NASA STI Program ... in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA scientific and technical information (STI) program plays a key part in helping NASA maintain this important role.

The NASA STI program operates under the auspices of the Agency Chief Information Officer. It collects, organizes, provides for archiving, and disseminates NASA's STI. The NASA STI program provides access to the NASA Aeronautics and Space Database and its public interface, the NASA Technical Report Server, thus providing one of the largest collections of aeronautical and space science STI in the world. Results are published in both non-NASA channels and by NASA in the NASA STI Report Series, which includes the following report types:

- **TECHNICAL PUBLICATION.** Reports of completed research or a major significant phase of research that present the results of NASA Programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA counterpart of peer-reviewed formal professional papers but has less stringent limitations on manuscript length and extent of graphic presentations.
- **TECHNICAL MEMORANDUM.** Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- **CONTRACTOR REPORT.** Scientific and technical findings by NASA-sponsored contractors and grantees.

- **CONFERENCE PUBLICATION.** Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.
- **SPECIAL PUBLICATION.** Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.
- **TECHNICAL TRANSLATION.** English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services also include creating custom thesauri, building customized databases, and organizing and publishing research results.

For more information about the NASA STI program, see the following:

- Access the NASA STI program home page at <http://www.sti.nasa.gov>
- E-mail your question via the Internet to help@sti.nasa.gov
- Fax your question to the NASA STI Help Desk at (301) 621-0134
- Phone the NASA STI Help Desk at (301) 621-0390

Introduction

Several thousand inventions result each year from research supported by the National Aeronautics and Space Administration. NASA seeks patent protection on inventions to which it has title if the invention has important use in government programs or significant commercial potential. These inventions cover a broad range of technologies and include many that have useful and valuable commercial application.

NASA inventions best serve the interests of the United States when their benefits are available to the public. In many instances, the granting of nonexclusive or exclusive licenses for the practice of these inventions may assist in the accomplishment of this objective. This bibliography is published as a service to companies, firms, and individuals seeking new, licensable products for the commercial market.

The *NASA Patent Abstracts Bibliography* is an annual NASA publication containing comprehensive abstracts of NASA-owned inventions covered by U.S. patents. The citations included were originally published in NASA's *Scientific and Technical Aerospace Reports (STAR)*.

The citations published in this issue cover the period October 2006 through September 2007. The subjects covered include the *NASA Scope and Subject Category Guide's* 10 broad subject divisions separated further into 76 specific categories. However, not all categories contain citations during the date range of this issue; therefore, the Table of Contents does not include all divisions and categories. Each citation includes an abstract and, when available, a key illustration taken from the patent or application for patent. Also when available, citations include a link to the full-text document online.

[The Federal Depository Library Program](#)

The U.S. Congress established the Federal Depository Library Program (FDLP) to ensure access by the American public to U.S. Government information. The program acquires and disseminates information products from all 3 branches of the U.S. Government to over 1,200 Federal depository libraries nationwide. The libraries maintain these information products as part of their existing collections and are responsible for assuring that the public has free access to the information. Locate the Federal depository libraries at: <http://www.gpoaccess.gov/libraries.html>.

NASA PATENT ABSTRACTS BIBLIOGRAPHY

A Continuing Bibliography (Suppl. 68)

OCTOBER 2007

02 AERODYNAMICS

Includes aerodynamics of flight vehicles, test bodies, airframe components and combinations, wings, and control surfaces. Also includes aerodynamics of rotors, stators, fans, and other elements of turbomachinery. For related information see also 34 Fluid Mechanics and Thermodynamics.

20070016649 NASA Langley Research Center, Hampton, VA USA

Trailing Vortex Management via Boundary Layer Separation Control

Greenblatt, D., Inventor; May 19, 2005; 31 pp.; In English

Patent Info.: Filed 8 Jul. 2004; US-Patent-Appl-SN-10-890-842

Report No.(s): PB2007-100940; No Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070016649>

A method and device utilizes boundary layer separation control for the purpose of wake vortex alleviation. Trailing vortices are manipulated by varying the spanwise vortex-sheet strength via either passive or active boundary layer separation control. Boundary layer separation can be diminished or promoted to vary vortex properties, such as locations and strengths, so as to generate wake signatures that are unstable, resulting in complex three-dimensional interaction and rapid destruction of vortex coherence in the wake. Separation control can be achieved in either a time-dependent or a time-invariant mode.

AIR TRANSPORTATION AND SAFETY

Includes passenger and cargo air transport operations; airport ground operations; flight safety and hazards; and aircraft accidents. Systems and hardware specific to ground operations of aircraft and to airport construction are covered in 09 Research and Support Facilities (Air). Air traffic control is covered in 04 Aircraft Communications and Navigation. For related information see also 16 Space Transportation and Safety and 85 Technology Utilization and Surface Transportation.

Slotted Aircraft Wing

Vassberg, John C., Inventor; Gea, Lie-Mine, Inventor; McLean, James D., Inventor; Witowski, David P., Inventor; Krist, Steven E., Inventor; Campbell, Richard L., Inventor; May 23, 2006; 33 pp.; In English; Original contains black and white illustrations

Patent Info.: Filed 9 Oct. 2002; US-Patent-7,048,228; US-Patent-Appl-SN-678474; US-Patent-Appl-SN-417355;

NASA-Case-LAR-16517-1; No Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20060049149>

An aircraft wing includes a leading airfoil element and a trailing airfoil element. At least one slot is defined by the wing during at least one transonic condition of the wing. The slot may either extend spanwise along only a portion of the wingspan, or it may extend spanwise along the entire wingspan. In either case, the slot allows a portion of the air flowing along the lower surface of the leading airfoil element to split and flow over the upper surface of the trailing airfoil element so as to achieve a performance improvement in the transonic condition.

20070003564 NASA Langley Research Center, Hampton, VA, USA

Method for Correcting Control Surface Angle Measurements in Single Viewpoint Photogrammetry

Burner, Alpheus W., Inventor; Barrows, Danny A., Inventor; October 31, 2006; 8 pp.; In English; Original contains black and white illustrations

Patent Info.: Filed 20 Sep. 2005; US-Patent-7,130725; US-Patent-Appl-SN-239457; NASA-Case-LAR-17021-1; No Copyright; Avail: CASI; A02, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070003564>

A method of determining a corrected control surface angle for use in single viewpoint photogrammetry to correct control surface angle measurements affected by wing bending. First and second visual targets are spaced apart &om one another on a control surface of an aircraft wing. The targets are positioned at a semispan distance along the aircraft wing. A reference target separation distance is determined using single viewpoint photogrammetry for a 'wind off condition. An apparent target separation distance is then computed for 'wind on.' The difference between the reference and apparent target separation distances is minimized by recomputing the single viewpoint photogrammetric solution for incrementally changed values of target semispan distances. A final single viewpoint photogrammetric solution is then generated that uses the corrected semispan distance that produced the minimized difference between the reference and apparent target separation distances. The final single viewpoint photogrammetric solution set is used to determine the corrected control surface angle.

Airfoil Surface Impedance Modificaton for Noise Reduction in Turbofan Engines

Prasad, Dilip, Inventor; Morin, Bruce L., Inventor; Lord, Wesley K., Inventor; Mathews, Douglas C., Inventor; 23 Jun. 2005; 6 pp.; In English; Original contains black and white illustrations

Contract(s)/Grant(s): NAS3-98005

Patent Info.: Filed 22 Dec . 2003; US-Patent-Appl-10/744983; US 2005/0135924

Report No.(s): PB2007-103106; No Copyright; Avail: CASI; A02, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070025074>

In accordance with the present invention, an aircraft engine is provided with a component which helps reduce the noise generated by the engine. The component has a first aerodynamic surface, a second aerodynamic surface, and a system for reducing noise without altering a pressure differential between the first aerodynamic surface and the second aerodynamic surface.

Flight Control Actuation System

Wingett, Paul T., Inventor; Gaines, Louie T., Inventor; Evans, Paul S., Inventor; Kern, I., Inventor; 16 Jun. 2005; 16 pp.; In English; Original contains black and white illustrations

Contract(s)/Grant(s): NCC8-115

Patent Info.: Filed 22 Jun. 2004; US-Patent-Appl-10/874729; US 2005/0127241

Report No.(s): PB2007-102551; No Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070025472>

A flight control actuation system comprises a controller, electromechanical actuator and a pneumatic actuator. During normal operation, only the electromechanical actuator is needed to operate a flight control surface. When the electromechanical actuator load level exceeds 40 amps positive, the controller activates the pneumatic actuator to offset electromechanical actuator loads to assist the manipulation of flight control surfaces. The assistance from the pneumatic load assist actuator enables the use of an electromechanical actuator that is smaller in size and mass, requires less power, needs less

cooling processes, achieves high output forces and adapts to electrical current variations. The flight control actuation system is adapted for aircraft, spacecraft, missiles, and other flight vehicles, especially flight vehicles that are large in size and travel at high velocities.

Gears; Noise Reduction; Rotary Wing Aircraft; Transmissions (Machine Elements); Safety

AVIONICS AND AIRCRAFT INSTRUMENTATION

Includes all avionics systems, cockpit and cabin display devices, and flight instruments intended for use in aircraft. For related information see also 04 Aircraft Communications and Navigation; 08 Aircraft Stability and Control; 19 Spacecraft Instrumentation and Astrionics; and 35 Instrumentation and Photography.

20070017863 NASA Langley Research Center, Hampton, VA USA

Method and Apparatus for Loss of Control Inhibitor Systems

Harrah, Ralph C. A., Inventor; October 20, 2005; 8 pp.; In English

Patent Info.: Filed 27 Oct. 2004; US-Patent-Appl-SN-975119; US-Patent-Appl-SN-515215

Report No.(s): PB2007-105980; No Copyright; Avail: CASI; A02, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070017863>

Active and adaptive systems and methods to prevent loss of control incidents by providing tactile feedback to a vehicle operator are disclosed. According to the present invention, an operator gives a control input to an inceptor. An inceptor sensor measures an inceptor input value of the control input. The inceptor input is used as an input to a Steady-State Inceptor Input/Effector Output Model that models the vehicle control system design. A desired effector output from the inceptor input is generated from the model. The desired effector output is compared to an actual effector output to get a distortion metric. A feedback force is generated as a function of the distortion metric. The feedback force is used as an input to a feedback force generator which generates a loss of control inhibitor system (LOCIS) force back to the inceptor. The LOCIS force is felt by the operator through the inceptor.

Real Time Analysis and Display of Aircraft Approach Maneuvers

Lynch, Robert E., Inventor; Chidester, Thomas R., Inventor; Lawrence, Robert E., Inventor; 1 May 2007; 12 pp.; In English; Original contains black and white illustrations

Patent Info.: Filed 22 Feb. 2005; US-Patent-7,212,135; US-Patent-Appl-10/066649; US-Patent-Appl-10/956523;

NASA-Case-ARC-15356-3; No Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070023677>

Method and system for monitoring and comparing, in real time, performance of an aircraft during an approach to touchdown along a conventional approach path and along a contemplated modified approach path to touchdown. In a first procedure, a flight parameter value at a selected location is compared and displayed, for the planned path and for the modified path. In a second procedure, flight parameter values $FP(t_{sub\ m})$ at a sequence $\{t_{sub\ n}\}_n$, of measurement times is compared and displayed, for the planned path and for a contemplated or presently-executed modified path. If the flight parameter for the

planned path and for the modified path differ too much from each other, the pilot in command has an option of terminating the approach along the modified path.

Nonlinearly Stacked Low Noise Turbofan Stator

Schuster, W. B.; Kontos, K. B.; Weir, D. S.; Nolcheff, N. A.; Gunara, J. A.; 23 Jun 05; 14 pp.; In English

Contract(s)/Grant(s): NAS3-0036

Patent Info.: Filed 23 Jun 05; US-Patent-Appl-SN-11-166-668

Report No.(s): PB2007-101349; No Copyright; Avail: CASI; **A03**, Hardcopy

The present invention provides a nonlinearly stacked low noise turbofan stator vane. The stator is in an axial fan or compressor turbomachinery stage that is comprised of a collection of vanes whose highly three-dimensional shape is selected to reduce rotor-stator and rotor-strut interaction noise while maintaining the aerodynamic and mechanical performance of the vane. The nonlinearly stacked low noise turbofan stator vane reduces noise associated with the fan stage of turbomachinery to improve environmental compatibility. The stator vane has a characteristic curve that is characterized by a nonlinear sweep and a nonlinear lean.

