## Weight loss has just become easy!

# SPECIAL EDITION: Looking great without surgery!

"Each morning when I looked in the mirror, I could actually see my body changing."

By Laura Wilkenson, R.N.,  
New York Women's Health Writer

So, why would a successful plastic surgeon assemble a team of researchers to develop a safe, incredibly effective pill for weight loss? What about the women banging on his office door with fists full of money screaming the ubiquitous "L" word—LIPO-SUCTION? Why not just suck it out?! Seems easy . . .

"The route to an attractive appearance is usually not paved by liposuction which can be a very expensive, unpredictable and dangerous surgical procedure. That's why we worked so hard to develop *Zymax*," explains handsome Dr. David Perry, holding a little pink pill in his shiny tweezers. "This powerful formula attacks weight loss in a unique and extremely effective manner. We recognize that unsightly fat deposits are usually very hard to get rid of. Our goal was to make it as simple and as foolproof as possible—almost automatic!"

Instead of the boring pictures of landscapes, beaches and children found in most doctor's offices, Dr. Perry's walls are so full of breathtaking *before* and *after* pictures that you can't even see the wallpaper. As we toured his little "hall of fame," he revealed that most of the perfect bodies displayed were not the result of his skilled scalpel at all—they are the product of the little pink pill called *Zymax*.

## Starvation Dieting Does Not Work

Anyone who has tried going without food knows that crash diets make you feel run down, irritable and just don't work, period. Fat-free foods processed to

have the taste and texture of the yummy stuff (often by adding chemicals with strange sounding names) can actually be unhealthy and ineffective in losing weight.

Dr. Perry explains how *Zymax* approaches our battle-of-the-bulge in a very different way. He adds,

Dr. David Perry, MD

"The first thing we had to do is understand how to promote weight loss by using the body's own natural processes. We know that when you exercise, weight loss usually occurs. So what exactly makes you get

**weight loss began  
just a few hours after taking  
Zymax!**

Dr. D. Perry, MD

lighter when you exercise? Could we reverse engineer this internal process and initiate it pharmaceutically—better yet, naturally? Could we make the body "think" it's exercising? This challenge led us to study *thermogenesis*, the process of biologically "burning" stored fat."

## PRESCRIPTION: Don't Stop Eating Fats!

"Consuming the proper amount of fat is essential to overall health. *Fat-free* is not the answer.

**FAT-FREE=ENERGY-FREE**, which is why you feel so down when you're on a starvation diet. Not good!

"After much hard work, we were finally able to safely increase thermogenesis and quickly promote weight loss," Dr. Perry energetically added. "Patients actually enjoy taking *Zymax* for two reasons: It gives you loads of energy and you lose lots of weight while you still eat!"

## Doctors & Scientists Discover Amazing New Fat Burning Breakthrough

**Increased Thermogenesis Converts Stored Fat Into Pure Energy**

**"There was no question. You could see and feel Zymax working. I noticed it in my hips and thighs after just a few days. It was amazing!"**

**"Weight loss was entirely from FAT. Lean muscle was spared and actually became more visible and defined."**

Dr. David Perry, MD

## **ZyMAX Ups Thermogenesis By 600% The Feeling Is Incredible (And Legal!)**

Dr. Daniel Mowrey, a prominent researcher in the field of obesity says, "... recent developments and understanding of thermogenesis activation may finally be the answer to mankind's oldest question: *"How can I gain control over my weight and still have energy without strenuous exercise or diet regiments?"* This is exciting news for an estimated 88-million Americans (including this writer) that have tried just about everything to lose weight and failed.

**Thermo = Heat & Energy  
genesis = Creation**

To appreciate the amazing benefits of *Zymax*, you need to understand a little about thermogenesis. This is the remarkable mechanism the body uses to produce heat and energy through the burning of calories. And where would we like the calories to come from? Fat, of course!

### **Two Kinds of Fat**

As Dr. Mowrey describes in his respected report on *Activation of Thermogenesis*, there are two kinds of fat in our bodies—similar to the two kinds of cholesterol; good and bad. The good fat is called adipose tissue, or AT for short. AT has a very defined system of blood supply, giving this body component a healthy, reddish appearance.

The bad fat is lumpy and white (as if women didn't know that!)

and called WT for short. WT is what destroys your figure and leaves you with embarrassing cellulite. But there is a solution...

AT has an important role in our metabolism. Its job is to tell the body what to burn at any given moment for energy. There are basically only two choices: WT and what you just ate. For most people, AT chooses the easiest route—burn part of what you just consumed, forcing the rest to be stored as more WT! Think about it, whenever you are overcome with a midday energy lull, what do you do? Have a snack, of course. And the cycle continues as more bad fat, WT is stored in all the wrong places.

