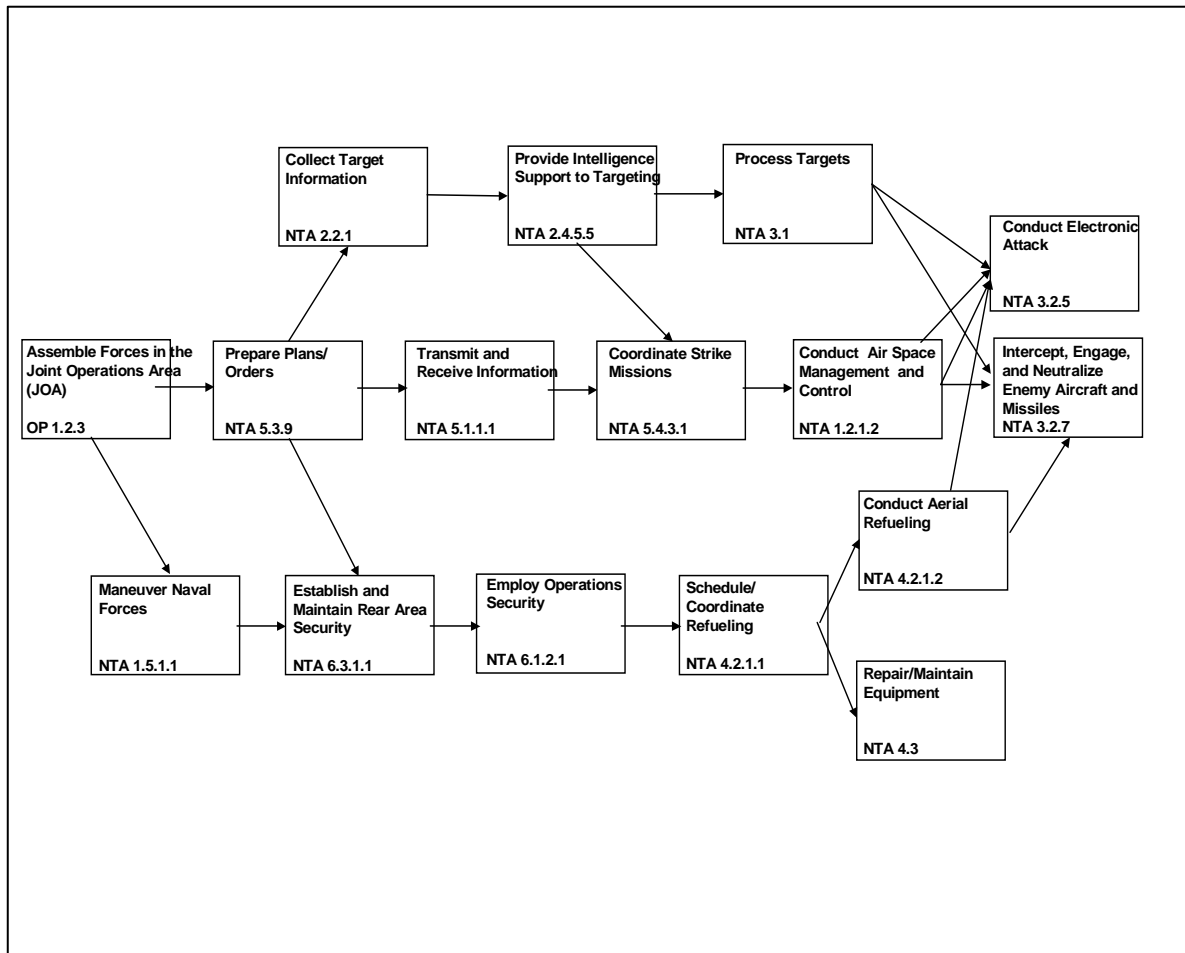

Figure 2-3. A Temporal View Operations Template for an Air Interdiction Operation

b. Informational View. Information characteristics of tasks refer to the need for information in order to perform tasks (e.g., task of selecting targets to attack requires intelligence data), the transformation of one type of information into other types during the performance of a task (e.g., task of selecting targets to attack transforms raw intelligence and targeting data into a target list), and the output of information after a task is performed (e.g., task of selecting targets to attack yields target lists, such as found in a master air attack plan). Informational interactions among tasks concern the input and output relationships among various tasks involved in a military operation (task to integrate/synchronize operation firepower receives inputs from the task of selecting operational targets to attack). Some tasks provide informational inputs to other tasks, or require inputs from other tasks. Consider again the example of a JFACC who has tasked units of one or more components to perform an air interdiction operation. Tasks comprising the operation can be identified from the UNTL and informational interactions among the tasks can be depicted, as shown in Figure 2-4 below. This example illustrates the kinds of information links that can be depicted in an operations template view. Additional data describing the informational characteristics of each task included in an informational template (e.g., identifying systems that generate or communicate informational products) can be linked to each task.

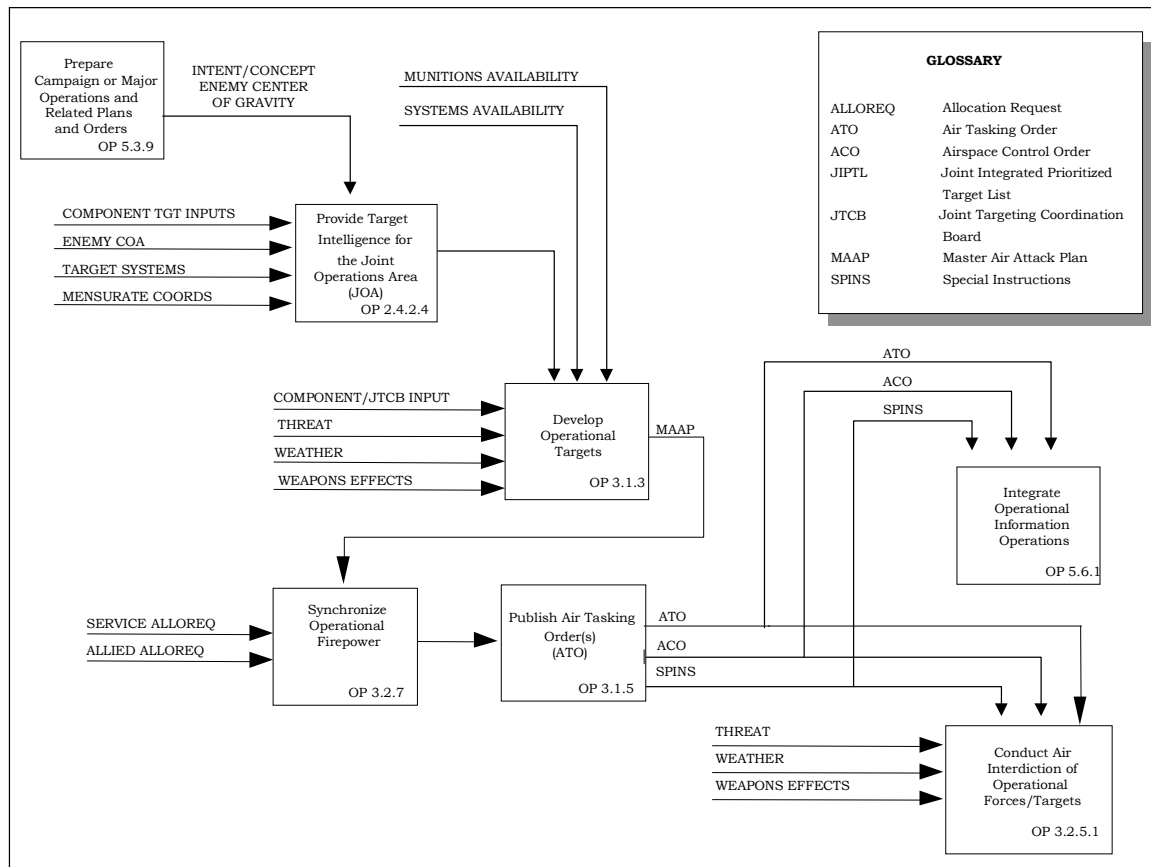

Figure 2-4. Informational View Operations Template for an Air Interdiction Operation

c. **Spatial View.** Spatial characteristics of tasks refer to the location of task performance (geographic coordinates). For example, tasks may begin and/or be completed at a specific location (e.g., complete a resupply task at a location where a fires task is taking place; begin a medical evacuation task where friendly forces are engaged and end it where medical care can be provided) or perform a task at multiple locations (e.g., deploy various ships in a fleet to different locations). Spatial interactions among tasks could include the requirement to perform a task in a location relative to where another task is being performed (e.g., conduct close air support task near a maneuvering friendly force). Consider once again the example of a JFACC who has tasked units of one or more components to perform an air interdiction operation. Tasks comprising the operation can be identified from the UJTL/UNTL and relative locations of performance can be depicted, as shown in Figure 2-5 below. This example shows how several tasks are performed at the JFACC headquarters (HQ) and how another task (i.e., OP 3.2.5.1 *Conduct Air Interdiction of Operational Forces/Targets*) is performed along various routes. A task performed in an area, as opposed to at a specific location (e.g., employing operational command and control warfare (C2W)), can be shown as a shaded area (see Figure 2-5). Additional data describing the spatial characteristics of each task included in a template (e.g., changes over time in the location of task performance) can be linked to each task.

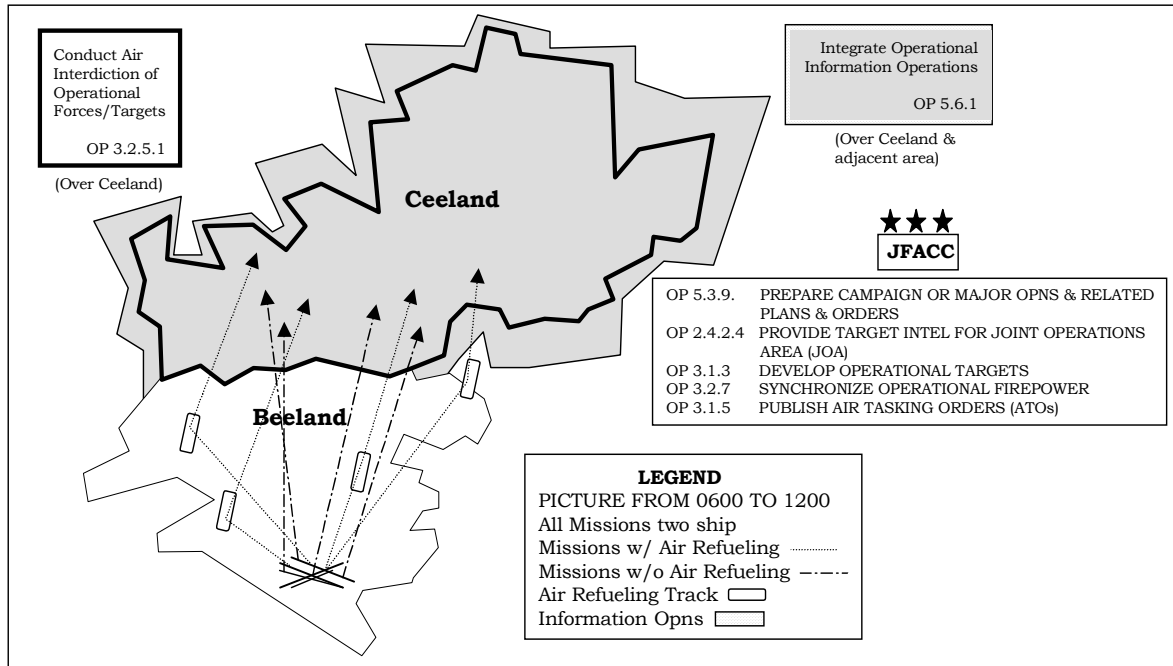

Figure 2-5. Spatial View Operations Template for an Air Interdiction Operation

d. Uses of Operations Templates. Operations template views can represent various task characteristics and interactions among tasks that influence their combined effect on mission success. Template views can be especially useful in understanding the performance relationships among tasks in the context of the commander's concept of operations. Operations templates can aid naval force commanders in identifying the most essential war fighting tasks and in training them in advance of actually conducting such military operations.

10. Conditions. After developing a list of essential tasks, a study must be made of all the conditions under which these tasks may have to be accomplished. Conditions are those variables of an operational environment or situation, in which a unit, system, or individual is expected to operate, that may affect performance. Some are given to the commander (e.g., rules of engagement (ROE) provided to the commander). Most are generally not under the commander's control (conditions of the climate in the area of operations where assigned). Other conditions may be under the enemy's control (e.g., threat posture). Still others are under no one's control (e.g., the weather in an area). The conditions linked to the task are those that reflect the immediate situation or mission context in which tasks must be performed. Not all conditions affect tasks in the same way. Therefore, conditions that greatly affect the performance of some tasks will have little or no affect on the performance of other tasks. Appendix A (Joint Conditions) provides a listing of the conditions that can be used by commanders to describe the conditions under which tasks may be performed as part of their missions. The conditions selected for a MET should be those that have the greatest impacts on performance.

a. Some conditions are shared by both friendly and hostile forces involved in military operations. Such conditions include those related to the climate and weather of an area, its geography, bodies of water within the area, and the space above it. Other conditions, such as those related to the forces involved in a military operation, may be different for friendly and enemy forces (e.g., the types and quality of forces assigned). Also, conditions related to political support for a military operation or the economic strength of an area, may pertain to friendly or enemy areas. To accommodate this, some conditions require the specification of to whom or where the conditions apply.

b. Conditions are organized into three broad categories: physical, military, and civil. (See Appendix A.) Beneath each category, a number of related conditions are organized. For example, conditions that are organized under the physical environment include land, sea, air, and space. Each condition is briefly defined and is assigned a unique reference code beginning with the letter "C." In addition, for each condition several descriptors are provided that allow a user to specify how the condition is likely to exist in a particular mission or scenario. For example, for the condition C 1.3.1, *Climate*, descriptors allow the user to specify whether the climate is tropical, temperate, arctic, or arid.

c. The conditions chosen should also be those that impact the ability to perform that specific task. The commander should review and refine conditions as they apply to missions. The commander should change those conditions linked to tasks as the environment and other situations vary that impact the ability of the command to accomplish the task and mission. While there is no limit in the number of conditions that may be linked to a task, the recommended guide is no more than three to five.

d. Applying Conditions. Conditions were developed according to the following guidelines:

(1) Conditions are factors of the immediate environment. Conditions are aspects of the environment immediately surrounding the performance of a task.

(2) Conditions directly affect the performance of a task. A condition must directly affect the ease or difficulty of performing a task.

(3) Conditions list does not include tasks. Task performance may be constrained or enabled by the level of performance of a related task; however, related tasks are not treated as conditions because they do not directly affect performance of the task.

(4) Each condition has a unique, understandable name. Each condition has a name that distinguishes it from every other condition and from every task.

(5) Conditions may apply to all levels of war and all types of tasks. Some conditions may seem to apply to a particular level of war or a particular type of task (joint vs. Service), but they are, in fact, generic.

(6) Conditions are placed logically in conditions list structure. Each condition was logically placed under the physical environment (land, sea, air, and space), the military

environment (mission, forces, C3-related, intelligence-related, movement-related, firepower-related, protection-related, sustainment-related, and threat-related), or the civil environment (political, cultural, and economic).

(7) Each condition has a single set of descriptors identifying distinct categories. Categories have been developed for each condition that distinguish among several levels at which the condition may be experienced and are based, whenever possible, on objective, quantitative criteria.

(8) Conditions and descriptors are written to be compatible with task/conditions/standards framework. The framework in which conditions are expressed consists of the phrasing of “perform this task under the conditions of....” Therefore, each condition and condition descriptor phrase fits within this framework.

11. Standards, Measures, and Criteria. Measures (or metrics) are linked to tasks to allow a commander to distinguish among varying levels of task performance. Using measures a commander may establish a task standard consistent with Service doctrine, tactics, techniques, and procedures, and mission requirements. Standards may also provide a basis for assessment. The terms “standard,” “measure” and “criterion” are defined below.

STANDARD - A standard provides a way for the commander to express the degree to which an organization or force must perform a task under the specified set of conditions. A standard consists of one or more measures for a task and a criterion for each measure.

MEASURE - Measures provide a dimension, capacity, or quantity description to a task. A measure provides the basis for describing varying levels of task performance and is therefore directly related to a task. For example, the task, MCT 5.1.1, *Provide and Maintain Communications*, which refers to the sending and receiving of information from one unit or organization to another by any means, measures of performance may include the speed with which information is transmitted (queuing time for message transmission) and the accuracy of communications (percent of messages sent to the right addresses with the right content).

CRITERION - The second parameter of a standard is the “criterion”. A criterion defines acceptable levels of performance. It is often expressed as a minimum acceptable level of performance. The combination of the measure and the criterion comprise the standard for a task. Example: *95% of addressees received the messages prior to deadline.*

a. The UNTL methodology of linking a measure and a criterion (the elements of a standard) to a task first demands understanding the task and how that it contributes to mission success. Also critical to linking a measure to a task is understanding the conditions under which the task is performed. Commanders should have a way to *measure* the output of the task so a comparison to the established standard can be accomplished. This process can also aid the commander in readiness assessment, risk assessment and risk management.

b. The standard for a task is set within the framework of the commander's mission and in the context of the conditions that are linked to those missions. Thus, the standard(s) for a task can only be set when: (1) the mission analysis is complete; (2) the linked conditions have been identified and described; and, (3) measures have been selected that reflect the task contribution to mission accomplishment. This means that standards are tied to missions. That is, just because a task has a particular standard on one mission does not mean that the same standard will apply to other missions. A task standard could be the same across missions, but it could also be different for each mission.

(1) Each task can have a standard using one or more measures. A standard can be set using any measure(s) that applies to a task. In some situations, one measure may be sufficient. In others, a commander may have to specify a standard using more than one measure to fully define a required level of performance. For example, in specifying a standard for engaging enemy targets (NTA 3.2, *Attack Targets*) under the condition of overwhelming threat land forces (C 2.9.5.1), measures for both the time to engage (e.g., minutes after initiation of task, ordnance on target) and the accuracy of the engagement (e.g., percent of missions flown/fired achieve desired target damage) may be needed to fully define a required level of performance. The resulting tasks, conditions, and standards will comprise the mission capability requirements for a commander.

(2) A standard for a single task does not normally have to be met by a single component. In many cases in operations, several elements of the force (system types, component commands, coalition members) will be assigned responsibility for a task. Therefore, the assessment of performance will often reflect the aggregated capabilities of multiple force elements.

(3) Task standards reflect the commander's understanding of requirements based on the assigned missions (and the associated concept of operations) and the conditions likely to be experienced in carrying out that mission. Task standards also are established with cognizance of friendly force capabilities (i.e., do not expect a single ship to be as effective as a carrier battle group or a battalion to be as capable as a division).