Reduced Exhaust Emissions Gas Turbine Engine Combustor

Zupanc, Frank J., Inventor; Yankowich, Paul R., Inventor; 23 Jun. 2005; 10 pp.; In English

Contract(s)/Grant(s): NAS3-01136

Patent Info.: Filed 23 Dec. 2003; US-Patent-Appl-SN-10/746654; US 2005/0132716

Report No.(s): PB2007-102623; No Copyright; Avail: CASI; **A02**, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070028823>

A gas turbine engine combustor includes a plurality of main fuel injector assemblies, and a plurality of pilot fuel injector assemblies, that are arranged and configured to reduce exhaust gas emissions during engine operation. The plurality of main fuel injector assemblies are arranged in a substantially circular pattern of a first radius, and each includes an outlet port having a first divergence angle. The plurality of pilot fuel injector assemblies are arranged in a substantially circular pattern of a second radius. Each pilot fuel injector assembly is disposed between at least two main fuel injector assemblies, and each includes an outlet port having a second divergence angle.

Energy Index For Aircraft Maneuvers

Chidester, Thomas R., Inventor; Lynch, Robert E., Inventor; Lawrence, Robert E., Inventor; Amidan, Brett G., Inventor; Ferryman, Thomas A., Inventor; Drew, Douglas A., Inventor; Ainsworth, Robert J., Inventor; Prothero, Gary L., Inventor; Romanowski, Tomothy P., Inventor; Bloch, Laurent, Inventor; July 11, 2006; 9 pp.; In English; Original contains black and white illustrations

Patent Info.: Filed 22 Sept. 2004; US-Patent-7,075,457; US-Patent-Appl-SN-956523; NASA-Case-ARC-15356-1; No Copyright; Avail: CASI; A02, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20060049129>

Method and system for analyzing, separately or in combination, kinetic energy and potential energy and/or their time derivatives, measured or estimated or computed, for an aircraft in approach phase or in takeoff phase, to determine if the aircraft is or will be put in an anomalous configuration in order to join a stable approach path or takeoff path. A 3 reference value of kinetic energy and/or potential energy (or time derivatives thereof) is provided, and a comparison index for the estimated energy and reference energy is computed and compared with a normal range of index values for a corresponding aircraft maneuver. If the computed energy index lies outside the normal index range, this phase of the aircraft is identified as anomalous, non-normal or potentially unstable.

Channel-wing System for Thrust Deflection and Force/Moment Generation

Englar, Robert J., Inventor; Bushnell, Dennis M., Inventor; September 12, 2006; 10 pp.; In English; Original contains black and white illustrations

Patent Info.: Filed 14 Jun. 2004; US-Patent-7,104,498; US-Patent-Appl-SN-867114; NASA-Case-LAR-16496-1; US-Patent-Appl-SN-478186; No Copyright; Avail: CASI; A02, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20060050056>

An aircraft comprising a Channel Wing having blown circulation control wings (CCW) for various functions. The blown channel CCW includes a channel that has a rounded or near-round trailing edge. The channel further has a trailing-edge slot that is adjacent to the rounded trailing edge of the channel. The trailing-edge slot has an inlet connected to a source of pressurized air and is capable of tangentially discharging pressurized air over the rounded trailing edge. The aircraft further has a propeller that is located in the channel and ahead of the rounded trailing edge of the channel. The propeller provides a propeller thrust exhaust stream across the channel wing to propel the aircraft through the air and to provide high lift. The pressurized air being discharged over the rounded trailing edge provides a high lift that is obtained independent of an aircraft angle of attack, thus preventing the asymmetry, separated flow, and stall experienced by the CC wing at the high angle of attack it required for high lift generation. The aircraft can further include blown outboard circulation control wings

(CCW) that are synergistically connected to the blown channel CCWs. The blown outboard CCWs provide additional high lift, control thrust/drag interchange, and can provide all three aerodynamic moments when differential blowing is applied front-to-rear or left-to-right. Both the blown channel CCW and the outboard CCW also have leading-edge blowing slots to prevent flow separation or to provide aerodynamic moments for control.

Method for Constructing Composite Response Surfaces by Combining Neural Networks with Polynomial Interpolation or Estimation Techniques

Rai, Man Mohan, Inventor; Madavan, Nateri K., Inventor; March 13, 2007; 17 pp.; In English; Original contains black and white illustrations

Patent Info.: Filed 31 Jul. 2003; US-Patent-7,191,161; US-Patent-Appl-SN-637087; NASA-Case-ARC-14281-3; No

Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070023485>

A method and system for data modeling that incorporates the advantages of both traditional response surface methodology (RSM) and neural networks is disclosed. The invention partitions the parameters into a first set of s simple parameters, where observable data are expressible as low order polynomials, and c complex parameters that reflect more complicated variation of the observed data. Variation of the data with the simple parameters is modeled using polynomials; and variation of the data with the complex parameters at each vertex is analyzed using a neural network. Variations with the simple parameters and with the complex parameters are expressed using a first sequence of shape functions and a second sequence of neural network functions. The first and second sequences are multiplicatively combined to form a composite response surface, dependent upon the parameter values, that can be used to identify an accurate mode

A CMOS time-of-flight 'TOF' system-on-a-chip 'SoC' for precise time interval measurement with low power consumption and high counting rate has been developed. The analog and digital TOF chip may include two Constant Fraction Discriminators 'CFDs' and a Time-to-Digital Converter 'TDC'. The CFDs can interface to start and stop anodes through two preamplifiers and perform signal processing for time walk compensation. The TDC digitizes the time difference with reference to an off-chip precise external clock. One TOF output is an 11-bit digital word and a valid event trigger output indicating a valid event on the 11-bit output bus.

Report No.(s): PB2007-105842; No Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070025471>

There is provided methods, apparatus, and computer program products for implementing a KINSTLER maneuver for an exit vehicle that is departing from a rotating space vehicle such that the exit vehicle does not contact the space vehicle during departure. A composite spin axis of the space vehicle is determined, which defines a plurality of spin axis planes that contain the exit vehicle along the exit flight path. The spin rate of the rotating space vehicle is determined about the composite spin axis, and the exit vehicle is launched from the space vehicle, providing the exit vehicle with a departure velocity having a $V_{(sub\ S)}$ component. Lateral thrust is applied to provide a lateral acceleration, which provides a turn rate of the exit vehicle's

V(sub S) component in the spin axis plane about the composite spin axis that is proportionate to the spin rate of the rotating space vehicle.

ONLINE: <http://hdl.handle.net/2060/20070003580>

A tether system for providing thrust to or power subsystems of an artificial satellite in a low earth orbit. The tether has three main sections, an insulated section connected to the satellite, a conducting section connected to the insulating section for drawing in and releasing electrons from the space plasma and a non-conducting section for providing a tension to the other sections of the tether. An oxygen resistant coating is applied to the bare wire of the conducting section as well as the insulated wires of the insulated section that prevents breakdown during tether operations in the space plasma. The insulated and bare wire sections also surround a high tensile flexible polymer core to prevent any debris from breaking the tether during use.

Polyimides displaying low color in thin films, atomic oxygen resistance, vacuum ultraviolet radiation resistance, solubility in organic solvents in the imide form, high glass transition ($T_{(sub\ g)}$) temperatures, and high thermal stability are provided. The poly(amide acid)s, copoly(amide acid)s, polyimides and copolyimides are prepared by the reaction of stoichiometric ratios of an aromatic anhydride with diamines which contain phenylphosphine oxide groups in polar aprotic solvents. Controlled molecular weight oligomeric (amide acid)s and imides can be prepared by offsetting the stoichiometry according to the Carothers equation using excess diamine and endcapping with aromatic anhydrides. The polyimide materials can be processed into various material forms such as thin films, fibers, foams, threads, adhesive film, coatings, dry powders, and fiber coated prepreg, and uses include thin film membranes on antennas, second-surface mirrors, thermal optical coatings, and multilayer thermal insulation (MLI) blanket materials.

Self-metallizing polyimide films are created by doping polyamic acid solutions with metallic ions and solubilizing agents. Upon creating a film, the film is exposed to coherent light for a specific time and then cured. The resulting film has been found to have a metallic surface layer and a metallic subsurface layer (interlayer). The layer separating the metallic layer has a uniform dispersion of small metal particulates within the polymer. The layer below the interlayer has larger metal particulates uniformly distributed within the polymer. By varying the intensity or time of exposure to the coherent light, three-dimensional control of metal formation within the film is provided.

A method for providing for thermal conduction using an array of carbon nanotubes (CNTs). An array of vertically oriented CNTs is grown on a substrate having high thermal conductivity, and interstitial regions between adjacent CNTs in the array are partly or wholly filled with a filler material having a high thermal conductivity so that at least one end of each CNT is exposed. The exposed end of each CNT is pressed against a surface of an object from which heat is to be removed. The CNT-filler composite adjacent to the substrate provides improved mechanical strength to anchor CNTs in place and also serves as a heat spreader to improve diffusion of heat flux from the smaller volume (CNTs) to a larger heat sink.

ONLINE: <http://hdl.handle.net/2060/20070023393>

A double vacuum bag molding assembly with improved void management and laminate net shape control which provides a double vacuum environment for use in fabricating composites from prepregs containing air and/or volatiles such as reactive resin matrix composites or composites from solvent containing prepregs with non-reactive resins matrices. By using two vacuum environments during the curing process, a vacuum can be drawn during a B-stage of a two-step cycle without placing the composite under significant relative pressure. During the final cure stage, a significant pressure can be applied by releasing the vacuum in one of the two environments. Inner and outer bags are useful for creating the two vacuum environments with a perforated tool intermediate the two. The composite is placed intermediate a tool plate and a caul plate in the first

environment with the inner bag and tool plate defining the first environment. The second environment is characterized by the outer bag which is placed over the inner bag and the tool plate.

The invention is a process for making a composite structure having a honeycomb core and face sheets using vacuum bagging techniques without the use of an autoclave. In detail, the process includes the following steps: (1) forming a preform sandwich assembly having previously de-bulked cover sheets impregnated with a fiber-reinforced resin having a first curing temperature, a honeycomb core and sheets of adhesive between the cover sheets and core, the first layer of adhesive having a second curing temperature less than the first curing temperature; (2) vacuum bagging the preform and drawing a vacuum; (3) initially heating the vacuum bagged preform at a heating rate of between 0.5 degree and 2 degrees per minute until the gel temperature of said adhesive is reached; (4) holding the temperature at the gel temperature until the layer of adhesive has cured; (5) raising the temperature to the first curing temperature of the fiber-reinforced resin; and (6) maintaining the temperature at the first curing temperature until the fiber-reinforced resin has cured.

Report No.(s): PB2007-102967; No Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070024449>

The present invention is directed to the creation of macroscopic materials and objects comprising aligned nanotube segments. The invention entails aligning single-wall carbon nanotube (SWNT) segments that are suspended in a fluid medium and then removing the aligned segments from suspension in a way that macroscopic, ordered assemblies of SWNT are formed. The invention is further directed to controlling the natural proclivity of nanotube segments to self assemble into ordered structures by modifying the environment of the nanotubes and the history of that environment prior to and during the process. The materials and objects are 'macroscopic' in that they are large enough to be seen without the aid of a microscope or of the dimensions of such objects. These macroscopic, ordered SWNT materials and objects have the remarkable physical, electrical, and chemical properties that SWNT exhibit on the microscopic scale because they are comprised of nanotubes, each of which is aligned in the same direction and in contact with its nearest neighbors. An ordered assembly of closest SWNT also serves as a template for growth of more and larger ordered assemblies. An ordered assembly further serves as a foundation for post processing treatments that modify the assembly internally to specifically enhance selected material properties such as shear strength, tensile strength, compressive strength, toughness, electrical conductivity, and thermal conductivity.