(4) Task standards are traceable across levels of command. A commander who has established task standards based on an analysis of assigned missions must assume some level of performance for organizations performing command-linked and supporting tasks. For example, in a strategic deployment mission, assume that a functional combatant commander establishes a standard for moving forces to the theater (SN 1.2.5, *Move Forces from POE to POD*). To perform this task successfully, a geographic combatant commander must meet a performance standard on a command-linked task (ST 7.1.4, *Determine and Validate Forces and Cargo to be Deployed or Redeployed*). Also, a component command of the functional combatant command must meet a performance standard on a supporting task (SN 1.2.7, *Coordinate Global Strategic Refueling*). As a result, when each commander establishes their task standards for a mission, they must be aware of the relationship between their task performance and that of the supported/supporting command(s).

c. Usually a small number of measures will be sufficient. On some occasions, one measure is enough, however, in the case of engaging enemy targets, measures for both time and accuracy may be required to fully define the required level of performance.

d. Development of Measures. The development of measures in this instruction was conducted in accordance with the following guidelines.

(1) Measures reflect understanding of the task. The scope of the task and what activities it comprises must be understood.

(2) Measures reflect how a task contributes to mission success. Measures are selected to establish standards based on the context of a mission. The mission establishes the requirement to perform a task, provides the context for task performance (including the conditions under which a task must be performed), determines where a task is performed (one or more locations), determines when a task must be performed, determines the degree to which a task must be performed (implied in the concept of the operation), and provides a way to understand precisely how the performance of a task contributes to mission success.

(3) Measures are sensitive to the impact of conditions on task performance. Examining conditions that can impair task performance during a mission can provide clues as to the key dimensions of performance that should be measured. For example, if the primary targets of intelligence collection are fixed sites (i.e., condition of target mobility), the currency of intelligence and locating data may not be a critical aspect of performance—on the other hand, if the targets at which intelligence collection is aimed are highly mobile, the currency of the collected intelligence and locating data would be a key measure of performance.

(4) Measures reflect key dimensions of task performance. Every task has multiple dimensions of performance that can be measured. At a minimum, most tasks can be measured in terms of the time required to initiate or to complete a task (i.e., response time), the rate at which progress is being made (e.g., rate of movement), an overall level of completion or success (e.g., percent of targets correctly identified, hit rate), size of deviation (e.g., proximity of fires to target), in terms of power (e.g., engagement range), lethality (e.g., rate of kills given a hit), or success (e.g., percent of messages accurately transmitted). Measures should not simply indicate a level of activity (e.g., sortie rate as measure of air interdiction), but must reflect varying levels of real success in task performance.

(5) Measures distinguish among multiple levels of performance. Good measures distinguish among multiple levels of performance (as opposed to a go-no go measure). This can be accomplished most easily using either an absolute numerical scale (e.g., applicable to number, time, or distance) or a relative scale (e.g., proportion of number, time, or distance).

(6) Measures focus on the outputs, results of performance, or on the process. In identifying dimensions of task performance, focus on the outputs or results of performance as opposed to either the inputs/resources applied (e.g., the number of aircraft involved in conducting air interdiction) or the process followed (e.g., number or percentage of sub steps performed correctly

or in the correct sequence). The dimensions of task performance are not peculiar to a specific means for performing a task; rather, they apply to all means that can be employed to perform a task.

(7) Maximize use of context independent measures. Performance measures that are highly context-dependent require detailed information on the mission/scenario to interpret a performance outcome. While no measure is completely independent of its mission context, there is wide variability among measures in this regard. Measures of the time it takes to perform a task (like collect intelligence on targets) are fairly context independent. Measures of rate (like the rate of movement of ships from one location to another) can also be fairly context independent. On the other hand, a measure of the percent of forces deployed by D-Day requires knowledge of the mission or scenario timeline to fully understand the level of performance involved.

(8) Take advantage of the strengths of both absolute and relative scales. Absolute scales are those that, beginning from a start point (usually zero), measure the number of occurrences, the amount of time, or the movement across distance. The advantage of absolute scales is that the result or output is clearly specified. The disadvantage is the lack of information about the adequacy of any particular value (from simply looking at the measure) on the absolute scale. Relative scales are those that compare a particular value to the total and are often expressed as a proportion or percentage (e.g., percent complete). The advantage of relative measures is that they clearly indicate the degree of completion of a task. The main disadvantage is that such measures do not indicate the size or scope of effort on the task.

(9) Keep measures simple. A simple measure requires only a single measurement (e.g., hours to develop an operations order). These measures may be the easiest for operators to understand. A more complex measure might involve a ratio (e.g., ratio of enemy targets destroyed to friendly losses). Such complex measures, while attempting to be more meaningful, actually tend to reflect contributions of more than one task (e.g., number of targets destroyed is related to engaging enemy targets while friendly losses is related to protecting friendly forces and systems).

(10) Take advantage of existing task performance data. If two task performance measures are similar in other respects, pick the one for which performance data is readily available.

12. Developing METLs. A METL is the list of tasks a commander determines are essential to the accomplishment of a mission, under the specified conditions and to a specified standard for each task. Mission analysis is one of the key early steps in identifying the tasks to complete an assigned mission. Mission analysis must include a thorough review of the command's responsibilities under a superior commander's OPLANs and directives. An important initial step in the process of METL development should be a review of the relevant major regional contingency (MRC) and other OPLANs to ensure familiarity with all the requirements of those plans.

- a. Individual COCOM's identify their JMETLs, based on their assigned missions. Subordinate commanders, in development of their mission essential tasks, must support those COCOM tasks. Take for instance the case of a JFC assigned to conduct a mission that will involve task OP 3, *Employ Operational Firepower*. A subordinate Navy ship commander, assigned to support this JFC, may have to include in his or her METL the task NTA 3.2.8, *Conduct Fire Support* to provide naval surface fire support to accomplish the assigned function. Task NTA 3.2.8 is a supporting task of OP 3 and TA 3 (*Employ Firepower* - NTA 3 on the Naval Tactical Task List) in this case. This is a task that *rolls up* vertically to support a superior commander's requirements.
- b. COCOMs may identify tasks that, by implication, must also be accomplished to achieve an objective. Those tasks may not always be specifically identified as COCOM JMETs, however, they may (or may not) be listed as implied tasks that subordinate component or operational commanders must plan for and achieve to ensure success of a mission. An example of implied tasks would be of close air support (one of the JTF commander's tasks is to conduct close air support), implicit in that task for a subordinate naval commander might be the ability to conduct flight operations from a ship, navigate over open ocean, communicate in the appropriate theater communications systems, fly and operate aircraft systems in a night vision goggles environment, as well as place the appropriate ordnance on target.
- c. Before a METL can be developed, the individual METs must be identified from the tasks required to be performed to implement OPLANs, concept plans (CONPLANs), or execute mission orders. METL development follows a three-step process (see Figure 2-6). Step one - Identify the **MET** from specified or implied tasks in assigned missions/tasks, OPLANs, or core competencies. Step two - Determine and assign the **conditions** that apply (variables of the environment that affect task performance). Step three - Establish **standards** consistent with the commander's intent and concept of operations (CONOPs). After determining the METs and the responsible organizations for those tasks (supporting and command-linked units/organizations), the METL is assembled.

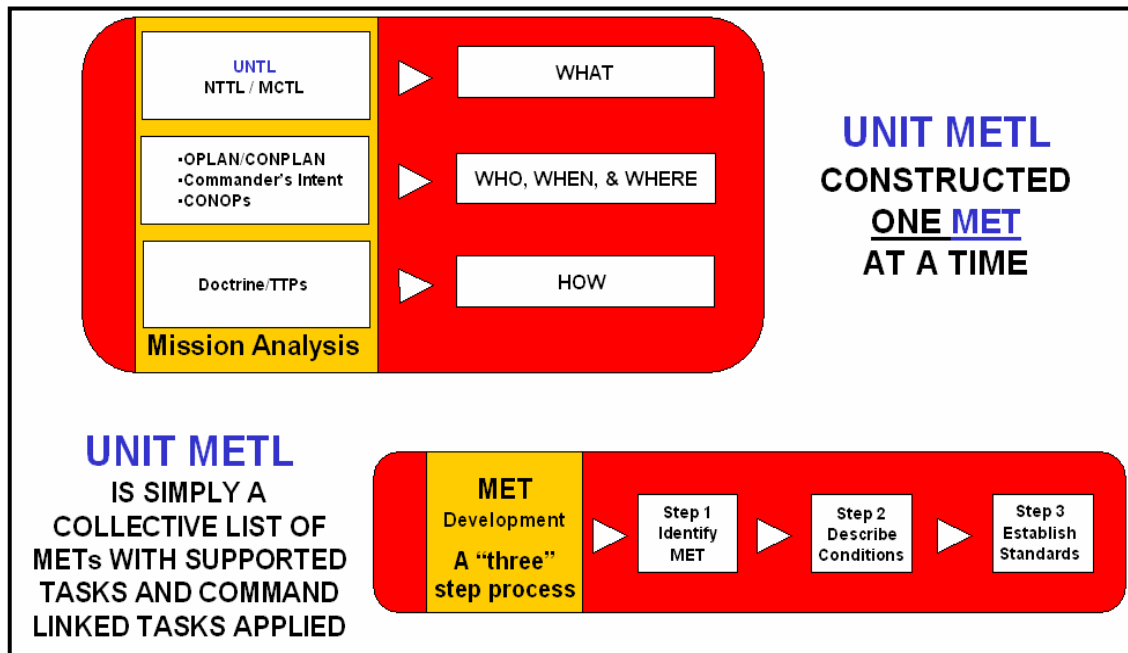

Figure 2-6. METL Development Process

Step 1: IDENTIFY THE MET - Conduct mission analysis and identify specified and implied tasks contained in the guidance. Commanders select a MET based on a review of the tasks to be performed to implement OPLANs, CONPLANs, or execute mission orders. Inputs to this process are: (1) Assigned missions/tasks from higher headquarters, applicable JMETF or higher headquarter METL; (2) OPLAN-derived through commander's mission analysis; (3) Core METs based on a units' designed mission. The tasks identified and defined in the UNTL provide a menu for commanders of "what" activities can be performed without specifying "how" they will be performed or "who" will perform them. A task has a nomenclature, title, definition, and reference documents. Tasks found in the UNTL usually leave off where individual TTPs begin. Some criteria for identifying "mission essential" tasks are contained in paragraph 12f below. After developing a list of essential tasks, a study of the conditions under which these tasks may be accomplished must be made. Then, standards (measures and criterion) must be developed to which those tasks must be performed.

Step 2: DESCRIBE CONDITIONS - Conditions are used in the METL development process to express variables of the environment that affect task performance. Conditions are applied to specific tasks and not overall missions because conditions may affect tasks differently within the context of a mission. Conditions that are relevant affect performance of the task. If the condition does not affect how to train, organize, or equip to perform a task, it is not relevant and should not be used. (For example: The political environment may limit the target sets that in turn affect the ordnance and delivery systems required. The terrain may limit the type of combat units that can operate in the designated area.)

Step 3: ESTABLISH STANDARDS - The final step in developing the MET involves selecting or developing performance standards consistent with the commander's intent and CONOPs for a mission. A standard is the minimum acceptable proficiency required in task performance. All wartime/contingency mission performance requirements should be considered when setting standards. The measures in the UNTL are provided as a guide for commanders and their staffs to establish standards of performance based on their assigned missions. These measures are provided for ease of METL development, but are not intended to be restrictive. The unique characteristics of each scenario may require a unique measure to be developed by the commander.

d. In most cases, METLs will rely on support from subordinate and adjacent commands. These must be reviewed to fully understand the mission. We start from a top-down mission analysis and build links to each level. A lower level METL has tasks that support higher-level METLs. Tasks in the same chain of command that support the commander are "supporting tasks." Senior METL tasks that a junior's METL supports are "supported tasks." Also, we indicate "command-linked tasks," which are those tasks performed by agencies, and other organizations outside the commander's direct control. It is how we show adjacent unit support; it is how joint supply and logistics organizations or national intelligence organizations support a local commander. For example, TRANSCOM supports tasks for all COCOM METLs. The Marine air command and control system (MACCS) supports the JFACC theater air control system (TACS) and vice versa via "command-linked" tasks. When the linkages are complete, you have a spider web-like display of the operation, but you will have a clear framework to articulate current and future requirements.

e. Figure 2-7 below depicts an example of developing a MET and applying supporting and command-linked tasks. Obviously, a MET can have multiple conditions, standards, supporting and command-linked tasks however, this example is simplified to explain the process. A properly constructed MET gives commanders a full perspective of his or her essential tasks and supporting and command-linked tasks. In the example, the supporting unit (HMM-266) and the command-linked unit (PHIBRON-2), each identified a condition peculiar to their task assigned. The commander of HMM-266 will not only need to train to high altitude conditions, but be able to do so with 500 feet above ground level(AGL)/1 mile visibility and be able to land on a ship in sea state 4.

f. **Mission Essential Criteria.** The following are examples of “mission essential” criteria that commanders may utilize:

(1) **Commander’s Guidance.** The commander may want his staff to ensure that sufficient communication links are established in the AOR in order to support the mission. Alternatively, the commander may direct his staff that he desires an exit strategy that will permit a swift redeployment of friendly forces. A basic question in determining the essentiality of a task is: does the task support and/or meet the commander’s guidance?

(2) **Center(s) of Gravity.** A friendly COG might be an aircraft carrier operating in a hostile littoral. In comparing the tasks, which you have selected from the UNTL, you will have to determine if that task will support that COG.

(3) **Suitability/Feasibility:** Is the applicable task suitable and/or feasible? For example: is the task NTA 4.12, *Provide Health Services*, a practical and/or achievable task in a short duration strike mission? It would seem that to establish a massive health service support organization would not be applicable in a small-scale strike and is therefore not suitable or feasible.

(4) **External Units.** Tasks may be performed in support of a higher headquarters, adjacent units or supported units. Focusing on external forces will help units identify capabilities they provide to the force as a whole, while filtering out internally focused supporting activities.

(5) Force Protection. The commander may want to give priority to force protection during a choke point transit or limit collateral damage to civilian facilities close to a target. Does the task in question support this? Again, the commander must decide whether the task does or does not support the criteria (in this case) of force protection.

(6) Critical to Mission Success. If the task is not accomplished, the mission has a high probability of failure. The task identifies the essence of the mission.

(7) Follow-on missions depend on the successful completion of the task.

(8) A superior commander identifies the task as mission essential.

(9) Supporting/Command-Linked Tasks. There are many criteria that can be utilized to determine the essentiality of a particular task. The number and applicability is dependent on the particular operation and related missions.

Once the commander approves the criteria, it is then applied to the candidate METs and the essential tasks are identified for each mission. Again, the commander must approve the criteria in deciding and identifying which tasks are essential. Collectively, those tasks identified as essential in the accomplishment of the command's missions are the command's METL. For training plan development, each mission has a METL that provides the appropriate training focus that will lead to mission accomplishment.

CHAPTER 3

NAVY TACTICAL TASK LIST
(NTTL)

SECTION A GENERAL

1. Introduction. This section provides information specific to Navy/Coast Guard use of the NTTL, with emphasis on the Commander, Fleet Forces Command Navy Warfare Training System (NWTS) and the Navy Training Information Management System (NTIMS).
2. Navy Warfare Training System (NWTS). The NWTS, modeled after the Joint Training System (JTS), consists of the same four phases: Requirements, Plans, Execution, and Assessment. NWTS provides a systematic approach to training that identifies mission-based capability needs in the requirements phase; identifies and codifies prioritized training requirements in a Navy Warfare Training Plan in the planning phase; conducts and evaluates cost-effective and efficient training in the assessment phase; and gathers and analyzes the collective results of naval training in the assessment phase. NWTS is a process where all phases are conducted simultaneously. NWTS is described in more detail in the Fleet Forces Command Fleet Training Strategy (FTS) [COMFLTFORCOMINST 3501.3 (series)].
3. Navy Training Information Management System (NTIMS). NTIMS uses a Web-based (SIPRNET) client server to build, store, and apply NMETLS, Navy Warfare Training Plans, and training resource and requirements models. NTIMS also assists Navy commanders in executing, evaluating and assessing their warfare training programs. Fleet Forces Command (N72) controls NTIMS access.
4. Tasks. Changes in task numbering from the Universal Naval Task List (UNTL) version 2.0 to version 3.0 are summarized in pages 3-A-2 through 3-A-5. Most changes are the result of adding new tasks and the deletion of a number of U.S. Marine Corps tasks, which are now covered in the Marine Corps Task List (Chapter 4).
5. Conditions. The conditions listed in Appendix A are from the Universal Joint Task List (UJTL), which contains conditions for use by all services, but also allows Service-specific conditions to be created. A list of Navy-specific conditions is maintained in the Requirements Module of NTIMS, along with those conditions from the UJTL.
4. Standards. NTIMS provides the ability to link conditions and measures and set standards for each task. Usually a small number of measures will be sufficient. In some cases, one measure is enough, however, in others (e.g., engaging enemy targets), measures for both time and accuracy may be required to fully define the required level of performance. Commanders establish performance standards by selecting or creating a measure, and then assigning appropriate criteria. NTIMS includes the list of measures from the UJTL/UNTL and all NTIMS user-created measures. The complete listing is retained in the Requirements Module of NTIMS. The measures listed below each task in Section B to this chapter are merely examples. The commander may choose measures from NTIMS, modify them as needed, or create more appropriate measures for the task. Once measures are chosen, the commander then assigns criteria for each measure to create a standard for task performance.

CHAPTER 4

MARINE CORPS TASK LIST

SECTION A

GENERAL

1. Introduction. This section provides information specific to Marine Corps commanders in support of development of their unit's METL. In the past, METLs have been used for unit readiness evaluations through the Marine Corps Combat Readiness Evaluation System (MCCRES) and other unit evaluation purposes. USMC Training and Education Command (TECOM) develops Training and Readiness (T&R) manuals based on "unit design" METs/METLs. Under the new Defense Readiness Reporting System (DRRS), commanders are required to report their readiness state based on their unit METL. This new way of reporting unit readiness is often termed "METL based readiness reporting" and is conducted through the use of the Enhanced Status of Resource and Training System (ESORTS), replacing current SORTS reporting.

a. The METL is the commander's tool for remaining focused on mission accomplishment. A METL contains the list of a command's essential tasks with appropriate conditions and performance standards to assure successful mission accomplishment. MCWP 5-1 (Marine Corps Planning Process), MCRP 3-0A, and the Joint Training Manual (CJCSM 3500.03) describe the Mission Analysis and METL development process. It is a simple concept, the METL flows "downhill;" at every level the Mission Analysis process is the same: Review the directives -- look at the Specified Tasks, discern the implied tasks, determine ESSENTIAL TASKS -- figure out what help you need, either from supporting commands (below you) or parallel to you -- identify conditions that will affect the execution of the essential tasks -- and apply standards of performance required to accomplish the tasks.

2. Defense Readiness Reporting System (DRRS). DRRS is a web-based application for the assessment of unit readiness to accomplish essential tasks. DRRS serves as the central registry for unit METLs, and measures the readiness of units to achieve METs to standard.

a. Reporting Units. Reportable units are headquarters and tactical units, assigned with Unit Identification Codes (UICs) by the Service HQ. For the Marine Corps, these units are normally at the battalion/squadron level or higher, but also include separate companies such as regimental headquarters companies and force reconnaissance companies.

b. DRRS accounts. Each reportable unit will require at least two DRRS accounts - one for a unit administrator and another for the unit commander. Unit administrators can customize unit information, approve additional user accounts, build unit METs, and assess unit readiness. Unit commanders edit and approve MET assessments and assess overall readiness. Additional user accounts may be created to assess particular METs, and to build and assess staff supporting tasks. Guest accounts may also be created to facilitate the sharing of METs and readiness assessments.

c. MET development. Once a METL has been developed as outlined in Section 2, it should be documented in DRRS. Procedures for MET development are outlined in paragraph 3 below.

Unit METs are developed by “Core Tasks,” “Major Plans,” and “Named Operations.” See Figure 4-1 below.

(1) “Core Tasks” represent the fundamental capabilities for which a unit was designed or organized.

(2) “Major Plans” are those designated as a “level 4” plan in the Contingency Planning Guidance. Units will develop METs for assigned major plans when directed by higher headquarters.

(3) “Named Operations” are those operations designated as such by the Joint Chiefs of Staff, e.g., Operation IRAQI FREEDOM (OIF).

(4) The Core Task list, assigned Major Plans, and designated Named Operations are each considered a separate mission for the purposes of DRRS assessment.

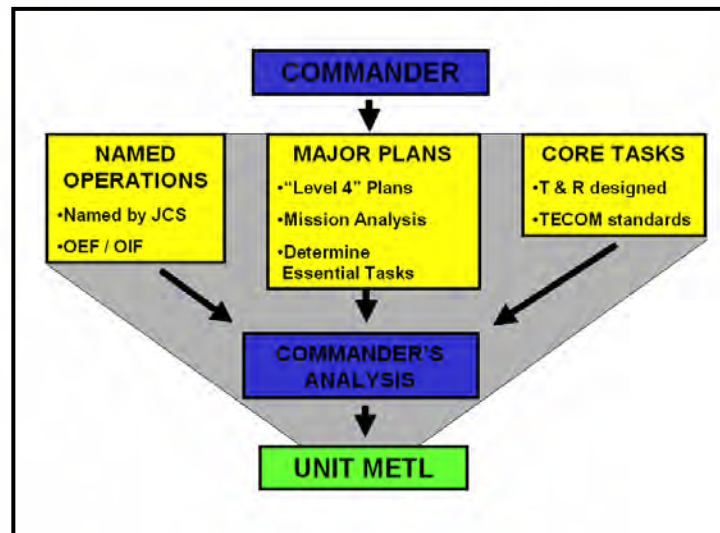

Figure 4-1

d. MET assessment. Each MET is assessed as “Yes,” “Qualified Yes,” or “No.” MET assessments are based on the ability of a unit to accomplish the task to standard under specified conditions. This assessment should be informed by observed performance, resource availability, and military experience/judgment. All assessments will be documented in accordance with the following definitions:

(1) “Yes” (Green) Assessment: The organization can accomplish the task to prescribed standards and conditions. The “Yes” assessment should reflect demonstrated performance in training or operations.

(2) “Qualified Yes” (Yellow) Assessment: The organization is expected to accomplish the task to standard, under most conditions, but this performance has not been observed or demonstrated in training or operations. Organizations assessing their task or mission as a “Qualified Yes” can be employed for these tasks.

(3) “No” (Red) Assessment: The organization is unable to accomplish the task to prescribed standards and conditions at this time.

(4) The MET assessment is essentially a binary assessment: Can the unit accomplish the MET to standard? The decision as to whether the assessment is “Yes” or “Qualified Yes” will be driven by whether the unit has actually observed/demonstrated the capability. Unit MCCRES and T&R standards should support this observation process.

e. Mission Assessment. The unit commander will separately assess each mission. This assessment will also be based on the “Yes,” “Qualified Yes,” “No” basis, but will consider the mission as a whole. The mission assessment should reflect the military experience/judgment on all the tasks and factors that affect the ability to meet mission objectives.

(1) If any of the tasks is assessed as “No” (Red), then the commander must make a judgment as to whether the mission objectives can still be accomplished. Any “No” task would normally preclude an overall mission assessment of “Yes.” If the overall mission is rated other than “No” the commander should clearly explain how the plan will be accomplished despite the inability to accomplish the MET and any mitigation actions that will be taken. In cases where a MET is assessed as “No,” and the overall mission assessment is not “No,” the commander should review the essentiality of the MET in question.

(2) If the majority of the METs are assessed as “Yes” and the remaining METs are assessed as “Qualified Yes,” then the overall assessment should be “Yes.”

(3) If the majority of the METs are assessed as “Qualified Yes” and the remaining METs are assessed as “Yes,” then the overall assessment should be “Qualified Yes.”

3. METL Development in DRRS. Unit METL development in DRRS is a straightforward process if the unit has already developed a detailed METL, including conditions and standards. While DRRS can be a helpful tool in defining tasks, conditions and standards, DRRS METL development should not be undertaken without substantial prior research and refinement.

a. DRRS Admin Tools. The DRRS administrator should take several steps, in order, to ensure that the actual METL development goes smoothly.

(1) “Manage Unit Missions.” This tool is used to build additional Major Plans or Named Operations to the Core Mission of the unit. The Core mission is automatically included for all units.

(2) “Activate / Modify User Role.” This tool is used to activate additional user IDs which have been requested for the unit. DRRS User IDs are requested directly from the DRRS Logon page at <https://drrs.deccpac.disa.smil.mil/index.jsp>.

(3) “Unit Admin.” This tool is used to add or modify staff sections. Individual user IDs are assigned to the various staff sections, allowing them to later be selected as the Point of Contact (POC) for a task. At a minimum, one staff office (normally the “S-3”) must be created so that each MET can be assigned to an Office of Primary Responsibility (OPR).

b. MET creation. Individual METs are created using the “TurboMET” tool. The two basic options for building a MET are to “Import METL” or to “Add Command MET.” “Import METL” will import the entire METL from another unit, adding it to any METs that have already been created. “Add Command MET” allows a unit to build individual METs from scratch. The following procedures are used to add a new Command MET.

(1) Add Command MET. Selecting “Add Command MET” opens a search dialogue. Tasks can be searched by number, by title, or by definition. Additionally, the search can be filtered to all joint and Service task lists, or one particular task list. Tactical units will normally use tasks from their Service task list (e.g., UNTL, MCTL).

(2) Assign MET and Choose Supported Missions. Once a MET has been selected, the administrator will be able to assign the MET to an OPR, one or more Offices of Coordinating Responsibility (OCR), and a primary POC. Missions supported by this task are also selected. All user accounts assigned to the OPR will be able to edit the MET, build staff supporting tasks, and assess the MET. Once this has been accomplished, the administrator should select “Save and go to next step.”

(3) Select Conditions. This section will allow the administrator to select the conditions for the task. A task cannot be complete without at least one corresponding condition. Once this has been accomplished, the administrator should select “Save and go to next step.”

(4) Select Standard Measures. This section will allow the administrator to select the standards for the task. Most tasks already have suggested standards (measures). If suggested measures are not adequate, the administrator can create custom measures. Once custom measures have been created, they will not automatically be selected for use. Instead, they will be added to the list of suggested measures, and can be selected from that section. Selected measures will need to be edited to include a criterion. Once this has been accomplished the administrator should select “Save and return to METL.”

(5) Saving METs to form the unit METL. Once all of a unit's METs have been loaded, DRRS provides worldwide visibility of the METL to all DRRS users throughout the Department of Defense. The METL is automatically loaded into ESORTS to serve as the basis for unit readiness assessment. A detailed MET summary can be opened for each MET by selecting the MET number (e.g., MCT 1.1). This produces a single document containing the task number, title, definition, points of contact, conditions, standards, supported missions, supporting tasks, command-linked tasks, and external commands which have linked to the task in support of their own METL. A set of these MET summaries can be consolidated to form a detailed METL in print form.

Marine Corps Task List (MCTL)

Maneuver

MCT 1 DEPLOY FORCES/CONDUCT MANEUVER

To move forces to achieve a position of advantage with respect to enemy forces. This task includes the employment of forces on the battlefield in combination with fire or fire potential. Maneuver is the dynamic element of combat, the means of concentrating forces at the decisive point to achieve the surprise, psychological shock, physical momentum, and moral dominance which enables smaller forces to defeat larger ones. This task includes the movement of combat and support units. **(JP 3-0 Series, MCDP 1-0, 1-3, NDP 1, NWP 3 Series, 3-02 Series, 4-01, CJCSI 3202.01, CJCSM 3122.03A, NTA 1)**

M4	Kph	Rate of movement.
M5	Time	To initiate movement.

MCT 1.1 Provide Forces

To provide and deploy all Marine Corps combat, combat support, and combat service support units. Forward-deployed Marine air-ground task forces (MAGTFs), with their range of capabilities, are designed to enable the joint force commander to resolve crises and win conflicts. MAGTFs are uniquely suited to support the national security strategy by rapidly projecting the required capability into a foreign setting to abate the crisis. This capability is central to the United States' ability to safeguard its national interests. **(JP 1, 0-2, 3-0, MCDP 1-0)**

M1	Days	Plan the physical relocation of forces and materiel to designated AO.
M2	Days	Identify support activity teams to prepare personnel for deployment.
M3	Days	Identify and establish rear detachment.
M4	Percent	Marines identified as non-deployable.
M5	TBD	

MCT 1.1.1 Provide Security Forces

Security forces are used to gain and maintain enemy contact, protect the main battle force's movement, develop the situation before committing the main battle force and are assigned cover, guard or screen missions. Operations of security forces must be an integral part of the overall offensive plan. The element of the MAGTF assigned as the security forces depends on the factors of mission, enemy, terrain and weather, troops and support available – time available (METT-T). **(JP 1, 0-2, 3-0, MCDP 1-0)**

M1	Percent	MAGTF force required for security force mission.
M2	TBD	

MCT 1.1.1.1 Provide Main Body Forces

Main body forces constitute the bulk of the commander's combat power. It is prepared to respond to enemy contact with the security forces. Combat power that can be concentrated most quickly, such as fires, is brought to bear while maneuver units move into position. The main body maintains an offensive spirit throughout the battle, exploiting any advantageous situations, and engages the enemy as early as possible. **(JP 1, 0-2, 3-0, MCDP 1-0)**

M1	Days	To identify and establish a main body.
M2	Percent	Of assigned main body trained for mission.
M3	TBD	

MCT 1.1.1.2 Provide Reserve Forces

The commander uses his reserve forces to restore momentum to a stalled attack, defeat enemy counterattacks, and exploit success. The reserve force provides the commander the flexibility to react to unforeseen circumstances. Once committed, the reserve's actions become the decisive operation, and every effort is made to reconstitute another reserve from units made available by the revised situation. **(JP 1, 0-2, 3-0, 4-05.1, MCDP 1-0)**

M1	Percent	Of forces identified by commander as a reserve element.
M2	Time	For commander to incorporate reserve into offensive or defensive plan.

MCT 1.1.1.3 Provide Sustainment Forces

The sustaining force maintains a presence ashore over an extended period of time to support continued operations by the joint force commander within the joint area of operations (JAO), and also includes providing logistical sustainment to joint and coalition forces until theater level sustainment is established. **(JP 1, 0-2, 3-0, MCDP 1-0)**

M1	Percent	Of MAGTF trained for sustainment force mission.
M2	TBD	

MCT 1.1.2 Provide Task-Organized Forces

The Marine Corps organizes its operational forces as Marine Corps components and as MAGTFs to provide task-organized, self-sustaining, multipurpose forces to the joint force or naval expeditionary force. These uniquely organized Marine Corps forces can respond to a wide range of operational and tactical missions and tasks, providing an unmatched combination of deployment and employment options. **(JP 1, 0-2, 3-0, MCDP 1-0)**

M1	Time	For commander to identify and detach applicable units(s).
M2	Time	For commander to attach applicable unit(s).
M3	TBD	

MCT 1.1.2.1 Provide Alert Forces

An important type of special purpose MAGTF is the air contingency force (ACF). An ACF is an on-call, task-organized alert force that is maintained by all three Marine expeditionary forces (MEFs). An ACF can deploy within 18 hours of notification. It can be dispatched virtually worldwide to respond to a rapidly developing crisis. The ACF is the MEF's force in readiness. It can deploy independently or in conjunction with amphibious forces, MPFs, or other expeditionary forces. **(JP 1, 0-2, 3-0, MCDP 1-0)**

M1	Yes/No	ACF identified and assigned.
M2	TBD	

MCT 1.1.2.2 Provide Command Element

The command element (CE) is the MAGTF headquarters. It is task-organized to provide the command and control, intelligence, reconnaissance forces, and other support and capabilities necessary for effective planning, execution, and assessment of operations across the warfighting functions to accomplish the MAGTF mission. The CE can exercise command and control within a joint task force from the sea or ashore and acts as a core element around which a joint task force headquarters may be formed. **(JP 1, 0-2, 3-0, 3-30, 3-31, MCDP 1-0)**

M1	Hours	For unit to establish command post.
M2	Time	For commander to establish a command group.

MCT 1.1.2.3 Provide Headquarters Personnel and Infrastructure

Marine Corps bases, stations, and reserve support centers headquarters provide the personnel, infrastructure and facilities that enable and support the operating forces. HQ also provides administrative control, control of resources and equipment, personnel management, unit logistics, individual and unit training, readiness, mobilization, demobilization, discipline, and other matters not included in the operational missions of the subordinate or other organizations. To organize a headquarters for the command and control of designated and organized forces under the duly authorized force commander. This includes developing a command and control structure, a force liaison structure, and effectively integrating force staff augmentees. **(JP 1, 0-2, 3-0, 5-0, 5-00.2, NDP 6, NWP 6-00.1, MCDP 1-0)**

M1	Days	To deploy forward and establish in theater, a task force headquarters element.

MCT 1.1.2.4 Provide Close Quarters Battle (CQB) Marines

To provide Marine Corps maneuver warfare capabilities in seizing and clearing buildings and other urbanized areas. Commanders and small-unit leaders rely on guidance and intent provided by higher headquarters to facilitate decentralized execution while maintaining control and direction in close quarter battles. Success in urban fighting depends upon small units and individual tactical skills. **(JP 3-0, 3-06, MCWP 3-35.3)**

M1	Hours	Attack into a concentrated area of structures, facilities, and population to isolate and secure an objective, or to destroy, capture, or force the enemy to withdraw.

Humanitarian Assistance (HA) operations relieve or reduce the results of natural or manmade disasters or other endemic conditions such as human pain, disease, hunger, or privation in countries or regions outside the U.S. HA provided by U.S. forces is generally limited in scope and duration; it is intended to supplement or complement efforts of HN civil authorities or agencies with the primary responsibility for providing assistance. DOD provides assistance when the relief need is gravely urgent and when the humanitarian emergency dwarfs the ability of

normal relief agencies to effectively respond. HA operation tasks include providing personnel and supplies, and to provide a mobile, flexible, rapidly responsive medical capability for acute medical and surgical care. HA is designed to supplement or complement the efforts of the host nation civil authorities or agencies that may have the primary responsibility. **(JP 1, 3-0, 3-07, 3-07.6, 4-0, MCDP 1-0, NDP 1, 4, NWP 1-14M, 3-02 Series, 3-07, 4-02 Series, 4-04, NTA 6.5.1)**

MCT 1.6.6.9 Conduct Security and Stability Operations (SASO)

To conduct security and stability operations (SASO), a combined arms offensive operation. Combined arms is the full integration of arms in such a way that to counteract one, the enemy must become more vulnerable to another. SASO arms include: maneuver, intelligence, civil action, info ops, PSYOPS, engineering, supporting arms, aviation, humanitarian ops, etc. By combining unique arms as “weapons” on several clearly defined targets, this presents the enemy with a dilemma. In order to counteract the military IO campaign, the enemy must expose himself to the population, making himself vulnerable to CA projects. Patience and clarity is critical when applying SASO arms effectively to achieve mission victory. **(MCDP 1-0)**

M1	Percent	Force trained in SASO.

MCT 2.1.1 Conduct Intelligence Functions

To conduct the six functions of intelligence operations. The intelligence functions are conducted to provide intelligence in support of the decision making process of commanders down to the small-unit level. All six functions are carried out continually during the planning, decision, execution, and assessment (PDE&A) cycle at all levels throughout the force. Particular functions may be stressed more during one phase of the cycle. Different units may emphasize one or two functions over the others based on individual missions. The six functions are: support to

commander's estimate; situation development; indications and warning; support to force protection; support to targeting; and, support to combat assessment. **(JP 2-0, 2-01, 2-01.1, 2-01.3, 2-03, MCDP 2, MCRP 3-2A, MCWP 2-1, 2-3, 2-4, 2-6, 2-21, 2-22, 2-26, 3-35.7)**

M2	Y/N	Commander has provided guidance and direction to intelligence personnel?
M3	TBD	

MCT 2.1.1.1 Support the Commander's Estimate

Intelligence supports the formulation and subsequent modification of the commander's estimate of the situation by providing as accurate an image of the battlespace and the threat as possible. One of the principal tools used in this function is intelligence preparation of the battlespace (IPB), which is a systematic, continuous process of analyzing the threat and the environment in a specific geographic area. This knowledge affords the commander an understanding of the battlespace and the opportunity to exploit enemy critical vulnerabilities. **(JP 2-0, 2-01, 2-01.1, 2-01.3, 2-03, MCDP 2, MCRP 2-3A, MCWP 2-1, 2-3)**

M3	TBD	

MCT 2.1.1.2 Develop the Situation

Situation development provides continuing knowledge of unfolding events to help update the estimate of the situation. It is a dynamic process that assesses the current situation and confirms or denies the adoption of specific courses of action (COAs) by the enemy, and helps to refine our understanding of the battlespace thereby reducing uncertainty and risk. Situation development occurs during execution and provides the basis for adapting plans or exploiting opportunities. **(JP 2-0, 2-01, 2-01.1, 2-01.3, 2-03, MCWP 2-1, 2-3)**

MCT 2.1.1.3 Provide Indications and Warnings

Indications and warning (I&W) serve a protective purpose, providing early warning of potential hostile action. They help prevent surprise and reduce risk from enemy actions that run counter to planning assumptions. **(JP 2-0, 2-01, 2-01.1, 2-01.3, 2-03, MCWP 2-1, 2-3, 2-4)**

MCT 2.1.1.4 Support Force Protection

Force protection is the set of comprehensive security measures, collection activities, and operations that are undertaken to guard the force against the effects of enemy action. Intelligence supports force protection by identifying, locating, and countering foreign intelligence collection, sabotage, subversion, and terrorism capabilities. Support to force protection requires detailed and accurate assessments of threat force capabilities and intentions and facilitates efforts to deny the enemy the opportunity to take offensive action against our forces. **(JP 2-0, 2-01, 2-01.1, 2-01.3, 2-03, 3-0, MCWP 2-1, 2-2, 2-3, 2-4, 2-6)**

MCT 2.1.1.6 Support Combat Assessment

Combat assessment is the process used to determine the overall effectiveness of military operations and identify requirements for future actions. Intelligence supports the entire combat assessment process and is directly responsible for battle damage assessment (BDA), which is one of the principal components of combat assessment. BDA is the timely and accurate estimate of the damage resulting from the application of military force. BDA estimates physical damage to a particular target, functional damage to that target and the capability of the entire target system to continue its operations. **(JP 2-0, 2-01, 2-01.1, 2-01.3, 2-03, 3-0, MCWP 2-1, 2-2, 2-3, 2-4, 2-21)**

To conduct intelligence support functions and operations which provide information for the planning and conduct of tactical actions. The Marine Corps must draw on both strategic and operational intelligence resources and, in certain circumstances, be prepared to conduct intelligence operations at the operational and even strategic level. Intelligence reduces uncertainty and supports the decision making process by describing the battlespace, identifying key factors in the battlespace that can influence operations, defining and evaluating threat capabilities, identifying the enemy's COG and critical vulnerabilities, and assessing enemy intentions. (JP 2-0, 2-01, 2-01.1, 2-01.3, 2-03, MCDP 2, MCRP 2-3A, MCWP 2-1, 2-2, 2-3, 2-4)

To determine the types and scale of operations that are supportable and the impact of significant regional features and hazards, and to evaluate the physical and civil (political, cultural, and economic) environments of the battlespace in order to identify the impact of environment on both friendly and enemy forces. The assessment includes an evaluation of the impact of significant regional characteristics such as the political, economic, industrial, geographic, demographic, topographic, hydrographic, and climatic characteristics. MCT 2.1.2.4 Plan, Direct, and Supervise the Red Cell

The Red Cell is the commander's tool which ensures that enemy capabilities and courses of action (COAs) are thoroughly considered during the development of friendly courses of action. The Red Cell consists of individuals of varied operational backgrounds and specialties that provide operational experience with enemy tactics, weapons, and doctrine to the friendly COAs during the COA war game, and models the likely reactions of a thinking enemy consequently strengthening the operational planning teams (OPTs) COAs. While the OPT conducts mission analysis and COA development, the Red Cell conducts detailed analysis of the enemy in preparation for the war game, and supports the planning efforts of the commander, the staff and the OPT. It ensures the enemy's capabilities/ limitations are realistically considered with respect to proposed friendly COAs, and assist the commander in visualizing the flow of operations, to plan against the full range of enemy capabilities, and provide a thinking and unbiased enemy during the war game. The MAGTF commander uses air reconnaissance to gain intelligence that is vital to the shaping of the battlespace, assists him in understanding the tactical situation, alerts him to new opportunities, and allows him to assess the effects of MAGTF operations on the threat. Intelligence gathered during air reconnaissance missions provides the MAGTF commander with a rapid means of acquiring visual, imagery, and electronic information on enemy activity and installation and the terrain. The Marine Corps relies on a mix of organic, theater, and national air reconnaissance sources to support its intelligence, planning, deployment and operational phases when executing air reconnaissance.