Polyimides displaying low color in thin films, atomic oxygen resistance, vacuum ultraviolet radiation resistance, solubility in organic solvents in the imide form, high glass transition ($T_{sub.g}$) temperatures, and high thermal stability are provided. The poly(amide acid)s, copoly(amide acid)s, polyimides and copolyimides are prepared by the reaction of stoichiometric ratios of an aromatic dianhydride with diamines which contain phenylphosphine oxide groups in polar aprotic solvents. Controlled molecular weight oligomeric (amide acid)s and imides can be prepared by offsetting the stoichiometry according to the Carothers equation using excess diamine and endcapping with aromatic anhydrides. The polyimide materials can be processed into various material forms such as thin films, fibers, foams, threads, adhesive film, coatings, dry powders, and fiber coated prepreg, and uses include thin film membranes on antennas, second-surface mirrors, thermal optical coatings, and multi-layer thermal insulation (MLI) blanket materials.

Apparatus and methods for multi-layer foam structures are disclosed. In one embodiment, a method includes filling a first portion of a receptacle with a removable filler. A second portion of the receptacle is filled with a first foam forming a first foam layer. The removable filler is removed, and at least part of the first portion of the receptacle is filled with a second foam, forming a second foam layer. The first foam may include a polyimide foam, and the second foam may include a polyurethane

foam. Other aspects of the invention include a skin attached to the receptacle and the first foam. In other embodiments, hexagonal honeycomb matrix may be used as a receptacle for the first foam and the second foam.

Coating materials for coating the electrodes of a fuel cell are disclosed. In one embodiment, the coating materials comprise perfluoroalkanesulfonic acids having the general formula $F_{(3)}C--(CF_{(2)})_{(n)}--SO_{(3)}H$, wherein n ranges from 8 to 17. In another embodiment, the coating materials comprise perfluoroalkanesulfonimides having the general formula $C_{(n)}F_{(2n+1)}SO_{(2)}NHO_{(2)}SF_{(2m+1)}C_{(m)}$, wherein the sum of m and n ranges from 8 to 17. These long chain sulfonic acids and imides impart improved electrode performance and decrease polarization.

An array of spatially-separated optical detectors is configured to receive a free-space optical communication signal from a remote source. Each optical detector of the array includes an optical system and an array of light sensors. The optical system collects a portion of light received from the remote source and directs it toward the array of light sensors. The array of light

sensors, in turn, converts the collected portion of light to one or more electrical, detected signals corresponding to the collected portion of light. A processor is coupled to the array of spatially-separated optical detectors, receiving the detected signals and combining the received signals to obtain information borne by the received optical communication signal.

Real-time Signal-to-noise Ratio (SNR) Estimation for BPSK and QPSK Modulation Using the Active Communications Channel

Manning, Robert M., Inventor; March 13, 2007; 15 pp.; In English; Original contains black and white illustrations
 Patent Info.: Filed 21 Oct. 2002; US-Patent-7,190,741; US-Patent-Appl-SN-274756; NASA-Case-LEW-16901-1; No
 Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070023394>

Method and apparatus for estimating signal-to-noise ratio (SNR) γ of a composite input signal $e(t)$ on a phase modulated (e.g., BPSK) communications link. A first demodulator receives the composite input signal and a stable carrier signal and outputs an in-phase output signal; a second demodulator receives the composite input signal and a phase-shifted version of the carrier signal and outputs a quadrature-phase output signal; and phase error $\theta_E(t)$ contained within the composite input signal $e(t)$ is calculated from the outputs of the first and second demodulators. A time series of statistically independent phase error measurements $\theta_E(t_1), \theta_E(t_2), \dots, \theta_E(t_k)$ is obtained from the composite input signal subtending a time interval $\Delta t = t_k - t_1$ whose value is small enough such that $\gamma(t)$ and $\sigma(t)$ can be taken to be constant in Δt . A biased estimate γ^* for the signal-to-noise ratio (SNR) γ if the composite input signal is calculated using maximum likelihood (ML) estimation techniques, and an unbiased estimate $\hat{\gamma}$ for the signal-to-noise ratio (SNR) γ of the composite input signal is determined from the biased estimate γ^* , such as by use of a look-up table.

ONLINE: <http://hdl.handle.net/2060/20060048505>

A flexible framework supports electrically-conductive elements in a capacitive sensing arrangement. Identical frames are arranged end-to-end with adjacent frames being capable of rotational movement there between. Each frame has first and second passages extending therethrough and parallel to one another. Each of the first and second passages is adapted to receive an electrically-conductive element therethrough. Each frame further has a hollowed-out portion for the passage of a fluent material therethrough. The hollowed-out portion is sized and shaped to provide for capacitive sensing along a defined region between the electrically-conductive element in the first passage and the electrically-conductive element in the second passage.

A system and method use a wireless tether comprising a transmitter and a receiver to alert a caregiver that an object has been left unattended. A detector senses the presence of the object, usually a child, located in a position such as a safety seat. The detector is operatively coupled to the transmitter, which is located near the object. The transmitter transmits at least one wireless signal when the object is in the position. The receiver, which is remotely located from the transmitter, senses at least one signal as long as the receiver is within a prescribed range of transmission. By performing a timing function, the receiver monitors the proximity of the caregiver, who maintains possession of the receiver, to the transmitter. The system communicates an alarm to the caregiver when the caregiver ventures outside the range of transmission without having removed the object from the position.

ONLINE: <http://hdl.handle.net/2060/20060050108>

Magnetic field response sensors designed as passive inductor-capacitor circuits produce magnetic field responses whose harmonic frequencies correspond to states of physical properties for which the sensors measure. Power to the sensing element is acquired using Faraday induction. A radio frequency antenna produces the time varying magnetic field used for powering the sensor, as well as receiving the magnetic field response of the sensor. An interrogation architecture for discerning changes in sensor's response frequency, resistance and amplitude is integral to the method thus enabling a variety of measurements. Multiple sensors can be interrogated using this method, thus eliminating the need to have a data acquisition channel dedicated to each sensor. The method does not require the sensors to be in proximity to any form of acquisition hardware. A vast array of sensors can be used as interchangeable parts in an overall sensing system.

A superconductive contact or contact structure composed mainly of superconductors and a hydroxide-catalyzed bond that establishes electrical contacts, retains superconductivity, and provides the full mechanical fastening strength between the superconductors. According to the present invention, the superconductive contact structure exhibits a single-film superconductive behavior. In some embodiments, the structure has a configuration of two metallic low critical-temperature (low-T.sub.c) superconductors, such as niobium (Nb), connectorized by an essentially transparent and extremely thin hydroxide-catalyzed bond. In some embodiments, two ceramic high critical-temperature (high-T.sub.c) superconductors, such as perovskite ceramics (e.g., YBa.sub.2Cu.sub.3O.sub.7 or YBCO in general) are joined via a hydroxide-catalyzed bond. In some embodiments, a metallic low-T.sub.c superconductor and a ceramic high-T.sub.c superconductor is connectorized via a hydroxide-catalyzed bond.

A Superconducting Quantum Interference Device (SQUID) is disclosed comprising a pair of resistively shunted Josephson junctions connected in parallel within a superconducting loop and biased by an external direct current (dc) source. The SQUID comprises a semiconductor substrate and at least one superconducting layer. The metal layer(s) are separated by or covered with a semiconductor material layer having the properties of a conductor at room temperature and the properties of an insulator at operating temperatures (generally less than 100 Kelvin). The properties of the semiconductor material layer greatly reduces the risk of electrostatic discharge that can damage the device during normal handling of the device at room temperature, while still providing the insulating properties desired to allow normal functioning of the device at its operating temperature. A method of manufacturing the SQUID device is also disclosed.

ONLINE: <http://hdl.handle.net/2060/20070023396>

A sensor has a plurality of carbon nanotube (CNT)-based conductors operatively positioned on a substrate. The conductors are arranged side-by-side, such as in a substantially parallel relationship to one another. At least one pair of spaced-apart electrodes is coupled to opposing ends of the conductors. A portion of each of the conductors spanning between each pair of electrodes comprises a plurality of carbon nanotubes arranged end-to-end and substantially aligned along an axis. Because a direct correlation exists between resistance of a carbon nanotube and carbon nanotube strain, changes experienced by the portion of the structure to which the sensor is coupled induce a change in electrical properties of the conductors.

A low power, high voltage power supply system includes a high voltage power supply stage and a preregulator for programming the power supply stage so as to produce an output voltage which is a predetermined fraction of a desired voltage level. The power supply stage includes a high voltage, voltage doubler stage connected to receive the output voltage from the preregulator and for, when activated, providing amplification of the output voltage to the desired voltage level. A first feedback loop is connected between the output of the preregulator and an input of the preregulator while a second feedback loop is connected between the output of the power supply stage and the input of the preregulator.

ONLINE: <http://hdl.handle.net/2060/20070023486>

An ultrasonic device and method obtains desirable crimp connections between a crimp connector and a wire, or bundle of wires, by assessing the desirability of connections made in a wire-to-wire connection and in other situations where two materials with good acoustic propagation characteristics are joined together via deformation. An embodiment of the device as a crimping tool comprises a compressing means, pulse-generating circuitry, at least one ultrasonic transmitting transducer, at least one ultrasonic receiving transducer, receiving circuitry, and a display. The user may return to a previously crimped connection and assess the desirability of the connection by compressing the device about the connection, sending an acoustic signal through the crimp, and comparing the received signal to a signal obtained from known desirable connections.

A method for fabricating an electrical interconnect between two or more electrical components. A conductive layer is provided on a substrate and a thin, patterned catalyst array is deposited on an exposed surface of the conductive layer. A gas or vapor of a metallic precursor of a metal nanowire (MeNW) is provided around the catalyst array, and MeNWs grow between the conductive layer and the catalyst array. The catalyst array and a portion of each of the MeNWs are removed to provide exposed ends of the MeNWs.

ONLINE: <http://hdl.handle.net/2060/20070023496>

Magnetic field response sensors designed as passive inductor- capacitor circuits produce magnetic field responses whose harmonic frequencies correspond to states of physical properties for which the sensors measure. Power to the sensing element is acquired using Faraday induction. A radio frequency antenna produces the time varying magnetic field used for powering the sensor, as well as receiving the magnetic field response of the sensor. An interrogation architecture for discerning changes in sensor's response frequency, resistance and amplitude is integral to the method thus enabling a variety of measurements. Multiple sensors can be interrogated using this method, thus eliminating the need to have a data acquisition channel dedicated to each sensor. The method does not require the sensors to be in proximity to any form of acquisition hardware. A vast array of sensors can be used as interchangeable parts in an overall sensing system.

Fiber Coupled Laser Diodes with Even Illumination Pattern

Howard, Richard T., Inventor; 6 Feb. 2007; 11 pp.; In English; Original contains black and white illustrations; US-Patent-7,174,077; US-Patent-App1-10/631220; NASA-Case-MFS-31843-1; No Copyright; Avail: CASI; A03, Hardcopy ONLINE: <http://hdl.handle.net/2060/20070023678>

An optical fiber for evenly illuminating a target. The optical fiber is coupled to a laser emitting diode and receives laser light. The laser light travels through the fiber optic and exits at an exit end. The exit end has a diffractive optical pattern formed thereon via etching, molding or cutting, to reduce the Gaussian profile present in conventional fiber optic cables. The reduction of the Gaussian provides an even illumination from the fiber optic cable.

Self-Calibrating Pressure Transducer

Lueck, Dale E., Inventor; May 16, 2006; 11 pp.; In English; Original contains black and white illustrations

Patent Info.: Filed 17 Jun. 2004; US-Patent-7,043,960; US-Patent-Appl-SN-873997; NASA-Case-KSC-12350; No

Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20060048567>

A self-calibrating pressure transducer is disclosed. The device uses an embedded zirconia membrane which pumps a determined quantity of oxygen into the device. The associated pressure can be determined, and thus, the transducer pressure readings can be calibrated. The zirconia membrane obtains oxygen from the surrounding environment when possible. Otherwise, an oxygen reservoir or other source is utilized. In another embodiment, a reversible fuel cell assembly is used to pump oxygen and hydrogen into the system. Since a known amount of gas is pumped across the cell, the pressure produced can be determined, and thus, the device can be calibrated. An isolation valve system is used to allow the device to be calibrated in situ. Calibration is optionally automated so that calibration can be continuously monitored. The device is preferably a fully integrated MEMS device. Since the device can be calibrated without removing it from the process, reductions in costs and down time are realized.