MCT 3.1.1 DECIDE/Determine Commander's Objective, Guidance and Intent

The commander's objectives support the national strategies/desired end state for the conduct of military actions, while the guidance provided with the objectives stipulates particular conditions related to the execution of operations (e.g., limitations on collateral damage). Taken together, the objectives and guidance embody the commander's intent for military operations, and their scope can range from very near term tactical situations to far-reaching campaigns in the geopolitical arena. The commander's intent is to create a change in the adversary's behavior and turn both the tactical and strategic outcomes to a U.S. advantage. **(JP 1, 0-2, 1-0, 2-0, 3-0, 3-30, 3-31, 4-0, 5-0, 6-0, MCRP 3-16A, CJCSM 3122.01/02C/03A (JOPES))**

MCT 3.1.3.3 Develop an Attack Guidance Matrix (AGM)

To develop an attack guidance matrix (AGM), a document that tells how, when, and to what effect a high payoff target (HPT) will be engaged. The AGM is incorporated into the maneuver and fire support plans. It is the commander's attack guidance and is designed to support his plan. An AGM that supports the division commander's plan may not support a regiment or battalion commander's plan. The AGM offers primary and alternate weapon selection options, thereby

expediting execution decisions. The JFC also provides guidance to component commanders to allow them the flexibility to make an effective selection decision for employing the “best capable” attack asset. Component commanders use AGM for this purpose. (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, 3-23.2, 3-25, CJCSM 3122.01/02C/03A (JOPES))

MCT 3.1.3.4 Identify Target Selection Standards

To identify target selection standards (TSS) which establishes criteria to distinguish between known targets and suspected targets based on the attack system’s target location error (TLE) requirements, size and status of enemy activity, and timeliness of information. TSSs and TLEs are used by fire support coordination centers (FSCCs) and attack assets to help plan and direct supporting intelligence requirements/operations and to quickly identify targets for attack and confirmation. (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, 3-23.1, 3-23.2, 3-25, CJCSM 3122.01/02C/03A (JOPES))

MCT 3.1.3.5 Identify Requirements for Battle Damage Assessment (BDA)

To identify the requirements for Battle Damage Assessment (BDA). The commander may specify targets of a critical nature that require immediate BDA to determine effects and support rapid combat assessment (CA). Requirements will be incorporated into the collection plan and may be classified as commander’s priority intelligence requirements (PIR). When possible, fire support organizations provide initial BDA to the FSC and the supporting intelligence officer on targets attacked. (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, 3-16.1, 3-23.1, 3-23.2, 3-25, CJCSM 3122.01/02C/03A (JOPES))

Specific force allocations (e.g., air sorties, nuclear weapons, and transportation) are conducted through an apportionment process. The MAGTF commander works closely with and may receive taskings from higher commanders in the apportionment process. The MAGTF commander, based on recommendations by the ACE commander, determines the allocation of aviation force effort within the MAGTF, including allocated close air support (CAS) sorties. The GCE commander recommends allocation of fire support assets to accomplish essential fire support tasks (EFST). Assets may include projected or mechanical smoke, indirect fires (suppress, neutralize, destroy, obscure, screen), family of scatterable mines (FASCAM), Copperhead (CPHD), and electronic warfare (EW). (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, 3-25, CJCSM 3122.01/02C/03A (JOPES))

MCT 3.1.4.4 Develop Fires Portion of the Operations Order (OPLAN/CONPLAN)

To develop a Plans/Target Section of the OPLAN/CONPLAN that contains all planned fire support coordination functions. In coordination with future operations and future plans, the plans section develops the MAGTF commander's concept of fire support. The fire support plan may be written as an appendix to the OPLAN/CONPLAN also. The appendix would contain information to convey the commander's plan for fire support. It restates the current situation and the fires paragraph. The execution paragraph includes the commander's intent and each supporting arm's tasks. (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MWCP 3-16, 5-1, CJCSM 3122.01/02C/03A (JOPES))

MCT 3.1.5.1 Execute Attack Guidance on Targets In Support of the Commander's Plan

The MAGTF Plans and Target section of the Force Fires Coordination Center (FFCC) plans, coordinates and executes lethal and nonlethal fires in support of the MAGTF commander's plans and concept of operations. This section recommends targeting guidance, priorities, and asset allocation, to the MAGTF commander for approval or modification. Fire support planning and targeting products are handed off to current fires in the combat operations center (COC) for execution. MCT 3.1.6 ASSESS/Conduct Combat Assessment

To conduct battle damage assessment, physical damage assessment, functional damage assessment, and target system assessment, and munitions effects assessment, which collectively comprise combat assessment (CA), to determine re-attack recommendations. CA reveals if the commander's guidance is met and determines the overall effectiveness of force employment. (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, 3-23, 3-23.1, 3-23.2, 3-26, CJCSM 3122.01/02C/03A (JOPES))

M1	Time	To gather combat assessment intelligence.

M3	TBD	

MCT 3.1.6.1 Assess Battle Damage Assessment (BDA)

Battle damage assessment (BDA) is the timely, accurate assessment and estimate of damage resulting from the application of military force, lethal or nonlethal, against a target. At the tactical level, BDA provides commanders a snapshot of targeting effectiveness and enemy status, and helps to determine the effects of attacks and other force employment on the enemy and if re-attack of a target is necessary. BDA consists of three elements: physical damage, functional damage and target system assessment. (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, 3-23, 3-23.1, 3-23.2, 3-26, CJCSM 3122.01/02C/03A (JOPES))

M1	Time	To gather battle damage intelligence.
M2	Time	To prepare functional damage to targets report.
M3	Percent	Of targets requiring re-attack.
M4	TBD	

MCT 3.1.6.1.1 Assess the Physical Damage to Targets

To assess the quantitative extent of physical damage through munitions blast, fragmentation, and/or fire effects to a target. This assessment is based on the most immediately available data. Typically, data originates from operational forces that cannot conduct detailed observation of weapons effects because they are engaged with enemy forces. Thus, initial Phase I analysis may consist of nothing more than a "hit" or "no-hit" call provided by the shooter. (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, 3-23, 3-23.1, 3-23.2, 3-26, CJCSM 3122.01/02C/03A (JOPES))

M1	Time	To gather physical damage to targets intelligence.
M2	Time	To prepare physical damage to targets report.
M3	TBD	

MCT 3.1.6.1.2 Assess the Functional Damage to Targets

To assess functional damage which describes the estimated effect of attacks and other force employment on the target's ability to perform its intended mission. It may also include an estimate of the time required for the enemy to reconstitute or replace the target functions destroyed or degraded. Tactical units provide input to their intelligence sections to support

functional damage assessment, which is usually conducted at the MAGTF component or theater level. (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, CJCSM 3122.01/02C/03A (JOPES))

M2	Time	To prepare functional damage to targets report.
M3	TBD	

MCT 3.1.6.1.3 Assist Theater and National Level Intelligence Agencies with Assessment of the “Target System”

Target system assessment is conducted by theater and national level intelligence agencies. It is the assessment of all targets situated in a particular geographic area and that are functionally related; and, assessment of a group of targets that are so related that their destruction will produce some particular effect desired by the attacker. Target system assessment is a broad assessment of the impact and effectiveness of all types of attacks and other employment of forces against an entire target system’s capability (e.g., an enemy’s integrated air defense system (IADS)). (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, CJCSM 3122.01/02C/03A (JOPES))

M1	Time	To gather Target System intelligence data.
M2	Time	To prepare Target System report.
M3	TBD	

MCT 3.1.6.2 Conduct Munitions Effects Assessment

To conduct munitions effects assessment concurrently and interactively with BDA, assessing the weapon systems and munitions employed. The assessment determines and recommends any required changes to the methods, tactics, weapon system, munitions, fusing or delivery parameters to increase effectiveness. At the tactical level, fire support planners make this assessment by comparing expected results from tactical and technical decisions made during the deliver phase with BDA. (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, 3-23, 3-23.1, 3-23.2, 3-26, CJCSM 3122.01/02C/03A (JOPES))

M1	Time	To assess munitions effects.
M2	Time	To prepare munitions effects report.
M3	TBD	

MCT 3.1.6.3 Make Re-attack Recommendations

Based on BDA and munitions effects assessment, the FSC and G-2/S-2 advise the commander on re-attack of targets and further target selection to achieve his objectives. Re-attack recommendations consider objective achievement, target and air point selection, attack timing, tactics, and weapon system and munitions selection. (JP 1, 0-2, 2-01.1, 2-01.3, 3-0, 3-09, 3-30, 3-31, 3-60, 5-0, 5-00.1, 5-00.2, MCWP 3-16, 3-23, 3-23.1, 3-23.2, 3-26, CJCSM 3122.01/02C/03A (JOPES))

MCT 3.2.1 Conduct Fire Support Tasks

To conduct fire support tasks in relation to supporting forces in contact; supporting the commander's concept of operation; integrating fire support with the scheme of maneuver; and, sustaining fire support. These tasks give the commander and his fire support representatives a frame of reference to evaluate the overall effectiveness of fires. They serve as unifying factors for supporting arms. Fire support tasks during offensive operations would include: preparation phase, movement to contact and potential meeting engagements, support during an attack, support during consolidation, and support for exploitation. (JP 1, 0-2, 3-0, 3-01, 3-02, 3-01.1, 3-01.4, 3-01.5, 3-03, 3-05, 3-05.2, 3-06, 3-07.1, 3-07.2, 3-08, 3-09, 3-09.1, 3-09.3, 3-10.1, 3-18, 3-30, 3-31, 3-51, 3-52, 3-53, 3-60, MCWP 3-16, 3-23, 3-23.1, 3-23.2, 3-26)

This task enhances the friendly force's survivability and increases their freedom of maneuver. Individual fire support assets support forces in contact in many ways (e.g., artillery supports forces in contact by performing its traditional roles of close support and counterfire). (JP 1, 0-2, 3-0, 3-01, 3-02, 3-01.1, 3-01.4, 3-01.5, 3-03, 3-05, 3-05.2, 3-06, 3-07.1, 3-07.2, 3-08, 3-09, 3-09.1, 3-09.3, 3-10.1, 3-18, 3-30, 3-31, 3-51, 3-52, 3-53, 3-60, MCWP 3-16, 3-16.1, 3-23, 3-23.1, 3-23.2, 3-25, 3-26)

M2	Time	For response of selected target attack systems.
M3	Minutes	After target identification to complete attack.
M4	TBD	

MCT 3.2.1.3 Integrate Fire Support with the Scheme of Maneuver

Integrating fire support with the scheme of maneuver requires precise arrangement of coordinated activities in time, space, and purpose to produce the most effective fires. It provides the right attack means delivered on the right target at the right time, creating a combined arms effect. Integration must occur within the supporting arms and the other warfighting functions (maneuver, intelligence, command and control, logistics and force protection). To support the MEFs maneuver by engaging land and sea targets with available and appropriate MEF fire support systems in cooperation with maneuvering forces. (JP 1, 0-2, 3-0, 3-01, 3-01.1, 3-01.4, 3-01.5, 3-02, 3-03, 3-05, 3-05.2, 3-06, 3-07.1, 3-07.2, 3-08, 3-09, 3-09.1, 3-09.3, 3-10.1, 3-18, 3-30, 3-31, 3-51, 3-52, 3-53, 3-60, MCWP 3-2, 3-16, 3-22, 3-23, 3-23.1, 3-23.2, 3-25, 3-25.4, NDP 1, NWP 3 Series)

Targeting objectives are tied directly to the maneuver commander's guidance and what must be done to the enemy to meet the commander's desired effects of fires. Disrupt, delay, limit, destroy and divert are terms used to describe in achieving targeting objectives. Targeting objectives entail the analysis of enemy situations relative to the objectives, mission, and the capabilities at the commander's disposal, in order to identify and nominate specific vulnerabilities that, if exploited, will accomplish the commander's intent through disrupting, delaying, limiting, or diverting enemy forces or critical resources. (JP 1, 0-2, 3-0, 3-01, 3-02, 3-01.1, 3-01.4, 3-01.5, 3-03, 3-05, 3-05.2, 3-06, 3-07.1, 3-07.2, 3-08, 3-09, 3-09.1, 3-09.3, 3-10.1, 3-18, 3-30, 3-31, 3-51, 3-52, 3-53, 3-60, MCWP 3-2, 3-16, 3-22, 3-23, 3-23.1, 3-23.2, 3-25, 3-25.4, 3-26)

MCT 3.2.3 Conduct Aviation Delivered Fires

The MAGTF commander, based on recommendations by the ACE commander, determines the allocation of aviation effort within the MAGTF. The air section assists the current fires section and is directly responsible for all matters pertaining to the use of aviation fire assets in battle. It maintains close contact with the Marine Tactical Air Command Center (TACC), monitors the Air Tasking Order (ATO), and focuses on reactive targeting in the MAGTF deep battle per targeting principles. Aviation electronic warfare (EW) aircraft protect assault support aircraft through electronic attack, electronic support, and electronic protection. Electronic attack can be used to deceive the enemy by sending misleading information about assault forces' speed, altitude, direction, and size and involves the use of electromagnetic, directed energy, or anti-radiation weapons to attack personnel, facilities, or equipment with the intent of degrading, neutralizing, or destroying enemy combat capability and is considered a form of fires. (JP 1, 0-2, 3-0, 3-01, 3-02, 3-01.1, 3-01.4, 3-01.5, 3-03, 3-05, 3-05.2, 3-06, 3-07.1, 3-07.2, 3-08, 3-09, 3-09.1, 3-09.3, 3-10.1, 3-18, 3-30, 3-31, 3-51, 3-52, 3-53, 3-60, MCWP 3-2, 3-16, 3-22, 3-22.2, 3-23, 3-23.1, 3-23.2, 3-24, 3-25, 3-25.4, 3-26)

MCT 3.2.3.1 Conduct Offensive Air Support (OAS)

Offensive air support (OAS) is conducted against enemy installations, facilities, and personnel to directly assist in the attainment of MEF objectives by the destruction of enemy resources or the isolation of his military force. The firepower, mobility, and flexibility provided by OAS are critical in establishing favorable conditions for deep, close, and rear operations. The principal effects created by OAS are neutralization and destruction. (JP 1, 0-2, 3-0, 3-01, 3-01.1, 3-01.4, 3-01.5, 3-03, 3-05, 3-05.1, 3-05.2, 3-06, 3-07.1, 3-07.2, 3-08, 3-09, 3-09.1, 3-09.3, 3-10.1, 3-18, 3-30, 3-31, 3-40, 3-51, 3-52, 3-53, 3-60, MCWP 3-23, 3-24, 5-11.1, NDP 1, NWP 3-01.10, 3-01.12, 3-22.5 Series, 3-56, Navy-wide Air Warfare Plan)

MCT 3.2.3.1.2 Conduct Deep Air Support (DAS)

To conduct air action against enemy targets at such a distance from friendly forces that detailed integration of each mission with fire and movement of friendly forces is not required. Deep air support (DAS) missions are flown on either side of the fire support coordination line; the lack of a requirement for close coordination with the fire and movement of friendly forces is the qualifying factor. These military actions are designed to isolate, shape, and dominate the battlespace and influence future operations. A MARFOR commander and staff, to include the Deep Ops Cell, will conduct deep targeting to support shaping actions and concept of operations. Fire support coordination is a continuous process of evaluating fire support needs or missions, analyzing the situation, and planning and orchestrating the implementation of the fire support plan while in a continually changing environment. The process enables the commander to use his available firepower to influence the action while ensuring the safety of his troops. The fire support coordination center (FSCC) is a single location in which are centralized communications facilities and personnel incident to the coordination of all forms of fire support. Facilities, equipment, and material are provided by the headquarters to which the FSCC belongs. Supporting arms units provide representatives and equipment necessary for conducting coordination targeting, and communications functions for their respective arms. Supply is separated into ten classes based on physical characteristic or purpose, and requires the longest forward planning and most detailed planning data system to sustain the MAGTF's throughput requirements and includes six functions: requirements determination (routine, preplanned, or long range), procurement, storage, distribution, salvage, and disposal. To coordinate the transportation of supplies from vessels in stream to the shore when other means are unavailable (i.e., lack of port facilities). To construct, maintain, and operate Logistics Over-The-Shore (LOTS) and Joint LOTS facilities to provide for movement of equipment, personnel, and supplies from amphibious and follow-on echelon shipping in the absence of established port facilities. This task is accomplished through the erection of elevated causeway sections, lighterage for ship-to-shore transport, and the emplacement of Amphibious Assault Bulk Fuel Systems (AABFS) and Offshore Petroleum Distribution Systems (OPDS). (JP 1, 4-0, 4-01.6, MCWP 4-1, 4-11.7, NDP 1, 4, NWP 3-02.21, 4-01 Series, NTTP 3-02.3)

The Marine Corps is given special funds for the purchase of Class VII (major end items), or are given the items as initial issue. Acquisition of repair parts and maintenance supplies required for these items will be the responsibility of the Marine Corps. Secondary items are purchased through stock funds (operating budget funds). Wellness requires continuous attention before, during, and after deployment to sustain maximum readiness and warfighting capability. To coordinate health service maintenance in the operational area to include, but is not limited to, medical plans and requirements, assistance to casualty estimates, identify medical requirements (Class VIII and medical treatment facilities (MTF)), medical regulation, echelon of care planning, medical readiness, the management of health services resources, such as personnel, money, and facilities; preventive and curative health measures; evacuation of the wounded, injured, or sick; selection of the medically fit and disposition of the medically unfit; blood management, medical supply, equipment, and maintenance thereof; combat stress control; and medical, dental, veterinary, laboratory, optometric, medical food, and medical intelligence services. This task includes actions of the Theater Patient Movement Requirements Center (TPMRC) and the Joint Blood Program Office (JBPO). **(JP 4-0, 4-01, MCWP 4-1, 4-11, 4-11.1, NDP 1, 4, NWP 4-01 Series, 4-08 Series, NAVSUP PUB Series)**

MCT 4.5.5 Conduct Casualty Evacuation

Coordination of casualty movement and evacuation is especially critical during operations when casualties must be moved from shore to task force ships. When properly followed, the medical regulating process ensures that patients move only as far rearward in the continuum of care as their health needs dictate which, in turn, assures the efficient and effective use of the limited HSS assets available to the MAGTF. Evacuation operations are part of a casualty management system and designed to coordinate the movement of casualties from the battlespace or site of injury, or onset of disease to a facility that can provide the necessary treatment capability. Medical regulating is the process of selecting destination medical treatment facilities (MTFs with the necessary HSS capabilities for patients being medically evacuated in, between, into, and out of different theaters of geographic combatant commands and CONUS. MAGTF aviation basing considerations include versatility, capability, vulnerability, footprint, and sustainability. Whenever possible, shore-based ACE operations exploit existing facilities in the area of operations and Host-government airfields are used when available and tactically acceptable. This includes planning and coordinating for intermediate support bases, flight ferry operations, forward operating bases, FARPs, expeditionary airfields, setting up and maintaining aviation ammunition storage facilities. Tasks include providing meteorological services of weather observation, collection, analysis, forecasting, determination of tidal and current conditions, predicted surf conditions, storm evasion tracks, and storm sanctuary sites. To conduct individual and unit training to attain combat proficiency. To use management principles in a manner that maximizes training results and focuses individual and unit training priorities on the wartime mission. The Marine Corps' training system is a standards-based system and is built around established individual and unit performance standards for specific tasks. A training standard measures collective or individual performance based on task accomplishment and does this for each of the tasks that a unit or an individual Marine is expected to perform. (MCRP 3-0A)

To establish criteria and instructions relative to selecting, screening and preparing enlisted Marines for assignment to Special Duties and Independent Duties. Special Duty assignments involve demanding duties or duties demanding an unusual degree of responsibility. In this context, duties normally are considered demanding if they require an extraordinary effort for satisfactory performance. A special duty assignment is considered to have an unusual degree of responsibility when a heavy personal burden is placed on the member to ensure the successful accomplishment of assigned duties. Currently, Special Duty assignments include: Marine Security Guard, Marine Corps Security Force Guard, Marine Corps Security Force Cadre Trainer, Marine Corps Security Force Close Quarters Battle Team Member, Recruiter and Drill Instructor. Examples of Officer Special Duty assignments are: Foreign Area Officer, Regional Area Officer, Special Education Program, Marine Officer Instructor, Liaison, Security Forces, etc. **(MCO P1326.6D)**

MCT 4.7.1.4 Conduct Family Readiness Training

To conduct focused effort on prevention and education that enables the Marine Corps families to be armed with vital knowledge and essential leadership skills necessary to attack and prevent situations before they develop into serious problems which negatively impact the mission readiness of individual Marines, the commands, and the readiness of the families to succeed as partners in a challenging way of life. The Marine Corps Family Team Building (MCFTB) staff, Marine Corps Community Services (MCCS), offer five various family readiness training programs: Key Volunteer Network (KVN); Lifestyle, Insights, Networking, Knowledge, and Skills (LINKS); Spouses' Leadership Seminar; Prevention and Relationship Enhancement Program (PREP); and, the Chaplains' Religious Enrichment Development Operations (CREDO).

KVN is an integral part of a Marine Corps unit family readiness program and is the primary communication link between the commanding officer and the unit families for the enhancement of mission readiness. The KVN supports the spouses of the unit Marines by providing communication from the command, serving as a source for information and referral services and by helping foster a sense of community within the unit. The KVN offers literature and courses designed to assist Marine Corps families. The KVN for the Reserve community faces unique challenges as many families of a reserve unit are often geographically dispersed with varying access to military resources. The task of providing adequate communication, information and referral may require more volunteers than a unit whose families reside in one geographic area such as a Marine Corps installation. Because of this challenge, Reserve unit commanding officers may appoint a parent of a unit Marine to serve as a Key Volunteer. These parents often have insight into local resources and assistance available to unit families. LINKS is a volunteer, team-mentoring program, designed by Marine spouses for spouses. The curriculum focuses on spouses new to the Marine Corps community, assisting them in adapting to the unique challenges that Marine Corps military life often presents, and provides valuable resources to enable them to help themselves during deployment circumstances. SCR provides secure voice communication and supports limited data information exchange. SCR in the VHF and UHF bands is normally limited to line of sight. In the HF band, SCR can support long-range communications, albeit at the expense of mobility. SCR SATCOM provides mobility, flexibility, and ease of operation with unlimited range. Attention to operator maintenance of the radio equipment, antennas, cable assemblies, and equipment grounding, as well as, site planning and selection, is essential to reliable communications. MCT 5.1.1.5 Provide Digital Switched Backbone Communications

The MAGTF digital switched backbone (SBB) comprises the switching, routing, and wideband transmission systems that provide the high-capacity communications backbone for the MAGTF tactical communications network, as well as, connectivity with the Defense Information System Network (DISN). It is the tactical equivalent of commercial local and long-distance networks and, in some situations, interfaces with and uses those commercial networks. The SBB has the flexibility to adapt to support the unfolding tactical situation and overall scheme of maneuver. The term, digital backbone, refers to the tri-service tactical (TRI-TAC)-based circuit switched communications network used synonymously with switched backbone, under a joint program of the Marine Corps, Air Force and Army. This equipment provides interoperable, secure and deployable voice and data digital switching and transmission systems for tactical forces operating in a joint environment. (MCWP 3-40.3)

The GCCS provides a fused and shared picture of the battlespace together with the essential planning and assessment tools required by combatant commanders and their subordinate commanders. The Defense Information System Network (DISN) provides support for exchange of voice, data, imagery, and video from strategic to tactical levels, at all echelons, in garrison or when deployed. **(JP 6-0, 6-02, MCWP 3-40.1, 3-40.3)**

MCT 5.1.2.3 Prepare Communications and Information System (CIS) Plans, Orders, and SOPs

Effective C2 depends on the effective and efficient operation of a communications information system (CIS). These systems provide the means to develop COP; to prepare and rapidly disseminate OPLANs and OPORDs; and to monitor, direct, and coordinate maneuver, fires, and logistics. Once a CIS plan or annex is completed and approved, it must be implemented effectively. Close supervision and frequent examination of the status of information systems and communications networks by the communications information system officer (CISO) and staff are essential. Plans will inevitably be modified as the operational situation develops. The CISO and staff must keep abreast of developments and be prepared to adapt the CIS plan to the changing situation to support and maintain MAGTF operational tempo. Responsibility for installing, operating and maintaining CIS will be shared between CIS specialists and functional area users. **(JP 6-0, 6-02, MCWP 3-40.3)**

M1	Yes/No	CIS Plan complete.

M3	TBD	

MCT 5.1.2.4 Provide Communications Security (COMSEC, TRANSEC, TEMPEST, Cryptosecurity)

MAGTF C2 relies on the confidentiality, availability, and integrity of tactical communications networks and information systems. Protecting these systems from exploitation, disruption, or destruction is of highest priority. Communications security (COMSEC), computer security (COMPUSEC), transmission security (TRANSEC), emission security (TEMPEST) and cryptosecurity, are important considerations during the planning of any operation. COMSEC is the protection resulting from all measures designed to deny unauthorized persons information of value that might be derived from the possession and study of telecommunications or to mislead unauthorized persons in their interpretation of the results of such possession and study. To maintain surprise, it is necessary to protect communications from enemy exploitation while ensuring unimpeded use of the electromagnetic spectrum. Measures must also be instituted to control access to information and protect information systems and communications networks. **(JP 6-0, 6-02, MCWP 3-40.3, 3-40.4, 3-40.5)**

MCT 5.1.3.2.1 Establish/Maintain Enhanced Position Location Reporting System (EPLRS)

To establish and maintain the enhanced position location reporting system (EPLRS), a ground-based radio-navigation (zone, corridor, and line boundary) system. EPLRS requires detailed planning so that it can support the operational scheme of maneuver. Continuous coordination between the operations officer and communication-electronics officer of operational HQ throughout the MAGTF is necessary for effective employment of EPLRS. **(MCWP 3-40.3)**

M1	Days	To establish EPLRS.

M3	TBD	

MCT 5.1.3.2.2 Establish/Maintain Blue Force Tracker (BFT)

To establish and maintain the Blue Force Tracker (BFT) System, a satellite-based tracking and communication system. The BFT is a digital command and control system that provides on the move, near real time, situational awareness to the vehicle mounted platform level. The systems share PLI, text messages and other information with other BFT equipped units across the battlefield. The BFT network provides commanders the ability to digitally control and monitor their subordinate units' status and position. **(MARCORSYSCOM Informational Paper)**

M1	Days	To establish BFT.
M2	Percent	Of required BFT equipment in theater.
M3	TBD	

MCT 5.2 Prepare Plans and Orders

To communicate the commander's intent, guidance, and decisions in a clear, useful form that is easily understood by those who must execute the order. An order is a written or oral communication that directs actions and focuses a subordinate's activities toward accomplishing the mission. The order should only contain critical or new information not routine matters normally found in standing operating procedures. As appropriate, the chief of staff or deputy MARFOR commander directs orders development. **(JP 2-0, 3-0, 5-0, 5-00.2, MCWP 5-1, NDP 5, NDP 6, NWP 5-01)**

M1	Time	Available to complete planning.
M2	Time	To complete planning.
M3	Percent	Of forces available, actually employed in plan.
M4	Modifications	Made to plan in order to attain commander's approval.

MCT 5.2.1 Conduct Rapid Response Planning Process (R2P2)

Procedures for the rapid coordination, planning and execution process (R2P2) must be established and practiced in order to attack targets within the shortest possible time. A delay in the delivery of fires on a target may jeopardize the success of the entire force. A characteristic of artillery is speed in executing fire missions, regardless of weather, visibility, or situation. This rapid action allows close integration with maneuver. Responsiveness can be obtained through organization for combat, multiplicity in communications, and continuous combat service support. **(MCDP 5, MCWP 5-1)**

M1	Time	Receipt of mission to execution.
M2	Percent	Of force trained to execute R2P2.
M3	TBD	

MCT 5.2.1.1 Man/Conduct Crisis Action Team (CAT) Operations

To man and conduct crisis action team (CAT) operations. Crisis action planning is conducted in response to crises where national interests are threatened and a military response is being considered, and promotes the logical, rapid flow of information and the timely preparation of campaign plans or OPORDs. The CAT may initiate the planning process, develop situational awareness, and access previously prepared and emerging planning products from the Joint Operation Planning and Execution System (JOPES), and may assume the functions of a rear element, primarily maintaining situational awareness for follow-on and supporting units. The CAT consists of key planners from the CE and the major subordinate elements (MSEs). Using the Rapid Response Planning Process (RRPP), these planners ensure the Marine Expeditionary Unit (MEU) is prepared to launch operations within six hours of receiving orders. This six-hour standard is the trademark of the MEU. **(JP 5-0, MCWP 5-1)**

M1	Percent	Of CAT personnel trained.
M2	Time	Receipt of mission to execution.
M3	TBD	

MCT 5.2.1.2 Initiate MEU[SOC] Mission Execution within Six Hours of Receipt of Mission

The Marine Expeditionary Unit (Special Operations Capable) (MEU[SOC]) normally exercises command and control from a seabase. Ongoing communication and information systems (CIS) upgrades improve the capability to support MEU(SOC) operations and mission execution within six hours of receipt of mission. These upgrades are meant to provide the required communications connectivity and C2 capability needed for the MEU(SOC) to conduct both amphibious ready group (ARG) and split-ARG operations. A MEU(SOC) unit provides the President and the unified combatant commanders with forward-deployed units that can conduct a variety of quick reaction, sea-based, crisis-response options in either a conventional amphibious/expeditionary role or in the execution of maritime special operations. **(MCWP 3-40.1, USMC Concepts and Programs)**

M1	Time	Receipt of mission to execution.
M2	Percent	Of force capable of conducting execution within six hours.
M3	TBD	

MCT 5.2.2 Conduct Deliberate Planning (Marine Corps Planning Process (MCP))

To make estimates and decisions based on assigned, projected, or implied tasks. To examine all aspects of potential operations, including options to alter planned or ongoing actions, and determine the acceptable degree of risk. It also includes formulating the commander's guidance and intent; developing, analyzing and approving a concept of operations and course of action. This task includes development of the operations order. **(JP 2-0, 3-0, 5-0, 5-00.2, MCWP 5-1, NDP 5, NDP 6, NWP 5-01)**

M1	Time	Available to complete planning.
M2	Time	To complete planning.
M3	Percent	Of forces available, actually employed in plan.
M4	Modifications	Made to plan in order to attain Commander's approval.

MCT 5.2.2.1 Conduct Mission Analysis

To examine all available information. This includes reviewing the mission, mission requirements, and evaluating updated status information. In this task, the commander presents his battlespace area evaluation (CBAE). Planners analyze higher-level guidance, identify enemy centers of gravity, review assessments of the situation, and prepare a proposed mission statement. Area of Interest (AI) is determined from terrain analysis and an analysis of friendly and threat capabilities and limitations, and should be examined in accordance with the guidance provided by the commander in his CBAE. Commander's Critical Information Requirement (CCIRs) are developed. The unit mission statement, Commander's intent, and initial planning guidance are developed and issued to facilitate development of the proposed course(s) of action.

(JP 0-2, 2-0, 3-0, 3-53, 3-55, 3-56, 5-0, 5-00.2, MCWP 5-1, NDP 5, 6, NWP 5-01)

M1	Minutes	To complete assessment of latest information (cycle time).
M2	Percent	Of available reports reviewed.
M3	Time	After the request or occurrence, force reviews or develops flexible deterrent options.
M4	Hours	In advance of execution, decision is made to change plan.
M5	Percent	Of enemy actions or operations (which affected the course of the campaign) not forecast.
M6	Percent	Of time, a political event of interest occurs without options being available.
M7	Percent	Of time, Commander/senior staff member made aware by source outside the staff of an emerging political event which could impact the theater.
M8	Hours	Since last update of Force situation.
M9	Percent	Of incoming pieces of information (which could affect outcome of operation) do not get to person needing it.

MCT 5.2.2.1.1 Develop Commander's Battlespace Area Evaluation (CBAE)

The commander's CBAE is the commander's personal vision based on his understanding of the mission, the battlespace, and the enemy. The commander uses this evaluation to develop, assess, and communicate knowledge to the staff, which supports the planning and decisionmaking processes. The CBAE may be as simple as the commander's initial thoughts or it may be as complex as the product of his detailed analysis. CBAE identifies the battlespace, centers of gravity, commander's intent, and commander's critical information requirements. **(JP 1, 2-0, 3-0, MCDP 1-0, MCWP 3-40.2, 5-1)**

M1	Yes/No	CBAE developed and used throughout the planning phase.
M2	Yes/No	Enemy Centers of Gravity included in the CBAE.

MCT 5.2.2.1.2 Review, Request Changes to, Provide Rules of Engagement (ROE)

To review, request changes to and provide rules of engagement (ROE), or directives issued by competent military authority, that will delineate the circumstances and limitations under which U.S. Forces will initiate and/or continue combat engagement with other forces encountered. **(JP 1, 2-0, 3-0, MCDP 1-0)**

M1	Yes/No	ROE provided?
M2	Number	ROE changes requested.
M3	Hours	From request for changes to ROE until approval/denial.
M4	Incidents	Of misunderstood ROE.
M5	TBD	

MCT 5.2.2.1.3 Develop Commander's Planning Guidance

The commander's planning guidance focuses the staff during COA development. It should be specific enough to assist the planning effort, but not so specific as to inhibit COA development. This guidance may be expressed in terms of warfighting functions, types of operations, forms of maneuver, etc. The commander's guidance provides preliminary decisions required to focus planners on the commander's conceptual vision of the operation. The commander develops this guidance using the commander's battlespace area evaluation (CBAE), experience, and information on the mission from higher headquarters. The commander's initial planning

guidance provides the staff and subordinate commanders additional insight on how he views the mission, the tasks to be accomplished, and the resources required to achieve the desired end state. From this guidance, the FSC begins to frame fire support's role in the plan. **(JP 3-0, 5-0, 5-00.2, MCWP 3-16, 5-1, FMFM 3-1, NDP 5, 6, NWP 5-01)**

M1	Hours	After being notified of his tasks, the joint force commander issued or approved Initial Planning Guidance.
M2	Hours	In advance of execution, guidance issued to subordinate units.
M3	Time	Development of Commander's Planning Guidance.
M4	TBD	

MCT 5.2.2.1.4 Issue Warning Order

To issue a warning order (WO) for deployment and employment of expeditionary forces to a foreign setting and to establish their visible, credible presence offshore to accomplish national objectives or deter further crisis. A warning order should include the approved mission statement (to include the commander's intent), the commander's guidance and any other information that will assist subordinate units with their planning (e.g., changes in task organization, earliest time of movement). When military presence has not achieved friendly intentions, the actual employment of forces may be required to achieve military objectives and political goals. Employment is the use of Marine Corps forces to conduct operations to achieve the objectives of the joint force commander. This employment is comprised of the operational use of Marine Corps forces by the Marine Corps component commander or functional component commander and the tactical use of the MAGTF within the AO to attain military objectives. Employment includes both combat operations as well as MOOTW. **(JP 1, 2-0, 3-0, MCDP 1-0, MCWP 5-1)**

M1	Yes/No	Warning Order issued?
M2	Time	Receipt of mission to Warning Order issuance.
M3	TBD	

MCT 5.2.2.2 Develop Course of Action (COA)

Using the commander's planning guidance, as well as, updated IPB products, the relative combat power assessment, and COG analysis, planners begin developing possible ways the force can accomplish the mission. This requires creativity, imagination, and unbiased and open-minded participants. The number and detail of the COAs to be developed is dependent on the time available for planning. The planners do not judge or eliminate potential COAs: all possibilities are recorded for potential use. Using METT-T and an array of employment possibilities, planners design a broad plan of how they intend to accomplish the mission. "How" they intend to accomplish the mission becomes the COA. Development of COAs with sufficient variety to provide the commander a range of employment options is critical. **(JP 3-0, 5-0, 5-00.2, MCWP 5-1, FMFM 3-1, NDP 5, 6, NWP 5-01)**

M1	Percent	Of available planning time allotted for subordinate planning.
M2	Percent	Of non-selected COAs, considered for deception.
M3	Percent	Of COAs presented to Commander, not suitable, feasible, or acceptable.
M4	Days	In advance of execution, COAs developed.
M5	Number	Courses of action (COAs) developed.
M6	Number	Alternative COAs developed.