ONLINE: <http://hdl.handle.net/2060/20060050048>

A motor controller system uses a rotary sensor with a plurality of signal conditioning units, coupled to the rotary sensor. Each of these units, which is associated with a particular range of motor output shaft rotation rates, generate a feedback signal indicative of the position of the motor's output shaft. A controller (i) converts a selected motor output shaft rotation rate to a corresponding incremental amount of rotational movement for a selected fixed time period, (ii) selects, at periodic completions of the selected fixed time period, the feedback signal from one of the signal conditioning units for which the particular range of motor output shaft rotation rates associated therewith encompasses the selected motor output shaft rotation

rate, and (iii) generates a motor drive signal based on a difference between the incremental amount of rotational movement and the feedback signal from the selected one of the signal conditioning Units.

Interrupt-based Phase-locked Frequency Multiplier

Palumbo, Daniel L., Inventor; July 04, 2006; 7 pp.; In English; Original contains black and white illustrations
 Patent Info.: Filed 17 Sep. 2004; US-Patent-7,071,741; US-Patent-Appl-SN-943825; NASA-Case-LAR-16134-1; No Copyright; Avail: CASI; A02, Hardcopy
 ONLINE: <http://hdl.handle.net/2060/20060050057>

A method and system utilize a processor's digital timer and two interrupts to form a frequency multiplier. The first interrupt's processing time window is definable by a first number of counts $C_{(sub\ 1)}$, of the digital timer while the second interrupt's processing time window is definable by a second number of counts $C_{(sub\ 2)}$ of the digital timer. A count value CV utilized by the system method is based on a desired frequency multiplier $N_{(sub\ 1)}$, the timer clock rate, and the time required for one cycle of an input signal. The first interrupt is triggered upon completion of one cycle of the input signal at which point the processing time window associated therewith begins. The second interrupt is triggered each time the timer's overflow signal is generated at which point the processing time window associated with the second interrupt begins. During the occurrence of the second interrupt's processing, the count value CV is modified to maintain the first interrupt's processing time window approximately centered between two of the second interrupt's processing time windows.

Global Radius of Curvature Estimation and Control System for Segmented Mirrors

Rakoczy, John M., Inventor; May 23, 2006; 23 pp.; In English; Original contains black and white illustrations
 Patent Info.: Filed 6 Aug. 2003; US-Patent-7,050,161; US-Patent-Appl-SN-637085; NASA-Case-MFS-31807-1; No Copyright; Avail: CASI; A03, Hardcopy
 ONLINE: <http://hdl.handle.net/2060/20060050060>

An apparatus controls positions of plural mirror segments in a segmented mirror with an edge sensor system and a

controller. Current mirror segment edge sensor measurements and edge sensor reference measurements are compared with calculated edge sensor bias measurements representing a global radius of curvature. Accumulated prior actuator commands output from an edge sensor control unit are combined with an estimator matrix to form the edge sensor bias measurements. An optimal control matrix unit then accumulates the plurality of edge sensor error signals calculated by the summation unit and outputs the corresponding plurality of actuator commands. The plural mirror actuators respond to the actuator commands by moving respective positions of the mirror segments. A predetermined number of boundary conditions, corresponding to a plurality of hexagonal mirror locations, are removed to afford mathematical matrix calculation.

ONLINE: <http://hdl.handle.net/2060/20070023494>

A system and method are provided for detecting cracks and their location in a structure. A circuit coupled to a structure has capacitive strain sensors coupled sequentially and in parallel to one another. When excited by a variable magnetic field, the circuit has a resonant frequency that is different for unstrained and strained states. In terms of strained states, the resonant frequency is indicative of a region of the circuit that is experiencing strain induced by strain in a region of the structure in

proximity to the region of the circuit. An inductor is electrically coupled to one end of each circuit. A magnetic field response recorder wirelessly transmits the variable magnetic field to the inductor and senses the resonant frequency of the circuit so-excited by the variable magnetic field.

Solar Cell Mechanical Interconnection Using Direct Wafer Bonding

Aiken, Daniel, Inventor; July 28, 2005; 6 pp.; In English

Contract(s)/Grant(s): NAS3-02201

Patent Info.: Filed 27 Jan. 2004; US-Patent-Appl-SN-10-765532

Report No.(s): PB2007-102836; No Copyright; Avail: CASI; A02, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070015919>

A multi-junction solar cell includes a plurality of monolithic cells joined together by direct wafer bonds. Each monolithic cell has at least one junction. The direct wafer bonds include no intervening material between joined monolithic cells. The direct wafer bonds are achieved by bonding forces between dipoles at the surfaces of adjoining monolithic cells.

ONLINE: <http://hdl.handle.net/2060/20060050046>

System and method for enclosing cells and/or tissue, for purposes of growth, cell differentiation, suppression of cell differentiation, biological processing and/or transplantation of cells and tissues (biological inserts), and for secretion, sensing and monitoring of selected chemical substances and activation of gene expression of biological inserts implanted into a human body. Selected cells and/or tissue are enveloped in a 'cage' that is primarily carbon nanotube Bucky paper, with a selected thickness and porosity. Optionally, selected functional groups, proteins and/or peptides are attached to the carbon nanotube cage, or included within the cage, to enhance the growth and/or differentiation of the cells and/or tissue, to select for certain

cellular sub-populations, to optimize certain functions of the cells and/or tissue and/or to optimize the passage of chemicals across the cage surface(s). A cage system is also used as an immun shield and to control operation of a nano-device or macroscopic device, located within the cage, to provide or transform a selected chemical and/or a selected signal.

System for Solving Diagnosis and Hitting Set Problems

Fijany, A., Inventor; Vatan, F., Inventor; August 31, 2006; 27 pp.; In English

Patent Info.: Filed Filed 13 Feb 06; US-Patent-Appl-SN-11-353-673

Report No.(s): PB2007-101668; No Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070014850>

The diagnosis problem arises when a system's actual behavior contradicts the expected behavior, thereby exhibiting symptoms (a collection of conflict sets). System diagnosis is then the task of identifying faulty components that are responsible

for anomalous behavior. To solve the diagnosis problem, the present invention describes a method for finding the minimal set of faulty components (minimal diagnosis set) that explain the conflict sets. The method includes acts of creating a matrix of the collection of conflict sets, and then creating nodes from the matrix such that each node is a node in a search tree. A determination is made as to whether each node is a leaf node or has any children nodes. If any given node has children nodes, then the node is split until all nodes are leaf nodes. Information gathered from the leaf nodes is used to determine the minimal diagnosis set.

ONLINE: <http://hdl.handle.net/2060/20070025065>

Methods are disclosed for providing a means for identifying recovered component parts of a destroyed assembly quickly and relatively easily using digital or electronic scanning techniques and comparison to virtual components that are presumed to have constituted the original assembly. The method also provides a means for digitally rigging the component parts in three-dimensional virtual space, thereby minimizing and, in some situations, possibly eliminating any need to physical rig the component parts. The methods include texture mapping a photographic image of a component part onto a representation of the component.

Compression of a Data Stream by Selection among a Set of Compression Tools

Arlid, Bertelrud, Inventor; Russell, Franz, Inventor; February 20, 2007; 12 pp.; In English; Original contains black and white illustrations

Patent Info.: Filed 26 Mar. 2002; US-Patent-7,180,943; US-Patent-Appl-SN-113637; NASA-Case-DRC-001-049; No Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070023420>

A stream of raw data is compressed prior to transmission in a communication channel by a system which includes modules for choosing a current segment of the raw data stream for processing and defining a set of operators for representing data segments by a mathematical operation and parameters thereof. The system performs a competitive evaluation of different tools

comprising different combinations of one or more of the operators and the parameters thereof with respect to the current data segment in order to determine relative abilities among the different tools to reduce the number of bits required to represent the current data segment. The system then selects a tool and a set of parameters thereof found in the competitive evaluation to have a superior ability relative to others of the different tools to reduce a number of bits required to represent the current data segment.

ONLINE: <http://hdl.handle.net/2060/20060050053>

A Microscope Imaging System (CMIS) with intelligent controls is disclosed that provides techniques for scanning, identifying, detecting and tracking microscopic changes in selected characteristics or features of various surfaces including, but not limited to, cells, spheres, and manufactured products subject to difficult-to-see imperfections. The practice of the present invention provides applications that include colloidal hard spheres experiments, biological cell detection for patch clamping, cell movement and tracking, as well as defect identification in products, such as semiconductor devices, where surface damage can be significant, but difficult to detect. The CMIS system is a machine vision system, which combines intelligent image processing with remote control capabilities and provides the ability to autofocus on a microscope sample, automatically scan an image, and perform machine vision analysis on multiple samples simultaneously.

Optimization of Training Sets For Neural-Net Processing of Characteristic Patterns From Vibrating Solids

Decker, Arthur J., Inventor; July 04, 2006; 25 pp.; In English; Original contains black and white illustrations
Patent Info.: Filed 1 Apr. 2003; US-Patent-7,072,874; US-Patent-Appl-SN-404725; NASA-CASE-LEW-17,238-1;
US-Patent-Appl-SN-404222; No Copyright; Avail: CASI; A03, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20060050064>

An artificial neural network is disclosed that processes holography generated characteristic pattern of vibrating structures along with finite-element models. The present invention provides for a folding operation for conditioning training sets for optimally training forward-neural networks to process characteristic fringe pattern. The folding pattern increases the sensitivity of the feed-forward network for detecting changes in the characteristic pattern. The folding routine manipulates input pixels so as to be scaled according to the location in an intensity range rather than the position in the characteristic pattern.

Architecture for Robot Intelligence

Peters, R. A.; 31 Dec 03; 13 pp.; In English

Contract(s)/Grant(s): DASG600110001; DASG609910005

Patent Info.: Filed 31 Dec 03; US-Patent-Appl-SN-10-749 326

Report No.(s): PB2007-103269; No Copyright; Avail: CASI; A03, Hardcopy

An architecture for robot intelligence enables a robot to learn new behaviors and create new behavior sequences autonomously and interact with a dynamically changing environment. Sensory information is mapped onto a Sensory Ego-Sphere (SES) that rapidly identifies important changes in the environment and functions much like short term memory. Behaviors are stored in a DBAM that creates an active map from the robot's current state to a goal state and functions much like long term memory. A dream state converts recent activities stored in the SES and creates or modifies behaviors in the DBAM.

Production of Stable Aqueous Dispersions of Carbon Nanotubes Government Interests

Clarke, M. S.; Feedback, D. L.; 2 Nov 04; 13 pp.; In English

Contract(s)/Grant(s): NCC.SUB.9-41

Patent Info.: Filed 2 Nov 04; US-Patent-Appl-SN-10-978 333

Report No.(s): PB2007-101625; No Copyright; Avail: CASI; A03, Hardcopy

Methods of producing stable dispersions of single-walled carbon nanotube structures in solutions are achieved utilizing dispersal agents. The dispersal agents are effective in substantially solubilizing and dispersing single-walled carbon nanotube structures in aqueous solutions by coating the structures and increasing the surface interaction between the structures and water. Exemplary agents suitable for dispersing nanotube structures in aqueous solutions include synthetic and natural detergents having high surfactant properties, deoxycholates, cyclodextrins, chaotropic salts and ion pairing agents. The dispersed nanotube structures may further be deposited on a suitable surface in isolated and individualized form to facilitate easy characterization and further processing of the structures.

Embodiments of the present invention described and shown in the specification aid drawings include a combination responsive to an acoustic wave that can be utilized as a dynamic pressure sensor. In one embodiment of the present invention, the combination has a substrate having a first surface and an opposite second surface, a microphone positioned on the first surface of the substrate and having an input and a first output and a second output, wherein the input receives a biased voltage, and the microphone generates an output signal responsive to the acoustic wave between the first output and the second output. The combination further has an amplifier positioned on the first surface of the substrate and having a first input and a second input and an output, wherein the first input of the amplifier is electrically coupled to the first output of the microphone and the second input of the amplifier is electrically coupled to the second output of the microphone for receiving the output signal from the microphone. The amplifier is spaced from the microphone with a separation smaller than 0.5 mm.