MCT 5.2.2.2.1 Conduct Relative Combat Power Analysis (RCPA)

To conduct relative combat power analysis (RCPA), which provides planners with an understanding of friendly and threat force strengths and weaknesses relative to each other. The goal of RCPA is to identify threat weaknesses that can be exploited through asymmetric application of friendly strengths and identify friendly weaknesses that require protection from threat actions. Combat power is the total means of destructive and/or disruptive force which a military unit/formation can apply against the opponent at a given time. Fire support in maneuver warfare produces combat power and is applied through combined arms. Combat power consists of tangible factors such as the destructive effect of available firepower, and intangible factors such as surprise, tempo, and morale. **(JP 1, 2-0, 3-0, 5-0, MCWP 3-16, 5-1)**

M1	Yes/No	Conduct RCPA.
M2	TBD	

MCT 5.2.2.2.2 Develop/Refine Staff Estimates

To develop and refine estimates of COA supportability conducted by the commander's staff and subordinate commands. Estimates are used for comparison and decision. The role of the staff is to assist the commander in accomplishing the mission in accordance with his intent. The staff accomplishes this through gathering and presenting information, preparing, updating and maintaining staff estimates to the commander to make decisions, and providing oversight of their respective functions to ensure execution of those decisions. Staff estimates used during the planning phase of an operation and are presented as an integral part of the MCPP. **(JP 1-0, MCWP 3-40.1, 5-1)**

M1	Yes/No	Development of staff estimates.
M2	TBD	

MCT 5.2.2.2.3 Develop Commander's Wargaming Guidance

To develop the commander's wargaming guidance which may include a list of friendly courses of action to be wargamed against specific threat courses of action: (e.g., COA against the enemy's most likely, most dangerous, or most advantageous COA); the timeline for the phase or state of the operation; a list of critical events (e.g., shifting the main effort); and level of detail (e.g., two levels down). Wargaming is a technique that aids COA analysis. It can be done formally, a disciplined, interactive mechanism that examines the execution of friendly COAs in relation to threat reaction, or informally, such as "what if" conversation between commander and selected staff officers. Wargaming relies heavily on tactical judgment and experience. It offers a common vision of operations to test plans against the array of possible enemy and friendly actions. **(MCWP 3-16, 5-1)**

M1	Yes/No	Conducted wargaming.
M2	Yes/No	Full participation from subordinate units.
M3	Yes/No	Full participation from adjacent/supporting units.
M4	TBD	

MCT 5.2.2.3 Wargame COAs

Course of action (COA) wargaming allows the staff and subordinate commanders to gain a common understanding of friendly -- and possible enemy -- COAs. This common understanding allows them to determine the advantages and disadvantages of each COA and forms the basis for the commander's COA comparison and decision. COA wargaming involves a detailed assessment of each COA as it pertains to the enemy and the battlespace. Each friendly COA is wargamed against selected threat COAs. COA wargaming assists the planners in identifying strengths and weaknesses, associated risks, and asset shortfalls for each friendly COA. COA wargaming may identify branches and potential sequels that require additional planning. Short of actually executing the COA, COA wargaming provides the most reliable basis for understanding and improving each COA. **(JP 3-0, 5-0, 5-00.2, MCWP 5-1, FMFM 3-1, NDP 5, 6, NWP 5-01)**

M1	Percent	Of branches and sequels that occurred, were not identified in COAs.
M2	Percent	Of decision points had no developed branches or sequels.
M3	Y/N	Staff "wargamed" COAs against potential enemy COAs.
M4	Incidents	Of limitations, (ultimately identified during execution) were not identified during analysis.
M5	Incidents	Of capabilities (ultimately required) not previously identified.

MCT 5.2.2.3.1 Develop Synchronization Matrix

To develop a planning support tool designed to integrate the efforts of the force across the warfighting functions and to record the results of the COA wargame. It depicts, over time, the diverse actions of the entire force that are necessary to execute the COA. When completed, it provides the basis for a matrix or checklist. **(MCWP 5-1)**

M1	Yes/No	Develop synchronization matrix.
M2	TBD	

MCT 5.2.2.4 Conduct COA Comparison and Decision

To conduct COA comparison and decision, in which the commander evaluates all friendly courses of action against established criteria, evaluates them against each other, and selects the course of action that he believes will best accomplish the mission. The commander may also refine his mission statement (including his intent and essential tasks) and concept of operations, and identify any branches of the chosen course of action that needs further staff attention. **(MCWP 5-1)**

M1	Yes/No	Objective analysis applied to recommending selection of COAs.
M2	Yes/No	Selective COA reflects a Main Effort and economy of force.

MCT 5.2.2.5 Develop the Order

The orders development step in the Marine Corps Planning Process (MCP) communicates the commander's intent, guidance, and decisions in a clear, useful form that is easily understood by those who must execute the order. An order is a written or oral communication that directs actions and focuses a subordinate's activities toward accomplishing the mission. The order should only contain critical or new information not routine matters normally found in standing operating procedures. **(JP 3-0, 5-0, 5-00.2, MCWP 5-1, FMFM 3-1, NDP 5, 6, NWP 5-01)**

M1	Percent	Of standing plans complete.
M2	Percent	Of responses were preplanned.

M6	Percent	Of units receive complete orders on first transmission.
M7	Hours	To issue all plans and orders.
M8	Time	Prior to execution, all units receive orders.

MCT 5.2.2.5.1 Develop Base Plan

To develop the base plan to execute military operations. The MCP consists of six steps which provide the commander and his staff, at all levels, a means to organize their planning activities, to transmit plans to subordinates and subordinate commands, and to share a common understanding of the mission and commander's intent. The six steps are: mission analysis, course of action development, course of action wargame, course of action comparison and decision, orders development and transition. **(JP 5-0, MCWP 5-1)**

M1	Yes/No	Base Plan developed.
M2	Time	Required to develop base plan.

To conduct risk management (ORM), the process of identifying, assessing and controlling risks arising from operational factors and making decisions that balance risk costs with mission benefits. Risk is characterized by both the probability and severity of a potential loss that may result from hazards due to the presence of an enemy adversary, or some other hazardous condition. The basic principles that provide a framework for implementing the risk management process are integrating risk management into mission planning, preparation, and execution; and, Universal Naval Task List

making risk decisions at the appropriate level in the chain of command. To make an initial assessment of risk to the force. Tasks include identifying hazards most likely to result in a loss of combat power and factors that could cause the mission to fail. **(JP 3-0, 5-0, 5-00.2, MCWP 5-1, FMFM 3-1, ORM 1-0, NDP 5, NWP 5-01)**

The COC is the command's "nerve center" where information is fused to provide situational

awareness for the commander and his staff. To provide controls and procedures for tactical movement of forces in a way that permits a commander to move his force quickly, securely, and efficiently. To take into account the size of units and related time and space factors. To pass on multiple routes at a designated speed, organized in serial march units; establish jamming teams and liaison parties; and move tactical command post before main body to synchronize and coordinate movement, etc. Control is established to ensure the commander flexibility to deploy his force as necessary for tactical purposes. MCT 5.3.2.2 Establish/Conduct Combat Intelligence Center (CIC) Operations

The G-2/S-2 will establish combat intelligence center (CIC) operations at all echelons of the MAGTF down to the battalion level. Personnel assigned to the intelligence center will collect, process, integrate, analyze, evaluate, and interpret intelligence and continually update the enemy situation. This information will be rapidly provided to current and future operations. These centers will be collocated with the combat operations center (COC) whenever possible. (**MCWP 2-1, 2-21, 2-22, 3-40.1**)

Operations

To establish and conduct surveillance and reconnaissance center (SARC) operations. The SARC is the primary intelligence command and control node used to direct, coordinate, monitor, and supervise MAGTF intelligence collection conducted by organic, attached, and direct support assets. The SARC is located in proximity of the MAGTF COC and assigns collection tasks to various MAGTF assets: the force reconnaissance company, the sensor control and management platoon (SCAMP), the unmanned aerial vehicle (UAV) squadron, the radio battalion, CI detachments, HUMINT exploitation teams, as well as, the imagery interpretation platoon and the topographic platoon of the intelligence battalion production and analysis company. (MCWP 2-1, 2-2, 3-40.1)

MCT 5.3.2.5 Establish/Conduct Rear Area Operations Center (RAOC) Operations

The ACE commander is responsible for coordinating local security on airfields. Typically, the security mission is assigned to the MWSSs, with the MWSS commanding officer being assigned as the TSO for that respective airbase. The airbase TSO is responsible to the airbase commander for the coordination of security. Each airbase TSO should task organize a RAOC to direct and control RAS, and will effect coordination with other RAOCs as appropriate. In cases where two or more MWSSs may be collocated, the ACE or airbase commander should designate one MWSS as being responsible for establishing the RAOC and coordinating RAS. (JP 3-0, 5-0, 5-00.2, MCRP 3-41.1A, MCWP 3-41.1, NDP 6)

MCT 5.3.2.6 Establish/Conduct Fire Support Coordination Center (FSCC) Operations

The division commander establishes and operates a Fire Support Coordination Center (FSCC). The FSCC is established to coordinate tactical level fires, advise the Commander and the G-3 on fire matters, develop and implement fire support coordinating measures, maintain current status of fire support assets, conduct fire planning, and facilitate the operation of the Targeting Board, if

established. The FSCC is established and operational at the COC incorporating all required liaison officers and special staff sections. The FSCC advises the commander and G-3 on fire support operations, capabilities and limitations, and systems availability. The FSCC may recommend changes to the fire support organization for combat. A FSCC is established to control fires, maintain current status on the tactical situation and fire support coordination measures in effect and maintain lists of fires to be coordinated, the locations of artillery ashore, and naval surface fire support ships available. Establish reliable and uninterrupted communications with both subordinate elements and fire support agencies. Assume responsibility for the overall coordination of air, NSFS, and artillery. Coordinate the attack of targets in the priority established in the operations order or according to the commander's changes based on the tactical situation. **(JP-3-0, 3-09, MCWP 3-16, NDP 1, NWP 3-03 Series, 3-56.1, NTTP 3-02.2)**

MCT 5.3.2.6.1 Establish/Conduct Fire Direction Center (FDC) Operations

Fire direction centers (FDCs) exist at artillery regiments, battalions, and batteries and permit respective commanders to plan and control fires. Fire direction operations may be centralized or decentralized. At regiment and battalion levels, the FDC exercises tactical fire direction. The battery FDC provides technical fire direction by determining firing data and issuing the data to artillery sections through fire commands. Battery FDCs are also capable of tactical fire direction and would perform this function in cases, such as MEU(SOC) deployments, when the battery operates independently. **(MCWP 3-16.1, 3-16.3, 3-40.1)**

M1	Time	To establish operational FDC.
M2	Percent	Of required FDC personnel in theater.
M3	TBD	

MCT 5.3.2.6.2 Establish/Conduct Tactical Air Control Party (TACP) Operations

To establish and conduct tactical air control party (TACP) operations. Control and coordination of direct air support is achieved through tactical air control parties (TACPs) organic to GCE units, through the direct air support center (DASC), and through other MACCS agencies. TACPs provide coordination between GCE units and supporting aviation assets and exist at the infantry division, regiment, and battalion levels. **(MCWP 3-16, 3-40.1)**

M1	Time	To establish operational TACP.
M2	Number	TACPs established.
M3	TBD	

MCT 5.3.2.7 Establish/Conduct Tactical Air Command Center (TACC) Airborne Operations

The principal air command agency for the ACE is the Tactical Air Command Center (TACC). It provides the command post and capabilities necessary from which the ACE Commander and staff, plan, supervise, integrate, coordinate, direct and execute all current and future MAGTF airborne operations, including deep operations; the planning and execution of all air tasking orders (ATOs); and, the execution of the current Wing operation order (OPORD) or fragmentary order (FRAGO). The TACC is the senior Marine Air Command and Control System (MACCS) agency and integrates these functions with the MAGTF command element through linkage with the force fires coordination center (FFCC) and combat operations center (COC). The TACC provides functional interface for employment of MEF aviation in joint and multinational operations. It maintains the current status of air assets, conducts targeting, and facilitates the operation of the Air Tasking Cycle, which produces the ATO. **(JP 3-0, 5-0, 5-00.2, MCWP 3-2, 3-25.4, NDP 6)**

M7	Units	Change in combat boarding rate when shifting from Case 2 to Case 3.

MCT 5.3.2.7.1 Establish/Conduct Tactical Air Operations Center (TAOC) Operations

The TAOC is responsible for airspace control and management. It provides the ACE with real-time surveillance of assigned airspace; the capability to detect, identify, and control the interception of hostile aircraft and missiles; and direction, positive control, and navigational assistance for friendly aircraft. The TAOC collects and displays information from its own sensors, other Marine Corps sources, and external sources that can be used to enhance the ability of the TACC to prosecute the ACE's support of deep operations. The sector anti-air warfare coordinator (SAAWC) is the MAGTF's air defense battle manager. The SAAWC coordinates and manages all active defense weapons within an assigned sector. The SAAWC is an extension of the TAOC, not a separate agency in and of itself. The SAAWC plans air defense operations, manages air defense resources, supervises the employment of air defense assets, and coordinates with higher and adjacent air agencies and activities. The fundamental difference between TAOC and SAAWC responsibilities lies in their focus: execution versus planning and coordination. **(JP 3-0, 5-0, 5-00.2, MCWP 3-2, 3-25.7, NDP 6)**

M1	Number	Incidents where proper coordination of movement was not adequate.

MCT 5.3.2.7.2 Establish/Conduct Direct Air Support Center (DASC) Airborne Operations

The Marine air control group (MACG) is responsible for providing, staffing, operating, and maintaining the direct air support center (airborne) (DASC[A]). The DASC is the principal MACCS air control agency ashore and is responsible for the direction of air operations directly supporting ground forces. It processes and coordinates requests for immediate air support and coordinates air missions requiring integration with ground forces and supporting arms. The DASC receives the air tasking order (ATO) from the TACC (Marine or Navy), and coordinates preplanned direct air support. When delegated authority by the aviation combat element (ACE) Commander, and in coordination with the GCE's senior FSCC, the DASC adjusts preplanned schedules, diverts airborne assets, and launches aircraft as necessary. The DASC coordinates the execution of direct air support missions with other supporting arms through the appropriate FSCC and, as required, with the appropriate MACCS agencies, and receives and disseminates pertinent tactical information reported by aircraft performing direct air support missions. The DASC also: provides aircraft and air control agencies with advisory and threat information to assist in the safe conduct of flight; monitors, records, and displays information on direct air support missions; maintains friendly and enemy ground situation display necessary to coordinate direct air support operations; provides direct air support aircraft and other MACCS agencies with information concerning the friendly and enemy situation; and, refers unresolved conflicts in supporting arms to the senior FSCC's fire support coordinator (FSC). **(JP 3-0, 5-0, 5-00.2, MCWP 3-2, 3-25.5, NDP 6)**

M1	Number	Incidents where proper coordination of movement was not adequate.

MCT 5.3.2.8 Establish/Conduct Combat Service Support Operations Center (CSSOC) Operations

Establish a structure for command and control of subordinate forces, maintain liaison with elements of the force, and integrate augmented personnel. Maintain up-to-date friendly and enemy status maps, overlays, charts, etc., required by the unit SOP. Internal arrangement of the CSSOC allows for the integration of operation, intelligence, and combat service support. Manage information within the CSSOC to ensure that the required action is taken in a timely, coordinated, and thorough manner and that an audit trail is maintained. Demonstrate the ability to use other communication paths or means to pass critical message traffic when the primary path or means fails. SOP contains provisions for the emergency destruction of classified material. **(JP 3-0, 5-0, 5-00.2, MCWP 4-1, NDP 6)**

M1	Days	To deploy forward and establish in theater a task force headquarters element.
M2	Hours	After arrival in operational area, to establish communication links up, down, across.
M3	Days	After arrival at deployed site, task force headquarters established communications with host-nation, US DOS representatives and non-governmental agencies.
M4	Days	To establish a liaison structure.

MCT 5.3.2.9 Establish/Conduct Movement Control Center (MCC) Operations

The maneuver and movement of forces on a battlefield is accomplished in combination with fire and/or time to achieve a position of advantage over the enemy to accomplish the mission. The ground combat element (CGE) Commander selects the most decisive form of movement maneuver to achieve his purpose within the MAGTF Commander's plan. From organic assets the MAGTF will task organize a unit movement control center (MCC) to monitor and coordinate movement preparations for the MAGTF. The MCC coordinates sourcing of personnel and equipment, and identifies shortfalls to the MAW Commander; coordinates organic transportation and the assets necessary for marshaling and staging of units; reports transportation and MHE shortfalls/excesses to the MAW; provides support to the MAGTF in meeting movement schedules (augmentation, embark personnel for pre-inspections, transport, MHE, etc); provides deployment readiness reports and supervises preparation of equipment, supplies, and personnel for deployment. The MCC requests transportation and MHE support required for marshaling and staging from the MAW, as required, and coordinates transportation and MHE support required for movement with the MAW. When the MAGTF is embarked aboard amphibious shipping, the MAGTF commander serves concurrently as the Commander, Landing Force (CLF). While embarked, the MAGTF commander and his staff direct the actions of the MAGTF from command and control facilities aboard the amphibious ships. MAGTF command and control may remain afloat throughout the expeditionary operation. Shipboard command and control facilities also support the commander, amphibious task force (CATF), who normally is located with his staff aboard the flagship.