Passive Gas-Gap Heat Switch for Adiabatic Demagnetization Refrigerator

Shirron, P. J., Inventor; Di Pirro, M. J., Inventor; October 20, 2005; 9 pp.; In English

Patent Info.: Filed 10 May 05; US-Patent-Appl-SN-11-126-516

Report No.(s): PB2007-105949; No Copyright; Avail: CASI; A02, Hardcopy

ONLINE: <http://hdl.handle.net/2060/20070014854>

A passive gas-gap heat switch for use with a multi-stage continuous adiabatic demagnetization refrigerator (ADR). The passive gas-gap heat switch turns on automatically when the temperature of either side of the switch rises above a threshold value and turns off when the temperature on either side of the switch falls below this threshold value. One of the heat switches in this multistage process must be conductive in the 0.25.degree. K to 0.3.degree. K range. All of the heat switches must be capable of switching off in a short period of time (1-2 minutes), and when off to have a very low thermal conductance. This arrangement allows cyclic cooling cycles to be used without the need for separate heat switch controls.

 ONLINE: <http://hdl.handle.net/2060/20060049148>

A non-contact fast erase method for erasing information stored on a magnetic or optical media. The magnetic media element includes a magnetic surface affixed to a toroidal conductor and stores information in a magnetic polarization pattern. The fast erase method includes applying an alternating current to a planar inductive element positioned near the toroidal conductor, inducing an alternating current in the toroidal conductor, and heating the magnetic surface to a temperature that exceeds the Curie-point so that information stored on the magnetic media element is permanently erased. The optical disc element stores information in a plurality of locations being defined by pits and lands in a toroidal conductive layer. The fast erase method includes similarly inducing a plurality of currents in the optical media element conductive layer and melting a predetermined portion of the conductive layer so that the information stored on the optical medium is destroyed.

Space Environmentally Durable Polyimides and Copolyimides – 14

ANALOG CIRCUITS

Time-Mode Analog Computation Circuits and Methods – 34

ANCHORS (FASTENERS)

Self Mountable and Extractable Ultrasonic/Sonic Anchor – 44

ANEMOMETERS

Microscale Out-Of-Plane Anemometer – 38

ANGLE OF ATTACK

Channel-wing System for Thrust Deflection and Force/Moment Generation – 11

ANGLES (GEOMETRY)

Method for Correcting Control Surface Angle Measurements in Single Viewpoint Photogrammetry – 4

ANODES

Carbon Materials Metal/Metal Oxide Nanoparticle Composite and Battery Anode Composed of the Same – 16

APPROACH CONTROL

Real Time Analysis and Display of Aircraft Approach Maneuvers – 8

AQUEOUS SOLUTIONS

Production of Stable Aqueous Dispersions of Carbon Nanotubes Government Interests – 54

ARRAYS

MEMS Based Acoustic Array – 55

ARTIFICIAL INTELLIGENCE

Architecture for Robot Intelligence – 52

ARTIFICIAL SATELLITES

Electrodynamic Tether – 13

ASSEMBLIES

Investigation of Destroyed Assemblies and Identification of Components Thereof Using Texture Mapping – 50

AUTOMATIC CONTROL

Encrypting Digital Camera with Automatic Encryption Key Deletion – 38

Evolutionary Technique for Automated Synthesis of Electronic Circuits – 35

Intelligent Weather Agent – 43

BAGS

Double Vacuum Bag Process for Resin Matrix Composite Manufacturing – 17

BARRIER LAYERS

Thermal Resistant Environmental Barrier Coating – 16

BINARY PHASE SHIFT KEYING

Real-time Signal-to-noise Ratio (SNR) Estimation for BPSK and QPSK Modulation Using the Active Communications Channel – 26

BINDERS (MATERIALS)

Composite Materials Containing a Nanostructured Carbon Binder Phase and High Pressure Process for Making the Same – 19

BIOPOLYMERS

Polyurea Aerogels – 16

BIOPROCESSING

Provision Of Carbon Nanotube Bucky Paper Cages For Immune Shielding Of Cells, Tissues, and Medical Devices – 49

BOILERS

Method and Apparatus for the Portable Identification Of Material Thickness And Defects Along Uneven Surfaces Using Spatially Controlled Heat Application – 25

BONDING

Microwave Bonding of MEMS Component – 33

Solar Cell Mechanical Interconnection Using Direct Wafer Bonding – 48

Superconductive Contacts with Hydroxide-catalyzed Bonds that Retain Superconductivity and Provide Mechanical Fastening Strength – 32

BOUNDARY LAYER SEPARATION

Channel-wing System for Thrust Deflection and Force/Moment Generation – 11

Trailing Vortex Management via Boundary Layer Separation Control – 1

CADMIUM TELLURIDES

Cadmium-Zinc-Telluride Detectors – 40

CALIBRATING

Method and Apparatus for the Portable Identification Of Material Thickness And Defects Along Uneven Surfaces Using Spatially Controlled Heat Application – 25

Self-Calibrating Pressure Transducer – 41

CAPACITANCE

Flexible Framework for Capacitive Sensing – 27

CAPACITORS

Magnetic Field Response Sensor For Conductive Media – 29

CARBON NANOTUBES

Carbon Nanotube Based Light Sensor – 30

Carbon Nanotube Interconnect – 27

Carbon Nanotube-based Sensor and Method for Continuously Sensing Changes in a Structure – 35

Continuous Organic and Inorganic Matrix Composite Fibrils and Methods for Their Production from Carbon Nanotubes – 14

Macroscopic Ordered Assembly of Carbon Nanotubes – 22

Nanoengineered Thermal Materials Based on Carbon Nanotube Array Composites – 15

Production of Stable Aqueous Dispersions of Carbon Nanotubes Government Interests – 54

Provision Of Carbon Nanotube Bucky Paper Cages For Immune Shielding Of Cells, Tissues, and Medical Devices – 48

Systems and Methods for Producing Single-walled Carbon Nanotubes (SWNTS) on a Substrate – 14

Templated Growth of Carbon Nanotubes – 18

CARBON

Carbon Materials Metal/Metal Oxide Nanoparticle Composite and Battery Anode Composed of the Same – 16

Composite Materials Containing a Nanostructured Carbon Binder Phase and High Pressure Process for Making the Same – 19

CATALYSIS

Superconductive Contacts with Hydroxide-catalyzed Bonds that Retain Superconductivity and Provide Mechanical Fastening Strength – 32

CATALYSTS

Metallic Nanowire Interconnections for Integrated Circuit Fabrication – 37

CELL MEMBRANES (BIOLOGY)

Bucky Paper as a Support Membrane in Retinal Cell Transplantation – 49

CELLS (BIOLOGY)

Operation of a Cartesian Robotic System in a Compact Microscope with Intelligent Controls – 51

Provision Of Carbon Nanotube Bucky Paper Cages For Immune Shielding Of Cells, Tissues, and Medical Devices – 48

CHANNEL WINGS

Channel-wing System for Thrust Deflection and Force/Moment Generation – 11

CHANNELS (DATA TRANSMISSION)

Compression of a Data Stream by Selection among a Set of Compression Tools – 51

Real-time Signal-to-noise Ratio (SNR) Estimation for BPSK and QPSK Modulation Using the Active Communications Channel – 26

CHEMICAL REACTIONS

UV Induced Oxidation of Nitric Oxide – 20

CHIPS

Time of Flight System on a Chip – 12

CIRCUITS

Evolutionary Technique for Automated Synthesis of Electronic Circuits – 35

Magnetic Field Response Measurement Acquisition System – 39

CIVIL AVIATION

Historical Analysis of Aircraft Flight Parameters – 3

Information Display System for Atypical Flight Phase – 2

COATINGS

Perfluoroalkanesulfonic Acides and Perfluoroalkanesulfonimides as Electrode Additives for Fuel Cells – 24

COGNITION

Sensory Ego-Sphere: A Mediating Interface between Sensors and Cognition – 53

COHERENCE

Multi-Functional Plasmon-Resonant Contrast Agents for Optical Coherence Tomography – 58

COLLOIDS

Operation of a Cartesian Robotic System in a Compact Microscope with Intelligent Controls – 51

COMBUSTION CHAMBERS

Reduced Exhaust Emissions Gas Turbine Engine Combustor – 9

Stagnation Point Reverse Flow Combustor for a Combustion System – 46

COMBUSTION

Stagnation Point Reverse Flow Combustor for a Combustion System – 46

COMMUNICATION NETWORKS

Real-time Signal-to-noise Ratio (SNR) Estimation for BPSK and QPSK Modulation Using the Active Communications Channel – 26

COMPONENTS

Investigation of Destroyed Assemblies and Identification of Components Thereof Using Texture Mapping – 50

COMPOSITE MATERIALS

Carbon Materials Metal/Metal Oxide Nanoparticle Composite and Battery Anode Composed of the Same – 16

Composite Materials Containing a Nanostructured Carbon Binder Phase and High Pressure Process for Making the Same – 19

Method of Fabricating a Composite Apparatus – 17

COMPOSITE STRUCTURES

Process for the Manufacture of Composite Structures – 18

COMPUTER PROGRAMS

Method, Apparatus and Computer Program Product for Safe Exit Maneuver from Dimensionally Extended Rotating Space Vehicle – 13

COMPUTER SYSTEMS DESIGN

Systems, Methods and Apparatus for Determining Physical Properties of Fluids – 45

CONCENTRATION (COMPOSITION)

Concentration of Hydrogen Peroxide – 20

CONDUCTIVE HEAT TRANSFER

Nanoengineered Thermal Materials Based on Carbon Nanotube Array Composites – 15

CONDUCTORS

Fast Erase Method and Apparatus For Digital Media – 59

CONNECTORS

Device and Method for Connections Made Between a Crimp Connector and Wire – 37

CONTROL EQUIPMENT

Global Radius of Curvature Estimation and Control System for Segmented Mirrors – 43

Provision Of Carbon Nanotube Bucky Paper Cages For Immune Shielding Of Cells, Tissues, and Medical Devices – 48

CONTROL SURFACES

Method for Constructing Composite Response Surfaces by Combining Neural Networks with Polynomial Interpolation or Estimation Techniques – 11

Method for Correcting Control Surface Angle Measurements in Single Viewpoint Photogrammetry – 4

CONTROL SYSTEMS DESIGN

Flight Control Actuation System – 6

Method and Apparatus for Loss of Control Inhibitor Systems – 7

CONTROLLERS

Motor Controller System For Large Dynamic Range of Motor Operation – 42

CORRECTION

Method for Correcting Control Surface Angle Measurements in Single Viewpoint Photogrammetry – 4

COUPLED MODES

Vertically-coupled Whispering Gallery Mode Resonator Optical Waveguide, and Methods – 56

CRACKING (FRACTURING)

System and Method for Detecting Cracks and their Location – 48

CRACKS

System and Method for Detecting Cracks and their Location – 48

CRYOGENICS

Charge Dissipative Dielectric for Cryogenic Devices – 34

Multifunctional Cryo-Insulation Apparatus and Methods – 23

CRYPTOGRAPHY

Encrypting Digital Camera with Automatic Encryption Key Deletion – 38

CURRENT DENSITY

Carbon Nanotube Interconnect – 28

CURVATURE

Global Radius of Curvature Estimation and Control System for Segmented Mirrors – 43

DATA ACQUISITION

Magnetic Field Response Measurement Acquisition System – 30

DATA COMPRESSION

Compression of a Data Stream by Selection among a Set of Compression Tools – 51

DATA FLOW ANALYSIS

Compression of a Data Stream by Selection among a Set of Compression Tools – 51

DATA PROCESSING

Information Display System for Atypical Flight Phase – 2

DEFECTS

Method and Apparatus for the Portable Identification Of Material Thickness And Defects Along Uneven Surfaces Using Spatially Controlled Heat Application – 25

DEMAGNETIZATION

Passive Gas-Gap Heat Switch for Adiabatic Demagnetization Refrigerator – 56

DEPLOYMENT

Depolyable Structural Assemblies, Systems for Deploying Such Structural Assemblies and Related Methods – 47

DERIVATION

Energy Index For Aircraft Maneuvers – 10

DETECTION

Flexible Framework for Capacitive Sensing – 27

Operation of a Cartesian Robotic System in a Compact Microscope with Intelligent Controls – 51

Provision Of Carbon Nanotube Bucky Paper Cages For Immune Shielding Of Cells, Tissues, and Medical Devices – 48

System and Method for Detecting Cracks and their Location – 47

DETECTORS

Cadmium-Zinc-Telluride Detectors – 40

DIAGNOSIS

System for Solving Diagnosis and Hitting Set Problems – 50

DIELECTRICS

Radio-Frequency Driven Dielectric Heaters for Non-Nuclear Testing in Nuclear Core Development – 55

DIGITAL CAMERAS

Encrypting Digital Camera with Automatic Encryption Key Deletion – 38

DIGITAL TECHNIQUES

Investigation of Destroyed Assemblies and Identification of Components Thereof Using Texture Mapping – 50

DISPERSING

Production of Stable Aqueous Dispersions of Carbon Nanotubes Government Interests – 54

DISPLAY DEVICES

Information Display System for Atypical Flight Phase – 2

Intelligent Weather Agent – 43

DISSIPATION

Charge Dissipative Electrical Interconnect – 30

DRILLING

Self Mountable and Extractable Ultrasonic/Sonic Anchor – 44

DURABILITY

Space Environmentally Durable Polyimides and Copolyimides – 23

DYNAMIC RANGE

Motor Controller System For Large Dynamic Range of Motor Operation – 42

EFFICIENCY

Series Connected Buck-Boost Regulator – 28

ELECTRIC CONDUCTORS

Carbon Nanotube-based Sensor and Method for Continually Sensing Changes in a Structure – 36

ELECTRIC CONNECTORS

Series Connected Buck-Boost Regulator – 31

ELECTRIC CONTACTS

Charge Dissipative Electrical Interconnect – 30

ELECTRIC POTENTIAL

Series Connected Buck-Boost Regulator – 28

ELECTRICAL ENGINEERING

Flexible Framework for Capacitive Sensing – 27

Magnetic Field Response Measurement Acquisition System – 30

Series Connected Buck-Boost Regulator – 31

ELECTRICAL RESISTIVITY

Flexible Framework for Capacitive Sensing – 27

ELECTROCHEMISTRY

Variable Temperature Test Cell and Associated Method – 21

ELECTRODES

Perfluoroalkanesulfonic Acides and Perfluoroalkanesulfonimides as Electrode Additives for Fuel Cells – 24

ELECTRODYNAMICS

Electrodynamic Tether – 13

ELECTROMECHANICAL DEVICES

Hybrid Elecromechanical Actuator and Actuation System – 33

ELECTRONICS

Evolutionary Technique for Automated Synthesis of Electronic Circuits – 35

ELLIPTIC DIFFERENTIAL EQUATIONS

Enhanced Elliptic Grid Generation – 53

ELLIPTICITY

Enhanced Elliptic Grid Generation – 53

ENCAPSULATING

Carbon Nanotube Interconnect – 28

ENERGY GAPS (SOLID STATE)

Gap/silicon Tandem Solar Cell with Extended Temperature Range – 58

ENGINE NOISE

Airfoil Surface Impedance Modification for Noise Reduction in Turbofan Engines – 5

Nonlinearly Stacked Low Noise Turbofan Stator – 9

EQUATIONS OF STATE

Systems, Methods and Apparatus for Determining Physical Properties of Fluids – 45

ESTIMATING

Energy Index For Aircraft Maneuvers – 10

Global Radius of Curvature Estimation and Control System for Segmented Mirrors – 42

EXHAUST EMISSION

Reduced Exhaust Emissions Gas Turbine Engine Combustor – 9

EXHAUST GASES

Channel-wing System for Thrust Deflection and Force/Moment Generation – 11

FABRICATION

Carbon Nanotube Interconnect – 28

Method of Fabricating a Composite Apparatus – 17

Microscale Out-Of-Plane Anemometer – 38

Systems and Methods for Fabricating Thin Films – 57

FASTENERS

Superconductive Contacts with Hydroxide-catalyzed Bonds that Retain Superconductivity and Provide Mechanical Fastening Strength – 32

FIBER LASERS

Fiber Coupled Laser Diodes with Even Illumination Pattern – 40

FIBER OPTICS

Fiber Coupled Laser Diodes with Even Illumination Pattern – 40

FIBERS

Method of Fabricating a Composite Apparatus – 17

FLIGHT CHARACTERISTICS

Historical Analysis of Aircraft Flight Parameters – 3

FLIGHT CONTROL

Flight Control Actuation System – 6

Method and Apparatus for Loss of Control Inhibitor Systems – 7

FLIGHT INSTRUMENTS

Real Time Analysis and Display of Aircraft Approach Maneuvers – 8

FLIGHT MANAGEMENT SYSTEMS

Real Time Analysis and Display of Aircraft Approach Maneuvers – 8

FLIGHT OPERATIONS

Information Display System for Atypical Flight Phase – 2

FLIGHT PATHS

Real Time Analysis and Display of Aircraft Approach Maneuvers – 8

FLOW COEFFICIENTS

Balanced Orifice Plate – 22

FLUID FLOW

Acoustic Seal – 54

Balanced Orifice Plate – 21

FLUIDS

Systems, Methods and Apparatus for Determining Physical Properties of Fluids – 45

FOAMS

Multifunctional Cryo-Insulation Apparatus and Methods – 24

FOLDING STRUCTURES

Depolyable Structural Assemblies, Systems for Deploying Such Structural Assemblies and Related Methods – 47

FOLDING

Device and Method for Connections Made Between a Crimp Connector and Wire – 37

FREE-SPACE OPTICAL COMMUNICATION

Lincoln Distributed Optical Receiver Array – 26

FREQUENCY MULTIPLIERS

Interrupt-based Phase-locked Frequency Multiplier – 42

FUEL CELLS

Perfluoroalkanesulfonic Acides and Perfluoroalkanesulfonimides as Electrode Additives for Fuel Cells – 24

FULLERENES

Macroscopic Ordered Assembly of Carbon Nanotubes – 22

GAS STREAMS

Channel-wing System for Thrust Deflection and Force/Moment Generation – 11

GAS TURBINE ENGINES

Endwall Treatment and Method for Gas Turbine – 8

Reduced Exhaust Emissions Gas Turbine Engine Combustor – 9

GAS TURBINES

Endwall Treatment and Method for Gas Turbine – 8

GEARS

High Ratio, Reduced Size Epicyclic Gear Transmission for Rotary Wing Aircraft with Improved Safety and Noise Reduction – 6

GELS

Polyurea Aerogels – 16

GENE EXPRESSION

Provision Of Carbon Nanotube Bucky Paper Cages For Immune Shielding Of Cells, Tissues, and Medical Devices – 49

GLASS TRANSITION TEMPERATURE

Space Environmentally Durable Polyimides and Copolyimides – 14

GRID GENERATION (MATHEMATICS)

Enhanced Elliptic Grid Generation – 53

HEATERS

Radio-Frequency Driven Dielectric Heaters for Non-Nuclear Testing in Nuclear Core Development – 55

HIGH CURRENT

Carbon Nanotube Interconnect – 28

HIGH PRESSURE

Composite Materials Containing a Nanostructured Carbon Binder Phase and High Pressure Process for Making the Same – 19

HIGH VOLTAGES

Low Power, High Voltage Power Supply with Fast Rise/Fall Time – 36

HISTORIES

Historical Analysis of Aircraft Flight Parameters – 3

HOLDERS

Powder Handling Device for Analytical Instruments – 44

HUBS

Endwall Treatment and Method for Gas Turbine – 8

HYDROGEN PEROXIDE

Concentration of Hydrogen Peroxide – 20

HYDROXIDES

Superconductive Contacts with Hydroxide-catalyzed Bonds that Retain Superconductivity and Provide Mechanical Fastening Strength – 32

IDENTIFYING

Operation of a Cartesian Robotic System in a Compact Microscope with Intelligent Controls – 51

System and Method for Detecting Cracks and their Location – 47

IMAGE PROCESSING

Operation of a Cartesian Robotic System in a Compact Microscope with Intelligent Controls – 51

INDUCTORS

Magnetic Field Response Sensor For Conductive Media – 29

INFORMATION SYSTEMS

Information Display System for Atypical Flight Phase – 2

INFRARED FILTERS

Mesoporous Silicon Infrared Filters and Methods of Making Same – 32

INSULATION

Metallic Nanowire Interconnections for Integrated Circuit Fabrication – 37

Multifunctional Cryo-Insulation Apparatus and Methods – 23

INTEGRATED CIRCUITS

Metallic Nanowire Interconnections for Integrated Circuit Fabrication – 37

Solar Cell Mechanical Interconnection Using Direct Wafer Bonding – 48

INTERLAYERS

Laser-Induced Fabrication of Metallic Interlayers and Patterns in Polyimide Films – 15

INTERPOLATION

Method for Constructing Composite Response Surfaces by Combining Neural Networks with Polynomial Interpolation or Estimation Techniques – 11

INTERRUPTION

Interrupt-based Phase-locked Frequency Multiplier – 42

JET AIRCRAFT NOISE

Airfoil Surface Impedance Modification for Noise Reduction in Turbofan Engines – 5

JOSEPHSON JUNCTIONS

Charge Dissipative Dielectric for Cryogenic Devices – 34

KINETIC ENERGY

Energy Index For Aircraft Maneuvers – 10

LASER OUTPUTS

Fiber Coupled Laser Diodes with Even Illumination Pattern – 40

LEADING EDGES

Channel-wing System for Thrust Deflection and Force/Moment Generation – 11

Slotted Aircraft Wing – 4

LIGHT (VISIBLE RADIATION)

Carbon Nanotube Based Light Sensor – 30

LITHIUM BATTERIES

Carbon Materials Metal/Metal Oxide Nanoparticle Composite and Battery Anode Composed of the Same – 16

LOW NOISE

Nonlinearly Stacked Low Noise Turbofan Stator – 9

LOW VOLTAGE

Low Power, High Voltage Power Supply with Fast Rise/Fall Time – 36

MAGNETIC COOLING

Passive Gas-Gap Heat Switch for Adiabatic Demagnetization Refrigerator – 56

MAGNETIC FIELDS

Magnetic Field Response Measurement Acquisition System – 30

Magnetic Field Response Sensor For Conductive Media – 28

Magnetic Suspension and Drive System for Rotating Equipment – 45

Passive Gas-Gap Heat Switch for Adiabatic Demagnetization Refrigerator – 56

MAGNETIC SUSPENSION

Magnetic Suspension and Drive System for Rotating Equipment – 46

MANEUVERS

Method, Apparatus and Computer Program Product for Safe Exit Maneuver from Dimensionally Extended Rotating Space Vehicle – 13

MANUFACTURING

Double Vacuum Bag Process for Resin Matrix Composite Manufacturing – 17

Process for the Manufacture of Composite Structures – 18

MATERIALS TESTS

Variable Temperature Test Cell and Associated Method – 21

MATHEMATICAL MODELS

Enhanced Elliptic Grid Generation – 53

MATRIX METHODS

Continuous Organic and Inorganic Matrix Composite Fibrils and Methods for Their Production from Carbon Nanotubes – 14

MEASURING INSTRUMENTS

Magnetic Field Response Measurement Acquisition System – 39

Powder Handling Device for Analytical Instruments – 44

MECHANICAL DEVICES

Powder Handling Device for Analytical Instruments – 44

Self-Calibrating Pressure Transducer – 41

MECHANICAL DRIVES

Magnetic Suspension and Drive System for Rotating Equipment – 46

MECHANICAL ENGINEERING

Self-Calibrating Pressure Transducer – 41

MECHANICAL PROPERTIES

Mesoporous Silicon Infrared Filters and Methods of Making Same – 32

MEDIATION

Sensory Ego-Sphere: A Mediating Interface between Sensors and Cognition – 53

MEDICAL EQUIPMENT

Provision Of Carbon Nanotube Bucky Paper Cages For Immune Shielding Of Cells, Tissues, and Medical Devices – 49

MEMBRANES

Bucky Paper as a Support Membrane in Retinal Cell Transplantation – 49

METAL FILMS

Laser-Induced Fabrication of Metallic Interlayers and Patterns in Polyimide Films – 15

METAL OXIDES

Carbon Materials Metal/Metal Oxide Nanoparticle Composite and Battery Anode Composed of the Same – 16

METAL PLATES

Balanced Orifice Plate – 22

METALLIZING

Laser-Induced Fabrication of Metallic Interlayers and Patterns in Polyimide Films – 15