This center, located aboard the amphibious flagship, consists of a supporting arms coordinator and naval gunfire, air support, and target information sections. ATF operations, intelligence and communications, and LF fire support personnel perform the functions of the SACC. This center provides the commanders of the ATF and the LF with information concerning the requirements and developments that affect coordination of fire delivery by naval gunfire units, support aircraft, and artillery units. Fire support requests received from the ATF or LF are coordinated from this center to ensure that all fires are integrated to achieve the maximum effect against targets. Current fire support information is continually updated and displayed while direction for the execution of restrictive fire plans and instructions concerning troop safety are promulgated. Surface fire support plans are prepared and their execution is supervised by the SACC staff. This center also coordinates air support operations with appropriate ATF and LF air control agencies. Records of targets in the objective area are maintained and appropriate fire support activities are monitored when responsibility for the coordination of fires is passed ashore to CLF. **(MCWP 3-40.1, FMFM 2-7 (MCWP 3-43.3))**

Each military operation has a civil dimension that requires

commanders to consider how the actions affect, and are affected by the presence of noncombatants. Careful planning, coordination, and execution of civil-military operations assists the MAGTF to achieve mission success by shaping the battlespace, enhancing freedom of action, isolating the enemy, meeting legal and moral obligations to civilians, and providing access to additional capabilities. CMO are applicable at the strategic, operational, and tactical levels. **(JP 1-02, 3-57, MCWP 3-33.1, 3-33.8, 3-40.4, 4-11.8)**

OPSEC gives the commander the capability to identify indicators than can be observed by adversary intelligence systems. These indicators could be interpreted or pieced together to derive critical information regarding friendly force dispositions, intent, and or COAs that must be protected. The goal of OPSEC is to identify, select, and execute measures that eliminate or reduce indications and other sources of information, which may be exploited by an adversary, to an acceptable level. To employ the five actions of OPSEC during planning and conducting campaigns and major operations, and to protect friendly forces and system capabilities from exploitation by an adversary. This task includes determining essential elements of friendly information (EEFI), identifying critical information from the EEFIs, conducting vulnerability analysis, selecting and implementing appropriate OPSEC measures, and finally monitoring OPSEC actions and comparing the results with desired results. **(JP 0-2, 1-0, 2-0, 3-0, 3-02.1, 3-02.2, 3-05, 3-07, 3-10, 3-53, 3-54, 6-0, MCWP 3-40.4, NDP 1, 6, NWP 3-13.1)**

MCT 6.1.1.3.2 Establish Threat Conditions (THREATCON)

To establish the terrorist threat level used in the determination of terrorist threat conditions (THREATCON). Factors that enter into the decision to assign a particular THREATCON and its associated measures include threat, target vulnerability, criticality of assets, security resource availability, impact on operations and morale, damage control, recovery procedures, international regulations, and planned U.S. Government actions that could trigger a terrorist response. The THREATCON system provides a common framework to facilitate inter-Service coordination, support of U.S. military antiterrorist (AT) activities, and enhancement of overall DOD implementation of U.S. Government AT policy. THREATCONs levels are described as follows: Normal (general threat, warranting routine security); Alpha (threat of terrorist activity against installation and personnel is general based on intelligence received, but measures are to be maintained); Bravo (increased, predictable threat exists requiring maintenance of measures for a certain period of time); Charlie (threat incident has occurred or intelligence indicates a terrorist act against US bases and personnel is imminent); and, Delta (applied in the immediate area where a terrorist attack has occurred or intelligence has received information that an action against a specific location is likely). **(JP 3-10.1, MCDP 1-0, MCRP 3-41.1A, MCWP 3-21.1, 3-41.1)**

MCT 6.1.1.3.3 Disseminate Air, Ground, Missile Attack Warnings

To disseminate air, ground, and missile attack warnings by using established warning alarms. The base commander establishes links with the air defense net and ground combat element for early warning of impending air or ground missile attack. Air defense warnings are normally issued by the area air defense commander (AADC), and are categorized as: red (hostile attack imminent); yellow (probable attack); or white (improbable attack). Air defense assets will initiate engagements sequences to counter aircraft and missiles threats in accordance with established air defense control measures, ROE and specific directives issued by the AADC. MCT 6.1.1.3.5 Conduct Defense in Depth

To conduct defense in depth to overwhelm the adversary and cripple capabilities and will to resist throughout the AOR and/or JOA from multiple dimensions, contributing to the adversary's speedy defeat or capitulation. Defense in depth includes establishing strong defense positions along the perimeter, as well as, incorporating plans for fire control and active foot and motor patrols inside and outside the perimeter. Military police assist the defensive effort in each of these areas. Interdiction is one manner in which JFCs use depth to conduct operations. Operations extended in depth, in time and space (geographically), shape future conditions and can disrupt an adversary's decision cycle. Depth contributes to protection of the force by destroying adversary potential before its capabilities can be realized and employed. (**JP 3-0, MCRP 3-11.1A, 3-16A, 3-16C, MCWP 2-6, 3-1, 3-2, 3-11, 3-11.1, 3-12, 3-13, 3-14, 3-15.1, 3-16, 3-17, 3-22, 3-25, 3-25.6, 3-34.1, 3-40.5, 3-41.1**)

MCT 6.1.1.3.5.1 Conduct Patrolling

Patrolling is necessary to provide additional security and are either reconnaissance or combat, mounted or dismounted. A patrol is tasked to collect information, confirm or deny accuracy of previously gained information, provide security, and harass, destroy, or capture the enemy. Patrols can also fix the enemy in place by fire and movement until other forces arrive or supporting fires can destroy them. Mounted patrols are used where the unit has a larger sector to cover and few personnel to patrol, and can be used to cover gaps between units in the defense, provide flank security and coordination, patrol forward of the base perimeter to provide early warning, and assist in reconnaissance when a large sector must be covered in a short time. Dismounted patrols may be a fire team, squad, platoon or company and must be able to interact with local inhabitants but still be ready to conduct combat operations. **(JP 1, 3-0 Series, 3-10, 3-10.1, MCRP 3-11.1A, MCWP 3-1, 3-11.1, 3-11.2, 3-11.3, 3-12, 3-13, 3-14, 3-34.1, NDP 1, 4, NWP 3 Series, 3-10, 3-10.3)**

MCT 6.1.1.3.5.2 Establish Observation and Listening Post

To establish observation and listening posts as a work priority in base defense operations and establishment of a base communication net, to observe all avenues of approach, and to dominate surrounding buildings and grounds. Effective base operations security measures such as staffing guard posts and observation towers at irregular intervals discourage terrorist activity. **(JP 3-0, 3-10.1, MCRP 3-11.1A, MCWP 3-1, 3-11.1, 3-11.2)**

M3	TBD	

MCT 6.1.1.4 Conduct Security Operations in Support of Maneuver

The security force gives the commander the time and space to counteract an enemy threat, and executes its mission to the greatest depth possible based on its capabilities and the tactical situation. From a multinational perspective, security operations (SO) in support of maneuver rely on base defense plans that integrate the special capabilities for maneuver, fire support, C2, intelligence, air and missile defense, mobility and survivability, and combat service support of the units and activities of each nation represented. As part of the base defense plan and maneuver operations, description of the organization of the ground defense force, the assignment

of elements to the security area to the primary, alternate, and supplementary defense portions, and the base rear area, and description of the counterattacks and work priorities are necessary. Military police support maneuver, mobility, and survivability by expediting forward, lateral, and rear movement of combat, combat support, and combat service support resources and by conducting security missions. **(JP 3-10.1, MCDP 1-0, MCWP 3-1, 3-12, 3-34.1, 3-41.1, 4-11.8)**

MCT 6.1.1.4.2 Conduct Guard Operations

To conduct guard operations such as patrolling, establishing guard posts and observation towers, conducting vehicle and personnel searches and identification checks, and physical measures designed to safeguard personnel; to prevent unauthorized access to equipment, installations, material, and documents; and to safeguard them against espionage, sabotage, damage, and theft. Guarding operations protects the main force from attack, direct fire, and ground observation by fighting to gain time, while also observing and reporting information. Guarding tasks include: providing early warning of enemy approach; providing maneuver space to the front, flanks or rear of the force; screens, attacks, defends or delays, within its capabilities. **(JP 1-02, JP 3-0, MCDP 1-0, MCWP 3-1, 3-2, 3-12, 3-13, 3-34.1)**

MCT 6.1.1.5 Conduct Convoy Security

To provide security directly to a convoy when insufficient friendly forces are available to continuously secure LOCs in an AO. Convoy security is offensive in nature and orients on the force being protected to the front, flanks, and rear of a convoy element moving along a designated route. Convoys are task-organized to meet the requirements of the assigned mission. A transport element, an escort or security element, various support elements, and a command and control element are generally included. The tactical situation, enemy capabilities, as well as, other planned options should be assessed in developing the convoy task organization. The results of reconnaissance and liaison dictate the requirements for security and support elements. In some instances, the need for engineer support may necessitate separate tasking of engineer units to perform route maintenance prior to or in conjunction with convoy movement. MCT 6.1.1.7 Conduct Anti-air Warfare (AAW) (Air Defense)

Anti-air Warfare (AAW) refers to the actions undertaken to destroy, or reduce to an acceptable level, the enemy air and missile threat. Anti-air warfare's primary purpose is to gain and maintain a degree of air superiority that allows the MEF to conduct aviation and ground operations without prohibitive interference from enemy aircraft and missiles. AAW also refers to the methods taken to minimize the effects of hostile air action, such as cover, concealment, dispersion, deception, and mobility. **(JP 1, 3-0, 3-01.2, 3-04, 3-56.1, MCDP 1-0, MCWP 3-2, 3-22, 3-25, 3-25.3, 3-25.4, 3-25.6, NDP 1, NWP 1.01, 3-01.10, 3-01.12, 3-22.5 Series, 3-56, NAVY WIDE AIR WARFARE PLAN)**

MCT 6.1.1.9 Provide Reaction Forces

The response force, or reaction force, is a mobile force designated, usually by the area commander, to deal with Level II threats. Response force commanders may be put under the tactical control of commanders of threatened bases. Planning and rehearsing response force operations within the AO ensure effective reaction. **(JP 3-10.1, MCRP 3-33A, MCWP 3-11.3, 3-11.4, 3-12, 3-13, 3-14, 3-16.1)**

MCT 6.1.1.9.1 Respond to Level I Threats

To respond to Level I threats, which are those threats that can be defeated by local defense. Level I threats can be defeated by base or base cluster self-defense measures. Available base assets should be able to detect and defeat enemy activities. Day-to-day security activities are conducted by the forces assigned to the base, usually as tasks in addition to their primary duties. At Level I, base defense forces must be trained and exercised to permit smooth transitions to Level II and Level III threats. **(JP 3-10.1, MCDP 1-0, MCRP 3-41.1A, MCWP 3-21.1, 3-41.1)**

M1	Number	Of incidents of enemy or insurgent observation or attempted penetration of the installation.

MCT 6.1.1.9.2 Respond to Level II Threats

To respond to Level II threats, which are those threats beyond the capabilities of local defense, but which can be defeated by reaction forces. Local defenses must be able to contain Level II threats until the arrival of reaction forces. Level II threats are beyond base or base cluster self-defense capabilities but can be defeated by response forces, or military police (MP) units assigned to area commands with supporting fires. After transition from a Level I threat posture, base defense forces must be able to disrupt or delay hostile action until response forces or Tactical Combat Force can be committed. **(JP 3-10.1, MCDP 1-0, MCRP 3-41.1A, MCWP 3-21.1, 3-41.1)**

M1	Number	Of incidents of enemy observation or actions against the installation.

MCT 6.1.1.9.2.1 Establish, Organize, and Train Provisional Security Forces

To establish, organize and train provisional security forces proportionate to the threat. A MEF RASC may be able to organize two types of provisional security forces (PSF): the provisional mobile security platoons (PMSPs) and the provisional helicopterborne security company (PHSC). MAGTFs smaller than MEF will need to establish security response units proportional to their task organization's capabilities. Based on the mission and threat assessment, these units can be used to supplement local defense efforts and to give assistance to the military police in the performance of their RAS missions. (MCRP 3-41.1A, MCWP 3-21.1, 3-41.1)

M1	Yes/No	PSF Plan developed.
M2	Percent	Of force assigned to PSF.
M3	TBD	

MCT 6.1.1.9.3 Respond to Level III Threats

To respond to Level III Threats which are those threats which require the MAGTF commander to employ units of the GCE to defeat them. Level III threats necessitate the command decision to commit a TCF. Level III threats, in addition to major ground attacks, include major attacks by aircraft and theater missiles armed with conventional weapons or NBC weapons. (JP 3-10.1, MCDP 1-0, MCRP 3-41.1A, MCWP 3-21.1, 3-41.1)

To provide and support the Tactical Combat Force (TCF). The TCF is a combat unit, with appropriate combat support and combat service support assets, which is assigned the mission of defeating Level III threats. The threat requiring the commitment of a TCF is usually of such magnitude that several bases or base clusters are threatened. Plans for the employment of the TCF should be coordinated with component commanders, area commanders, base cluster commanders, base commanders and with the HN. (JP 3-10.1, MCDP 1-0, MCRP 3-33A, MCWP 3-12, 3-41.1)

M1	Yes/No	TCF SOP developed.
M2	Percent	Of force assigned to TCF.
M3	TBD	

MCT 6.1.1.10 Conduct Military Police Operations

To conduct military police and area security operations to reduce the probability or to minimize the effects of enemy attacks in the AO. Military Police (MP) conduct area security operations to augment or reinforce units and to protect critical functions and facilities. These MP area security activities may be performed as specific assignments or conducted concurrently with other warfighting capabilities. An evolving criminal threat will have an adverse effect on military operations and require commanders to take actions that will reduce the negative impacts on forces, resources, and operations. Military police enforce laws and appropriate directives of the commander, and maintain liaison and coordinate with other DOD police organizations, host nation military and civilian authorities, and multinational police organizations. A coordinated law enforcement effort removes the conditions and opportunities that promote crime, thereby maintaining military discipline and preventing diversion of military resources. (MCWP 3-33.2, 3-33.8, 3-34.1)

M1	Percent	Of forces requiring security in the AO.
M2	Percent	Of operating area requiring MP security support in the AO.
M3	Percent	Of required MP force operational in theater.
M4	TBD	

MCT 6.1.1.10.1 Conduct Law Enforcement, Criminal Investigation, and U.S. Prisoner Confinement

To conduct law enforcement operations that aid in force protection through the prevention, detection, response, and investigation of a crime. Military police collect, process, evacuate, safeguard and establish internment camps for enemy prisoners of war (POW) and civilian internees (CIs), under the provisions of the Geneva Convention, providing proper and human treatment. To conduct enforcement of military law and order, and collect and evacuate enemy prisoners of war (POWs) and civilian detainees. This task includes: collection, processing, evacuating, safeguarding, and transferring enemy prisoners of war, refugees, and civilian internees. Military police assist the MAGTF commander in the development of plans, policies, and procedures of enforcing laws and regulations, and maintaining the discipline of units and personnel. (JP 3-0, MCWP 2-6, 3-1, 3-33.1, 3-33.2, 3-33.4, 3-33.8, 3-34.1)

MCT 6.1.1.10.3 Provide Base/Airfield Security Operations

To provide base airfield security operations and conduct measures, both normal and emergency, to nullify and reduce the effectiveness of enemy ground attack directed against air bases and installations. Military aircraft and their supporting facilities are prime enemy targets. Military Police complement the ACE security efforts by functioning as a response or augmentation force or as reinforcement for the airfield security force, providing physical security support and defense in depth. Each ACE airfield has several tenant units from which it can draw for defense of the airfield, as the composition of each airfield can vary extensively due to task organization and mission assignment. Local standing operating procedures (SOPs) and directives govern the size, assets, and methods of employment for ACE provisional security forces. **(MCRP 3-33A, 3-34.1, MCWP 3-17, 3-21.1, 3-34.1, 3-41.1)**

MCT 6.1.1.10.4 Provide MP Response Force for the Conduct of Airbase Ground Defense (ABGD)

The Military Police department of the ACE's MWSS provides area security to include security for flight line, ammunition, fuel storage, and air traffic control facilities. A MP response force is established to conduct airbase ground defense (ABGD). Tasks include conducting surveillance and route reconnaissance and providing straggler/POW/refugee control. M1	Percent	Of area requiring checkpoints.
M2	Percent	Of force devoted to traffic control and accident investigation.
M3	TBD	

MCT 6.1.1.10.6 Provide Main Supply Routes/Lines of Communications (MSR/LOC) Security

The primary mission of rear area security (RAS) for military police is to provide security for main supply routes/lines of communications (MSRs/LOCs). MP continuously move throughout the MAGTF rear area conducting foot and motor patrols to ensure the safe passage of personnel and supplies. MPs can conduct hasty reconnaissance, seek new or alternate routes, and serve as an important intelligence gathering source. Provisional security forces provide additional sources for MSR/LOC security and can be attached to the MP or remain under the operational control of the RAOC. To destroy or remove obstacles or hazardous items such as UXO, mines, rubble, debris or tactical obstacles as necessary to conduct operations. Clear only those routes and areas necessary for combat support and combat service support forces. **(MCRP 3-41.1A, MCWP 3-34.1)**

M9	Hours	Required to clear an obstacle/obstruction from LOC.