METALS

Metallic Nanowire Interconnections for Integrated Circuit Fabrication – 37

METHODOLOGY

Carbon Nanotube-based Sensor and Method for Continually Sensing Changes in a Structure – 36

Concentration of Hydrogen Peroxide – 19

Systems and Methods for Producing Single-walled Carbon Nanotubes (SWNTS) on a Substrate – 14

METHYL ALCOHOL

Perfluoroalkanesulfonic Acides and Perfluoroalkanesulfonimides as Electrode Additives for Fuel Cells – 24

MICROELECTROMECHANICAL SYSTEMS

MEMS Based Acoustic Array – 55

Microwave Bonding of MEMS Component – 32

MICROELECTRONICS

Solar Cell Mechanical Interconnection Using Direct Wafer Bonding – 48

MICROMACHINING

Microscale Out-Of-Plane Anemometer – 38

MICROPHONES

MEMS Based Acoustic Array – 55

MICROSCOPY

Operation of a Cartesian Robotic System in a Compact Microscope with Intelligent Controls – 51

MICROWAVES

Microwave Bonding of MEMS Component – 33

MOLDS

Double Vacuum Bag Process for Resin Matrix Composite Manufacturing – 17

MOUNTING

Self Mountable and Extractable Ultrasonic/Sonic Anchor – 44

NANOFABRICATION

Metallic Nanowire Interconnections for Integrated Circuit Fabrication – 37

NANOPARTICLES

Carbon Materials Metal/Metal Oxide Nanoparticle Composite and Battery Anode Composed of the Same – 16

NANOSTRUCTURE (CHARACTERISTICS)

Templated Growth of Carbon Nanotubes – 18

NANOSTRUCTURE GROWTH

Continuous Organic and Inorganic Matrix Composite Fibrils and Methods for Their Production from Carbon Nanotubes – 14

Production of Stable Aqueous Dispersions of Carbon Nanotubes Government Interests – 54

Templated Growth of Carbon Nanotubes – 18

NANOTECHNOLOGY

Macroscopic Ordered Assembly of Carbon Nanotubes – 22

Metallic Nanowire Interconnections for Integrated Circuit Fabrication – 37

NANOWIRES

Metallic Nanowire Interconnections for Integrated Circuit Fabrication – 37

NEURAL NETS

Method for Constructing Composite Response Surfaces by Combining Neural Networks with Polynomial Interpolation or Estimation Techniques – 11

Optimization of Training Sets For Neural-Net Processing of Characteristic Patterns From Vibrating Solids – 52

NITRIC OXIDE

UV Induced Oxidation of Nitric Oxide – 20

NOISE REDUCTION

Airfoil Surface Impedance Modification for Noise Reduction in Turbofan Engines – 5

High Ratio, Reduced Size Epicyclic Gear Transmission for Rotary Wing Aircraft with Improved Safety and Noise Reduction – 6

NUCLEAR ENERGY

Radio-Frequency Driven Dielectric Heaters for Non-Nuclear Testing in Nuclear Core Development – 55

OPTICAL DATA STORAGE MATERIALS

Fast Erase Method and Apparatus For Digital Media – 59

OPTICAL DISKS

Fast Erase Method and Apparatus For Digital Media – 59

OPTICAL WAVEGUIDES

Vertically-coupled Whispering Gallery Mode Resonator Optical Waveguide, and Methods – 56

OPTIMIZATION

Optimization of Training Sets For Neural-Net Processing of Characteristic Patterns From Vibrating Solids – 52

ORIFICES

Balanced Orifice Plate – 22

OXIDATION

UV Induced Oxidation of Nitric Oxide – 20

PATENT APPLICATIONS

Charge Dissipative Electrical Interconnect – 30

Depolyable Structural Assemblies, Systems for Deploying Such Structural Assemblies and Related Methods – 47

Nanoengineered Thermal Materials Based on Carbon Nanotube Array Composites – 15

Sensory Ego-Sphere: A Mediating Interface between Sensors and Cognition – 52

Time of Flight System on a Chip – 12

PERFORMANCE TESTS

Variable Temperature Test Cell and Associated Method – 21

PHASE LOCKED SYSTEMS

Interrupt-based Phase-locked Frequency Multiplier – 42

PHASE MODULATION

Real-time Signal-to-noise Ratio (SNR) Estimation for BPSK and QPSK Modulation Using the Active Communications Channel – 26

PHOTOGRAMMETRY

Method for Correcting Control Surface Angle Measurements in Single Viewpoint Photogrammetry – 4

PIEZOELECTRICITY

Method of Fabricating a Composite Apparatus – 17

PILOT SUPPORT SYSTEMS

Real Time Analysis and Display of Aircraft Approach Maneuvers – 8

PIPES (TUBES)

Balanced Orifice Plate – 22

PLASMONS

Multi-Functional Plasmon-Resonant Contrast Agents for Optical Coherence Tomography – 58

POLLUTION CONTROL

Reduced Exhaust Emissions Gas Turbine Engine Combustor – 9

POLYIMIDES

Laser-Induced Fabrication of Metallic Interlayers and Patterns in Polyimide Films – 15

Space Environmentally Durable Polyimides and Copolyimides – 14

Space Environmentally Durable Polyimides and Copolyimides – 23

POLYMER CHEMISTRY

Polyurea Aerogels – 16

POLYNOMIALS

Method for Constructing Composite Response Surfaces by Combining Neural Networks with Polynomial Interpolation or Estimation Techniques – 11

POSITION (LOCATION)

System and Method for Detecting Cracks and their Location – 48

POSITION

System and Method for Detecting Cracks and their Location – 48

POTENTIAL ENERGY

Energy Index For Aircraft Maneuvers – 10

POWDER (PARTICLES)

Powder Handling Device for Analytical Instruments – 44

POWER SUPPLIES

Low Power, High Voltage Power Supply with Fast Rise/Fall Time – 36

PRESSURE SENSORS

Self-Calibrating Pressure Transducer – 41

PROBLEM SOLVING

System for Solving Diagnosis and Hitting Set Problems – 50

PROPELLANT TANKS

Multifunctional Cryo-Insulation Apparatus and Methods – 24

PROPELLERS

Channel-wing System for Thrust Deflection and Force/Moment Generation – 11

PROTECTIVE COATINGS

Thermal Resistant Environmental Barrier Coating – 16

PROTEINS

Provision Of Carbon Nanotube Bucky Paper Cages For Immune Shielding Of Cells, Tissues, and Medical Devices – 49

PULSE COMMUNICATION

Interrupt-based Phase-locked Frequency Multiplier – 42

QUADRATURE PHASE SHIFT KEYING

Real-time Signal-to-noise Ratio (SNR) Estimation for BPSK and QPSK Modulation Using the Active Communications Channel – 26

RADII

Global Radius of Curvature Estimation and Control System for Segmented Mirrors – 43

RADIO FREQUENCIES

Magnetic Field Response Sensor For Conductive Media – 29

Radio-Frequency Driven Dielectric Heaters for Non-Nuclear Testing in Nuclear Core Development – 55

REAL TIME OPERATION

Real Time Analysis and Display of Aircraft Approach Maneuvers – 8

RECEIVERS

Lincoln Distributed Optical Receiver Array – 26

REFRIGERATORS

Passive Gas-Gap Heat Switch for Adiabatic Demagnetization Refrigerator – 56

REGULATORS

Series Connected Buck-Boost Regulator – 28

REMOTE CONTROL

Operation of a Cartesian Robotic System in a Compact Microscope with Intelligent Controls – 51

RESIN MATRIX COMPOSITES

Double Vacuum Bag Process for Resin Matrix Composite Manufacturing – 17

RESONANCE

Magnetic Field Response Measurement Acquisition System – 39

RESONATORS

Acoustic Seal – 54

Vertically-coupled Whispering Gallery Mode Resonator Optical Waveguide, and Methods – 56

RETINA

Bucky Paper as a Support Membrane in Retinal Cell Transplantation – 49

ROBOT CONTROL

Architecture for Robot Intelligence – 52

ROBOTICS

Architecture for Robot Intelligence – 52

Operation of a Cartesian Robotic System in a Compact Microscope with Intelligent Controls – 51

ROBOTS

Architecture for Robot Intelligence – 52

Sensory Ego-Sphere: A Mediating Interface between Sensors and Cognition – 52

ROTARY WING AIRCRAFT

High Ratio, Reduced Size Epicyclic Gear Transmission for Rotary Wing Aircraft with Improved Safety and Noise Reduction – 6

ROTATING BODIES

Method, Apparatus and Computer Program Product for Safe Exit Maneuver from Dimensionally Extended Rotating Space Vehicle – 13

ROTATING SHAFTS

Motor Controller System For Large Dynamic Range of Motor Operation – 42

ROTORS

Endwall Treatment and Method for Gas Turbine – 8

SAFETY

High Ratio, Reduced Size Epicyclic Gear Transmission for Rotary Wing Aircraft with Improved Safety and Noise Reduction – 6

SATELLITE COMMUNICATION

Lincoln Distributed Optical Receiver Array – 26

SEALING

Acoustic Seal – 54

SEGMENTED MIRRORS

Global Radius of Curvature Estimation and Control System for Segmented Mirrors – 43

SEMICONDUCTOR DEVICES

Nanoengineered Thermal Materials Based on Carbon Nanotube Array Composites – 15

SEMICONDUCTOR JUNCTIONS

Gap/silicon Tandem Solar Cell with Extended Temperature Range – 58

SEMICONDUCTOR LASERS

Fiber Coupled Laser Diodes with Even Illumination Pattern – 40

SENSORS

Cadmium-Zinc-Telluride Detectors – 40

Carbon Nanotube Based Light Sensor – 30

Carbon Nanotube-based Sensor and Method for Continually Sensing Changes in a Structure – 35

Magnetic Field Response Measurement Acquisition System – 30

SENSORY PERCEPTION

Self-activating System and Method for Alerting When an Object or a Person is Left Unattended – 29

SHAFTS (MACHINE ELEMENTS)

Motor Controller System For Large Dynamic Range of Motor Operation – 42

SHEAR STRENGTH

Macroscopic Ordered Assembly of Carbon Nanotubes – 22

SIGNAL PROCESSING

Motor Controller System For Large Dynamic Range of Motor Operation – 42

Time-Mode Analog Computation Circuits and Methods – 34

SIGNAL TO NOISE RATIOS

Real-time Signal-to-noise Ratio (SNR) Estimation for BPSK and QPSK Modulation Using the Active Communications Channel – 26

SILICON DIOXIDE

Templated Growth of Carbon Nanotubes – 18

SILICON

Mesoporous Silicon Infrared Filters and Methods of Making Same – 32

Thermal Resistant Environmental Barrier Coating – 16

SLOTS

Channel-wing System for Thrust Deflection and Force/Moment Generation – 11

Slotted Aircraft Wing – 3

SOLAR CELLS

Gap/silicon Tandem Solar Cell with Extended Temperature Range – 58

Solar Cell Mechanical Interconnection Using Direct Wafer Bonding – 48

SOLID STATE

Variable Temperature Test Cell and Associated Method – 21

SOLIDS

Optimization of Training Sets For Neural-Net Processing of Characteristic Patterns From Vibrating Solids – 52

SOLVENTS

Space Environmentally Durable Polyimides and Copolyimides – 14

SOUND GENERATORS

Acoustic Seal – 54

SOUND WAVES

Acoustic Seal – 54

SPACE COMMUNICATION

Lincoln Distributed Optical Receiver Array – 26

SPACECRAFT CONSTRUCTION MATERIALS

Space Environmentally Durable Polyimides and Copolyimides – 23

SPECIFIC HEAT

Method and Apparatus for the Portable Identification Of Material Thickness And Defects Along Uneven Surfaces Using Spatially Controlled Heat Application – 25

SPHERES

Operation of a Cartesian Robotic System in a Compact Microscope with Intelligent Controls – 51

Sensory Ego-Sphere: A Mediating Interface between Sensors and Cognition – 52

SQUID (DETECTORS)

Charge Dissipative Dielectric for Cryogenic Devices – 34

STAGNATION POINT

Stagnation Point Reverse Flow Combustor for a Combustion System – 46

STATIONKEEPING

Method, Apparatus and Computer Program Product for Safe Exit Maneuver from Dimensionally Extended Rotating Space Vehicle – 13

STATORS

Nonlinearly Stacked Low Noise Turbofan Stator – 9

STEM CELLS

Bucky Paper as a Support Membrane in Retinal Cell Transplantation – 49

STOICHIOMETRY

Space Environmentally Durable Polyimides and Copolyimides – 14

STRUCTURAL DESIGN

Depolyable Structural Assemblies, Systems for Deploying Such Structural Assemblies and Related Methods – 47

STRUCTURAL STRAIN

System and Method for Detecting Cracks and their Location – 48

SUBSTRATES

Carbon Nanotube Based Light Sensor – 30

Systems and Methods for Producing Single-walled Carbon Nanotubes (SWNTS) on a Substrate – 14

Thermal Resistant Environmental Barrier Coating – 16

SUPERCONDUCTIVITY

Charge Dissipative Dielectric for Cryogenic Devices – 34

Superconductive Contacts with Hydroxide-catalyzed Bonds that Retain Superconductivity and Provide Mechanical Fastening Strength – 32

SURFACE LAYERS

Laser-Induced Fabrication of Metallic Interlayers and Patterns in Polyimide Films – 15

SURFACE PROPERTIES

Airfoil Surface Impedance Modification for Noise Reduction in Turbofan Engines – 5

SWEPT WINGS

Slotted Aircraft Wing – 4

SWITCHES

Passive Gas-Gap Heat Switch for Adiabatic Demagnetization Refrigerator – 56

Series Connected Buck-Boost Regulator – 28

SYNTHESIS

Evolutionary Technique for Automated Synthesis of Electronic Circuits – 35

SYSTEMS ANALYSIS

Compression of a Data Stream by Selection among a Set of Compression Tools – 51

SYSTEMS ENGINEERING

Intelligent Weather Agent – 43

SYSTEMS HEALTH MONITORING

Systems, Methods and Apparatus for Determining Physical Properties of Fluids – 45

SYSTEMS-ON-A-CHIP

Time of Flight System on a Chip – 12

TAKEOFF

Energy Index For Aircraft Maneuvers – 10

TEMPERATURE DISTRIBUTION

Gap/silicon Tandem Solar Cell with Extended Temperature Range – 58

TETHERING

Electrodynamic Tether – 13

Self-activating System and Method for Alerting When an Object or a Person is Left Unattended – 29

THERMAL CONTROL COATINGS

Thermal Resistant Environmental Barrier Coating – 16

THERMAL RESISTANCE

Thermal Resistant Environmental Barrier Coating – 16

THERMAL STABILITY

Space Environmentally Durable Polyimides and Copolyimides – 14

THERMODYNAMIC PROPERTIES

Systems, Methods and Apparatus for Determining Physical Properties of Fluids – 45

THICKNESS

Method and Apparatus for the Portable Identification Of Material Thickness And Defects Along Uneven Surfaces Using Spatially Controlled Heat Application – 25

THIN FILMS

Charge Dissipative Dielectric for Cryogenic Devices – 34

Space Environmentally Durable Polyimides and Copolyimides – 14

Space Environmentally Durable Polyimides and Copolyimides – 23

Systems and Methods for Fabricating Thin Films – 57

THRUST

Channel-wing System for Thrust Deflection and Force/Moment Generation – 11

Electrodynamic Tether – 13

TIME MEASUREMENT

Historical Analysis of Aircraft Flight Parameters – 3

TIMING DEVICES

Self-activating System and Method for Alerting When an Object or a Person is Left Unattended – 29

TOMOGRAPHY

Multi-Functional Plasmon-Resonant Contrast Agents for Optical Coherence Tomography – 58

TOOLS

Device and Method for Connections Made Between a Crimp Connector and Wire – 37

TRAILING EDGES

Channel-wing System for Thrust Deflection and Force/Moment Generation – 11

Slotted Aircraft Wing – 4

TRANSMISSIONS (MACHINE ELEMENTS)

High Ratio, Reduced Size Epicyclic Gear Transmission for Rotary Wing Aircraft with Improved Safety and Noise Reduction – 6

TRANSMISSIVITY

Magnetic Field Response Sensor For Conductive Media – 29

TRANSMITTER RECEIVERS

Self-activating System and Method for Alerting When an Object or a Person is Left Unattended – 29

TRANSPLANTATION

Bucky Paper as a Support Membrane in Retinal Cell Transplantation – 49

TURBOFAN ENGINES

Airfoil Surface Impedance Modificaton for Noise Reduction in Turbofan Engines – 5

TURBOFANS

Nonlinearly Stacked Low Noise Turbofan Stator – 9

ULTRASONICS

Device and Method for Connections Made Between a Crimp Connector and Wire – 37

Self Mountable and Extractable Ultrasonic/Sonic Anchor – 44

ULTRAVIOLET RADIATION

UV Induced Oxidation of Nitric Oxide – 20

UREAS

Polyurea Aerogels – 16

VACUUM

Double Vacuum Bag Process for Resin Matrix Composite Manufacturing – 17

VANES

Nonlinearly Stacked Low Noise Turbofan Stator – 9

VIBRATION

Optimization of Training Sets For Neural-Net Processing of Characteristic Patterns From Vibrating Solids – 52

VIDEO DATA

Encrypting Digital Camera with Automatic Encryption Key Deletion – 38

VOLTAGE REGULATORS

Low Power, High Voltage Power Supply with Fast Rise/Fall Time – 36

VOLUME

Systems, Methods and Apparatus for Determining Physical Properties of Fluids – 45

VORTEX ALLEVIATION

Trailing Vortex Management via Boundary Layer Separation Control – 1

VORTEX FLAPS

Trailing Vortex Management via Boundary Layer Separation Control – 1

VORTEX SHEETS

Trailing Vortex Management via Boundary Layer Separation Control – 1

WAFERS

Solar Cell Mechanical Interconnection Using Direct Wafer Bonding – 48

WALLS

Macroscopic Ordered Assembly of Carbon Nanotubes – 22

Method and Apparatus for the Portable Identification Of Material Thickness And Defects Along Uneven Surfaces Using Spatially Controlled Heat Application – 25

WARNING SYSTEMS

Self-activating System and Method for Alerting When an Object or a Person is Left Unattended – 29

WEATHER

Intelligent Weather Agent – 43

WHISPERING GALLERY MODES

Vertically-coupled Whispering Gallery Mode Resonator Optical Waveguide, and Methods – 56

WINGS

Slotted Aircraft Wing – 3

WIRE

Device and Method for Connections Made Between a Crimp Connector and Wire – 37

ZINC TELLURIDES

Cadmium-Zinc-Telluride Detectors – 40

Personal Author Index

- Aiken, Daniel**
Solar Cell Mechanical Interconnection Using Direct Wafer Bonding – 48
- Ainsworth, Robert J.**
Energy Index For Aircraft Maneuvers – 10
- Alhorn, Dean C.**
Motor Controller System For Large Dynamic Range of Motor Operation – 41
- Ali, A. A.**
Continuous Organic and Inorganic Matrix Composite Fibrils and Methods for Their Production from Carbon Nanotubes – 14
- Amidan, Brett G.**
Energy Index For Aircraft Maneuvers – 10
Historical Analysis of Aircraft Flight Parameters – 2
Information Display System for Atypical Flight Phase – 2
- Andrei, Adi**
Information Display System for Atypical Flight Phase – 2
- Arlid, Bertelrud**
Compression of a Data Stream by Selection among a Set of Compression Tools – 50
- Arnold, David P.**
MEMS Based Acoustic Array – 55
- Ballance, Judy L.**
Electrodynamic Tether – 13
- Bar-Cohen, Yoseph**
Self Mountable and Extractable Ultrasonic/Sonic Anchor – 44
- Bard, Richard D., Jr.**
Investigation of Destroyed Assemblies and Identification of Components Thereof Using Texture Mapping – 50
- Barmatz, M. B.**
Microwave Bonding of MEMS Component – 32
- Barrows, Danny A.**
Method for Correcting Control Surface Angle Measurements in Single Viewpoint Photogrammetry – 4
- Beamesdefer, Michael A.**
Systems and Methods for Fabricating Thin Films – 57
- Bearden, Douglas B.**
Low Power, High Voltage Power Supply with Fast Rise/Fall Time – 36
- Bhatia, Tania**
Thermal Resistant Environmental Barrier Coating – 16
- Birchenough, Arthur G.**
Series Connected Buck-Boost Regulator – 28
- Bitteker, Leo**
Radio-Frequency Driven Dielectric Heaters for Non-Nuclear Testing in Nuclear Core Development – 55
- Blake, David F.**
Powder Handling Device for Analytical Instruments – 44

Public Availability of Copies of Patents

Copies of U.S. patents may be purchased directly from the U.S. Patent and Trademark Office, Washington, D.C. 20231 at \$3.00 per copy. When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, preferably by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the Patent and Trademark Office.

Copies of U.S. patents may also be purchased online from the U.S. Patent and Trademark Office at <http://www.uspto.gov>. Patents also may be viewed online free of charge at the Web site.

Licenses for Commercial Use: Inquiries and Applications for License

NASA inventions abstracted in this bibliography are generally available for nonexclusive or exclusive licensing in accordance with the Department of Commerce Patent License Regulations (37 CFR Part 404). However, the availability for licensing of individual inventions may have changed since the publication of this bibliography. Applications for licensing NASA patents must be submitted in writing to the Patent Counsel of the NASA installation having cognizance of the specific invention. All NASA patent licenses shall be by express written instruments executed by the NASA General Counsel.

Inquiries concerning the NASA Patent Licensing Program or the availability of licenses for the commercial use of NASA-owned inventions covered by U.S. patents or pending applications for patent should be forwarded to the NASA Patent Counsel of the NASA installation having cognizance of the specific invention, or the Associate General Counsel for Intellectual Property, Commercial and International Law, National Aeronautics and Space Administration, Washington, D.C. 20546. Inquiries should refer to the NASA Case Number, the Title of the Invention, and the U.S. Patent Number assigned to the invention as shown in this bibliography. Patent applications available for licensing are periodically advertised in the Federal Register.

The NASA Patent Counsel having cognizance of the invention is determined by the first three letters or prefix of the NASA Case Number assigned to the invention. The addresses and contact numbers for NASA Patent Counsels are listed alongside the NASA Case Number prefix letters as follows:

Center Patent Counsels

HQN-xxxxx NASA Headquarters
Suite No. 9W39-C, 300 E Street SW
Washington, DC 20546-0001
Phone: 202-358-2041
Fax: 202-358-4341

ARC-xxxxx Ames Research Center
Mail Code 202A-4
Moffett Field, CA 94035
Phone: 650-604-0887
Fax: 650-604-2767

DRC-xxxxx Dryden Flight Research Center
PO Box 273, Mail Stop 4839
Edwards, CA 93523-0273
No assigned Patent Counsel; services provided by NASA Management Office

LEW-xxxxx Glenn Research Center at Lewis Field
Mail Code 500-118
21000 Brookpark Rd
Cleveland, OH 44135-3191
Phone: 216-433-5756
Fax: 216-433-6790

GSC-xxxxx Goddard Space Flight Center
Mail Code 140.1
Greenbelt, MD 20771-0001
Phone: 301-286-7351
Fax: 301-286-9502

MSC-xxxxx Lyndon B. Johnson Space Center
Mail Code AL
2101 NASA Parkway
Houston, TX 77058-8452
Phone: 281-483-1013
Fax: 281-483-6936

KSC-xxxxx John F. Kennedy Space Center
Mail Code CC-A
Kennedy Space Center, FL 32899-0001
Phone: 321-867-3058
Fax: 321-867-1817

LAR-xxxxx Langley Research Center
Mail Code 141
Hampton, VA 23681-2199
Phone: 757-864-3221
Fax: 757-864-9190

MFS-xxxxx George C. Marshall Space Flight Center
Mail Code LS01
Marshall Space Flight Center, AL 35812-0001
Phone: 256-544-0013
Fax: 256-544-0258

NPO-xxxxx NASA Management Office
Patent Counsel
Mail Code 180-200
4800 Oak Grove Dr
Pasadena, CA 91109
Phone: 818-354-7770
Fax: 818-393-3160

SSC-xxxxx John C. Stennis Space Center
Mail Code HA30
Stennis Space Center, MS 39529-6000
No assigned Patent Counsel; services provided by Kennedy Space Center