MCT 6.1.2 Conduct Passive Security

To conduct passive rear area or air defense security measures taken to minimize the effectiveness of hostile air/ground missile threats against friendly forces and assets. These measures include camouflage, dispersion, and natural cover, hardening installations, concealment, deception, dispersion, reconstitution, redundancy, detection and warning systems, and the use of protective construction. **(JP 3-0, MCRP 3-33A, 3-41.1A, MCWP 3-1, 3-21.1)**

MCT 6.1.2.1 Use/Employ Camouflage, Dispersion, and Natural Cover

To employ OPSEC measures to degrade the enemy's ability to target US and HN or multinational forces and facilities, reduce vulnerability to attack, and provide for reconstitution and recovery of forces. Measures include signature reduction such as camouflage, commonality

of vehicle appearance, cover and concealment. Dispersion reduces target vulnerability by increasing the distance between friendly assets. However, dispersion will also increase the difficulty of defending from a ground attack and frequently will reduce the efficiency of base operations. **(JP 3-10, MCWP 2-6, 3-33.8, 3-40.4)**

To conduct passive air defense operations used to degrade the enemy's ability to target U.S. and HN forces and facilities and reduce vulnerability to attack. Air defense warning is a trigger event for passive air defense measures by non-air-defense assets. Air defense assets will initiate engagements sequences to counter aircraft and missiles threats in accordance with established air defense control measures, ROE and specific directives issued by the AADC. Measures of passive air defense include camouflage, concealment, deception, dispersion, reconstitution, redundancy and the use of protective construction. **(JP 3-0, 3-10.1, MCRP 3-25F, MCWP 3-2, 3-22, 3-36)**

MCT 6.1.2.4 Conduct Deception Operations

To conduct deception operations by masking the real objectives of tactical operations and delaying effective enemy reaction. This is done by misleading the enemy about friendly intentions, capabilities, objectives, and the locations of vulnerable units and facilities. This task includes manipulating, distorting, or falsifying evidence available to the enemy to ensure security to real plans, operations, or activities, counter-targeting and physical and electronic (imitative, simulative, and manipulative) deception. This ensures higher headquarters that the deception plans are not undermined by integrating and coordinating these plans during the MEF's planning and execution processes. To request external support for deceptions from higher headquarters,

other forces, and national resources as required. To monitor and evaluate the effectiveness of military deceptions. To protect MEF forces and personnel from observation and surveillance. To locate and extract distressed personnel and sensitive equipment from enemy controlled area during wartime or contingency operations to prevent capture. TRAP is performed by an assigned and briefed aircrew and is a subcomponent of combat search and rescue (CSAR) and/or joint combat search and rescue (JCSAR) missions, but is only executed once the location of survivors is confirmed. A TRAP mission may include personnel to conduct the search portion of CSAR or the over water portion of search and rescue missions. The composition of a tactical recovery mission may vary from a single aircraft and aircrew to an assault support mission package that consists of multiple fixed-wing and rotary-wing aircraft with an onboard compliment of security, ground search, and medical personnel. (JP 1, 3-0, 3-50.2, MCWP 2-6, 3-2, 3-11.4, 3-24, 3-25.4, NDP 1, NWP 3-05)

Plans should be detailed, coordinated and concurrent for efficient execution and include the identification of bases most at risk, the advantages and disadvantages of evacuation, and the conduct of evacuation operations. Assault support involves the use of aircraft to provide tactical mobility and logistical support for MAGTF forces, the movement of high-priority cargo and personnel within the immediate area of operations, inflight refueling, and the evacuation of personnel and cargo, and is used to deploy forces, bypass obstacles or redeploy forces to meet the enemy threat. MCT 6.3.1 Prepare, Coordinate, and Rehearse Area Damage Control (ADC) Plans

To conduct area damage control (ADC) by preparing and coordinating plans of operations in order to quickly restore combat capability and prevent loss of momentum. ADC measures are taken before, during, or after hostile action or natural or manmade disasters to reduce the probability of damage and minimize its effects and are mostly concerned with restoring critical capabilities performed in critical facilities and installations (e.g., Headquarters and C2 nodes, runways, piers, and logistics dumps). Effective planning, coordination and rehearsing of specific

responsibilities, and use of all available assets to conduct ADC are necessary to ensure continuous support and immediate restoration of CSS operations. Preplanning and prestaging these activities, equipment and materials reduces recovery time but does not eliminate the requirement to assess each attack for the impact upon the MEF and to plan and implement continued recovery actions as required. **(JP 1-02, MCRP 3-41.1A, MCWP 3-34.1, 3-34.1, 4-11.8)**

MCT 6.3.2 Assess Damage and Provide Update to Rear Area Operations Center (RAOC)

To assess damage, isolate danger areas, and provide updates to the RAOC in assisting with consequence management operations. The RASC should coordinate with the HN, military police, engineer units, and the naval construction force to determine ADC capabilities and to ensure that all available ADC resources have been identified and employed. The ADC effort will be coordinated through the RAOC. **(JP 1-02, MCRP 3-41.1A, MCWP 3-17, 3-21.1, 3-41.1)**

Tasks include: decontamination and Explosive Ordnance Disposal (EOD) support to include employing specialized demolition as required to provide for munitions clearance, safety and restoration; coordination of activities to render safe, recover, evacuate, and dispose of, items of unexploded U.S. and foreign ordnance and non-

explosive devices; and, to disseminate technical information on enemy explosive ordnance materiel. To integrate CBRNE and NBC defense measures designed to detect, defeat, and minimize the effects of CBRNE or NBC attacks. Units occupying bases in the JRA must plan and train to perform their missions in a CBRNE or NBC environment, if necessary. MCT 6.4.1 Conduct CBRNE Operations

To plan operations or to operate in an area where an adversary has the capability of employing CBRNE weapons or toxic industrial materials (TIMs) may be encountered which produce effects similar to a CBRNE weapon. The force plans, trains and prepares to conduct mission operations while preventing the adversary from employing CBRNE weapons. If prevention fails, the force uses networked detection systems to locate the hazard, take necessary protective actions, and decontaminate as necessary. Activities such as post-hostility remediation, preparing equipment

for redeployment and final disposal in situ or removal of an adversary's residual CBRNE weapon capability are also included. (MCRP 3-37A, 3-37B, 3-37.1A, 3-37.1B, 3-37.1C, 3-37.2A, 3-37.2B, 3-37.2C, MCWP 3-37, 3-37.1, 3-37.2, 3-37.3, 3-37.4, 3-37.5, UJTL-CJCSM 3500.04C)

MCT 6.4.2 Conduct CBRNE Initial Incident Response Operations

The Chemical/Biological Incident Response Force (CBIRF) was established by direction of the Commandant of the Marine Corps as a result of Presidential Decision Directive 39 (PDD-39), to conduct operations managing the consequences of chemical, biological, radiological, nuclear or high-yield explosive (CBRNE) materials or weapons use by terrorists. The CBIRF unit has state-of-the-art monitoring and detection equipment for identifying, sampling and analyzing NBC hazards, including TIM. It is self-contained, self-sufficient and rapidly deployable providing force protection and/or mitigation in the event of a weapons of mass destruction (WMD) incidents. The CBIRF is prepared to no-notice WMD incidents with a rapidly deployable Initial Response Force (IRF) and a follow-on force if required. (MCRP 3-37A, 3-37B, 3-37.1A, 3-37.1B, 3-37.1C,

MCT 6.4.3 Conduct Chemical, Biological, Radiological, and Toxic Industrial Chemical Agent Detection, Identification, Monitoring, and Sampling Operations

To conduct detection, identification, monitoring and sampling operations of toxic industrial material (TIM), particularly toxic industrial chemical (TIC) and toxic industrial biological (TIB) material, and/or toxic industrial radiological (TIR) material. These chemicals could interfere significantly across the range of military operations. TIC is corrosive and can damage eyes, skin, respiratory tract, and equipment. Release of TIC is most dangerous at night because typical nighttime weather conditions produce high concentrations that remain close to the ground for extended distances. Once a TIC situation has occurred, detection efforts conducted by CBIRF to determine the extent and duration of residual hazards and decontamination and contamination containment actions need to be implemented. To obtain information by visual observation, or other detection methods, about the activities and resources of an enemy or about the meteorologic, hydrographic, or geographic characteristics of a particular area. To detect and identify NBC hazards including finding gaps and detours around NBC-contaminated areas. NBC reconnaissance, which provides the information for identifying NBC hazards, is part of the overall intelligence collection effort. (JP 1, 3-0, 3-02, 3-03, 3-01.4, 3-11, 3-13, 3-15, 3-51, MCRP 3-37A, 3-37B, 3-37.1A, 3-37.1B, 3-37.1C, 3-37.2A, 3-37.2B, 3-37.2C, MCWP 3-37, 3-37.1, 3-37.2, 3-37.3, 3-37.4, 3-37.5, FMFM 13, FM 3-11.4 (FM 3-4), NDP 1, 4, NWP 3 Series, NTPP 3-11 Series, AFTTP (I) 3-2.46)

M9	Percent	Of enemy NBC delivery systems were identified, targeted, and engaged/destroyed by friendly forces.
M10	Percent	Of friendly units employ NBC monitoring equipment.

MCT 6.4.4 Conduct CBRNE Reconnaissance and Decontamination Operations

Marine Corps unit capabilities are based on unit equipment and training in NBC detection, protection, reconnaissance and decontamination operations. Marine Corps units have organic NBC personnel and equipment within each organization, down to the battalion and squadron levels. The NBC personnel-intensive tasks (such as NBC reconnaissance operations) are performed by additional duty Marines from within the unit. The Marine Corps uses the same NBC defense equipment as other services. The NBC reconnaissance teams can detect and locate

most NBC hazards and provide unit commanders with information about where contamination may or may not be present. Collected surveys and data are forwarded to higher headquarters via communications nets (e.g., radio, digital nets, and the joint warning and reporting network). Decontamination tasks include absorbing, destroying, neutralizing, making harmless, or removing chemical or biological agents, or by removing radioactive material clinging to or around a person, object, or area. (JP 1, 3-0, 3-02, 3-03, 3-01.4, 3-11, 3-13, 3-15, 3-51, MCRP 3-37A, 3-37B, 3-37.1A, 3-37.1B, 3-37.1C, 3-37.2A, 3-37.2B, 3-37.2C, MCWP 3-37, 3-37.1, 3-37.2, 3-37.3, 3-37.4, 3-37.5, FMFM 13, FM 3-11.4 (FM 3-4), NDP 1, 4, NWP 3 Series, NTTP 3-11.27, AFTTP (I) 3-2.46)

M10	Percent	Of friendly units employ NBC monitoring equipment.

MCT 6.4.5 Conduct Enhanced NBC Operations

To conduct enhanced defensive and protective operations in an environment in which there is deliberate or accidental use of nuclear, biological or chemical (NBC) weapons or agents. Protective measures are taken to keep NBC hazards from having an adverse effect on personnel, equipment, or critical assets and facilities. To obtain information by visual observation, or other detection methods, about the activities and resources of an enemy or about the meteorological, hydrographic, or geographic characteristics of a particular area. To detect and identify NBC hazards including finding gaps and detours around NBC-contaminated areas. NBC reconnaissance, which provides the information for identifying NBC hazards, is part of the overall intelligence collection effort. To take measures to avoid or minimize NBC attacks and reduce the effects of NBC hazards. By taking measures to avoid the effects of NBC attacks, units can reduce their protective postures and decrease the likelihood and extent of decontamination required. (JP 1, 3-0, 3-02, 3-03, 3-01.4, 3-11, 3-13, 3-15, 3-51, MCRP 3-37A, 3-37B, 3-37.1A, 3-37.1B, 3-37.1C, 3-37.2A, 3-37.2B, 3-37.2C, MCWP 3-37, 3-37.1, 3-37.2, 3-37.3, 3-37.4, 3-37.5, FMFM 13, FM 3-11 (FM 3-100), NDP 1, 4, NWP 3 Series, NTTP 3-11 Series, AFTTP (I) 3-2.42)

APPENDIX A

JOINT CONDITIONS

APPENDIX A

JOINT CONDITIONS

1. Purpose. This enclosure is the reference for the physical, military, and civil conditions that can be used to describe the operational context for selected mission tasks.
2. Introduction. This list of conditions in this section is part of the JMETL development process. The process is initiated by a commander's mission analysis to identify specified and implied tasks that may be described using the definitions in the Glossary. Once the tasks are selected, the conditions in this section or those developed by the commander may be used. Conditions must affect the performance of the selected task; otherwise, they are not used.
3. Conditions. Conditions are used in the JMETL development process to express variables of the environment that affect task performance. Conditions are applied to specific tasks and not overall missions because conditions may affect tasks differently within the context of a mission. Conditions that are relevant affect performance of the task. If the condition does not affect how to train, organize, or equip to perform a task it is not relevant and should not be used. (For example, the political environment may limit the target sets that in turn affect the ordnance and delivery systems required. The terrain may limit the type of combat units that can operate in the designated area. A special operations force (SOF) operation requires special training.) Conditions help establish the training environment for joint training events, either academic or exercise.
4. Development of Conditions. The following guidelines that were used to develop the conditions in the UJTL should be used to develop proposed changes and additions to the conditions listed. These recommended changes should be forwarded to the U.S. Joint Forces Command (USJFCOM) for approval and insertion in the UJTL.
 - a. Conditions should be factors of the immediate environment. Conditions are aspects of the environment immediately surrounding the performance of a task.
 - b. Conditions should directly affect the performance of a task. A condition must directly affect the ease or difficulty of performing at least one task.
 - c. Conditions should not be a related task. Task performance may be constrained or enabled by the level of performance of a related task; however, related tasks are not treated as conditions because they do not directly affect performance of the specific task.
 - d. Each condition should have a unique, understandable name. Each condition should have a name that distinguishes it from every other condition and from every task.

e. Conditions may apply to all levels of war and all types of tasks. Some conditions may seem to apply to a particular level of war or a particular type of task (joint vs. Service), but they are, in fact, generic.

f. Conditions should be placed logically in the conditions list structure. Each condition should be placed under the physical environment (land, sea, air, and space), the military environment (mission, forces, command, control, communications, and computers (C4)-related, intelligence-related, movement-related, firepower-related, protection-related, sustainment-related, threat-related or conflict), or the civil environment (political, cultural, and economic).

g. Descriptors for each condition are divided into three or more distinct categories. Categories have been developed for each condition that distinguish among several levels at which the condition may be experienced and are based, whenever possible, on objective, quantitative criteria.

h. Conditions and descriptors should be written to be compatible with task/conditions/standards framework. Conditions are expressed within the framework of the phrase, “perform this task under conditions of...” Therefore, each condition and condition descriptor phrase should fit within this framework.

5. Organization of Conditions List. Conditions in this manual are organized (see Figure 3-1) into three broad categories: physical, military, and civil. Beneath each category, a number of related conditions are organized. For example, conditions that are organized under the physical environment include land, sea, air, and space. Each condition contained in this document is briefly defined and is assigned a unique reference code beginning with the letter “C.” In addition, for each condition, several descriptors are provided that allows a user to specify how the condition is likely to exist in a particular mission or scenario. For example, for the condition C 1.3.1, *Climate*, descriptors allow the user to specify whether the climate is tropical, temperate, arctic, or arid. If climate does not affect how an organization trains, organizes, or equips itself to perform a selected task the condition is not valid and is not part of the JMETL.

The following pages are a table of contents for conditions that are hyperlinked to each condition's location. Click on the page number of the condition you want to view instead of scrolling through many pages to get there. Turning on your web tool can also be useful when using the hyperlinks. You can find the web tool by going to the View menu, selecting Toolbars, and ensuring that Web is checked. Another easy way to navigate through this enclosure is by using the Online Layout on the View menu.

PART II – DEFINITIONS

The following terminology is from Joint Pub 1-02, NWP 1-02, or MCDP 1-0. Exceptions are noted.

acoustic warfare. Action involving the use of underwater acoustic energy to determine, exploit, reduce, or prevent hostile use of the underwater acoustic spectrum and actions which retain friendly use of the underwater acoustic spectrum. There are three divisions within acoustic warfare:

1. Acoustic warfare support measures. That aspect of acoustic warfare involving actions to search for, intercept, locate, record, and analyze radiated acoustic energy in water for purpose of exploiting such radiation. The use of acoustic warfare support measures involves no intentional underwater acoustic emission and is generally not detectable by the enemy.
2. Acoustic warfare countermeasures. That aspect of acoustic warfare involving actions taken to prevent or reduce an enemy's effective use of the underwater acoustic spectrum. Acoustic warfare countermeasures involve intentional underwater acoustic emissions for deception and jamming.
3. Acoustic warfare counter-countermeasures. That aspect of acoustic warfare involving actions taken to ensure friendly effective use of the underwater acoustic spectrum despite the enemy's use of underwater acoustic warfare. Acoustic warfare counter-countermeasures involve anti-acoustic warfare support measures and anti-acoustic warfare countermeasures, and may not involve underwater acoustic emissions.

administrative control. Direction or exercise of authority over subordinate or other organizations in respect to administration and support, including organization of Service forces, control of resources and equipment, personnel management, unit logistics, individual and unit training, readiness, mobilization, demobilization, discipline, and other matters not included in the operational missions of the subordinate or other organizations. Also called ADCON.

after-action review. A process designed to provide commanders direct feedback on the accomplishment of selected joint mission essential tasks, conditions, and standards stated in terms of training objectives in order for the commander to evaluate training proficiency. An analytical review of training events that enable the training audience, through a facilitated professional discussion, to examine actions and results during a training event. Also called AAR. (CJCSM 3500.03)

amphibious assault. The principal type of amphibious operation that involves establishing a force on a hostile or potentially hostile shore.

amphibious demonstration. A type of amphibious operation conducted for the purpose of deceiving the enemy by a show of force with the expectation of deluding the enemy into a course of action unfavorable to him.

amphibious force. An amphibious task force and a landing force together with other forces that are trained, organized, and equipped for amphibious operations. (JP 3-02)

amphibious raid. A type of amphibious operation involving swift incursion into or temporary occupation of an objective followed by a planned withdrawal.

amphibious task force. A Navy task organization formed to conduct amphibious operations. (JP 3-02)

amphibious withdrawal. A type of amphibious operation involving the extraction of forces by sea in naval ships or craft from a hostile or potentially hostile shore.

angle on the bow. The angle between the fore and aft axis of a target and the line of sight, measured from the target bow to starboard or port. Also called AOB.

area of influence. A geographical area wherein a commander is directly capable of influencing operations by maneuver or fire support systems normally under the commander's command or control. Also called AOI.

area of interest. That area of concern to the commander, including the area of influence, areas adjacent thereto, and extending into enemy territory to the objectives of current or planned operations. This area also includes areas occupied by enemy forces who could jeopardize the accomplishment of the mission. Also called AOI.

area of operations. An operational area defined by the joint force commander for land and naval forces. Areas of operation do not typically encompass the entire operational area of the joint force commander, but should be large enough for component commanders to accomplish their missions and protect their forces. Also called AO.

asymmetry. Unconventional, unexpected, innovative or disproportional means used to gain advantage over an adversary. (MCRP 5-12C)

attack. An offensive action characterized by movement supported by fire with the objective of defeating or destroying the enemy. (MCRP 5-12C)

aviation combat element. The core element of a Marine air-ground task force (MAGTF) that is task-organized to conduct aviation operations. The aviation combat element provides all or a portion of the six functions of Marine aviation necessary to accomplish the MAGTF's mission. These functions are anti-air warfare, offensive air support, assault support, electronic warfare, air reconnaissance, and control of aircraft and missiles. The aviation command element is usually composed of an aviation unit headquarters and various other aviation units or their detachments.

It can vary in size from a small aviation detachment of specifically required aircraft to one or more Marine aircraft wings. The aviation command element itself is not a formal command. Also called ACE.

avenue of approach. An air or ground route of an attacking force of a given size leading to its objective or to key terrain in its path. Also called AA.

axis of advance. A line of advance assigned for purposes of control; often a road or a group of roads, or a designated series of locations, extending in the direction of the enemy.

barrier. A coordinated series of obstacles designed or employed to channel, direct, restrict, delay, or stop the movement of an opposing force and to impose additional losses in personnel, time, and equipment on the opposing force. Barriers can exist naturally, be manmade, or a combination of both.

battalion landing team. In an amphibious operation, an infantry battalion normally reinforced by necessary combat and service elements; the basic unit for planning an assault landing. Also called BLT.

battle position. 1. In ground operations, a defensive location oriented on an enemy avenue of approach from which a unit may defend. 2. In air operations, an airspace coordination area containing firing points for attack helicopters. Also called BP. (MCRP 5-12C)

battlespace. 1. The environment, factors, and conditions that must be understood to successfully apply combat power, protect the force, or complete the mission. This includes the air, land, sea, space, and the included enemy and friendly forces; facilities; weather; terrain; the electromagnetic spectrum; and the information environment within the operational areas and areas of interest. (JP 1-02) 2. All aspects of air, surface, subsurface, land, space, and electromagnetic spectrum, which encompass the area of influence and area of interest. (MCRP 5-12C)

battlespace dominance. The degree of control over the dimensions of the battlespace which enhances friendly freedom of action and denies enemy freedom of action. It permits force sustainment and application of power projection to accomplish the full range of potential operational and tactical missions. It includes all actions conducted against enemy capabilities to influence future operations. (MCRP 5-12C)

boundary. A line that delineates surface areas for the purpose of facilitating coordination and deconfliction of operations between adjacent units, formations, or areas.

breach. The employment of any means available to break through or secure a passage through an obstacle. (MCRP 5-12C)

centers of gravity. Those characteristics, capabilities, or localities from which a military force derives its freedom of action, physical strength, or will to fight. Also called COGs.