**ZyMAX Increases  
Thermogenesis by up to 600%-  
Weight Loss Begins In Minutes!**

The powerful combination of ingredients in Dr. Perry's little pink pill quickly increases metabolic thermogenesis about 600%—similar to that of a teenager. The results are amazing!

First, your body starts burning stored WT fat along with food intake. Weight loss occurs from fat (not just water weight) almost effortlessly.

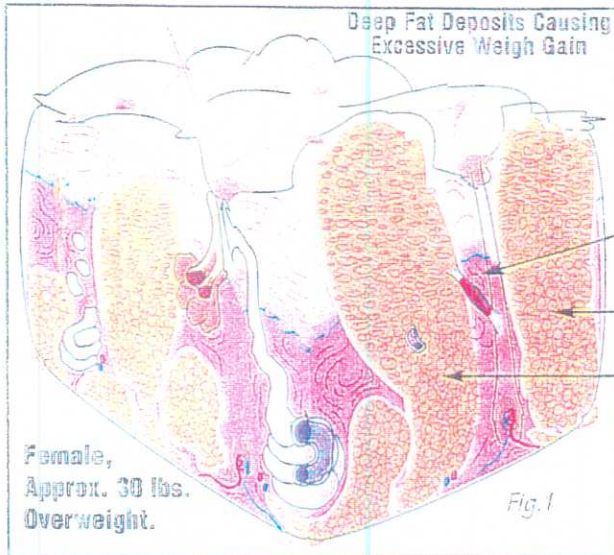

Second, you become full of youthful, natural energy. This is a wonderful feeling that is hard to describe, even as a writer!

**"The increase in energy is almost euphoric. It feels incredibly good."**

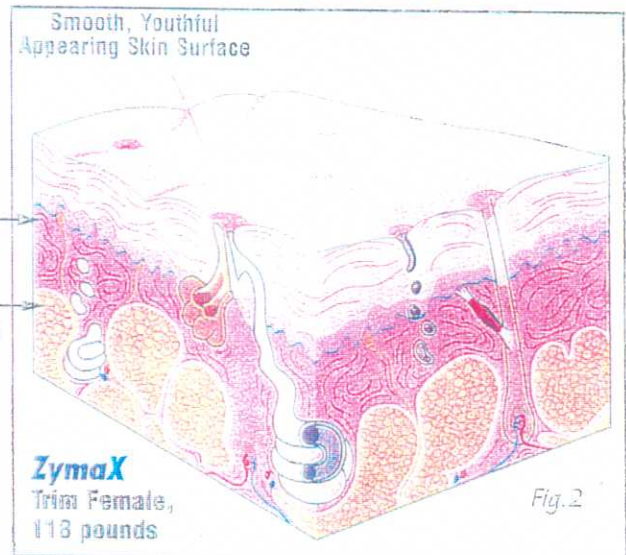

# Clinical Studies Show How ZymaX Finally Ends Useless Dieting!

## MEDICAL ILLUSTRATION OF THIGH AND BUTTOCKS TISSUE

Adipose Tissue (Good Fat)

Lumpy WT Fat (Stored Fat) Can be metabolized into energy.

WT fatty deposits cause skin's surface to bulge. Adipose tissue (good fat) is diminished in proportion to WT. Diet alone would likely be ineffective; plus the yo-yo syndrome often adds to WT deposits throughout body.

ZymaX increases thermogenesis up to 600% and "tells" your metabolism to burn the WT fat first. The result is a very noticeable increase in energy and continuous weight loss. Your body "thinks" it's exercising!

### Clinical Study No. 1

FTC05373

As published in the *Journal of The American College of Nutrition*, researchers conducted a controlled clinical study to determine the weight loss benefits of the ingredients in Zymax. Twenty test subjects with an average age of 35 were randomly assembled into two groups of ten. All were told not to engage in new activities or change their eating habits at all.

Group 1 received the natural thermogenic activators in Zymax before each meal, while Group 2 received a pill that looked like Zymax, but was actually a placebo (fake pill). Though the Group 1 test subjects enjoyed an increase in energy and a heightened feeling of well-being, they were told not to exercise. Patients were excluded if they had any history of hypertension, prostate disease, depression, or thyroid disease.

The results were amazing. Group 1 weight loss over the 1,000 hour test was 6 pounds of body fat—that's an average loss yield of 5.5% of body weight!

Group 2 had little or no appreciable weight loss.

### Clinical Study No. 2

The *International Journal of Obesity* studied several weight loss tablets, most of which failed miserably (sound familiar?).

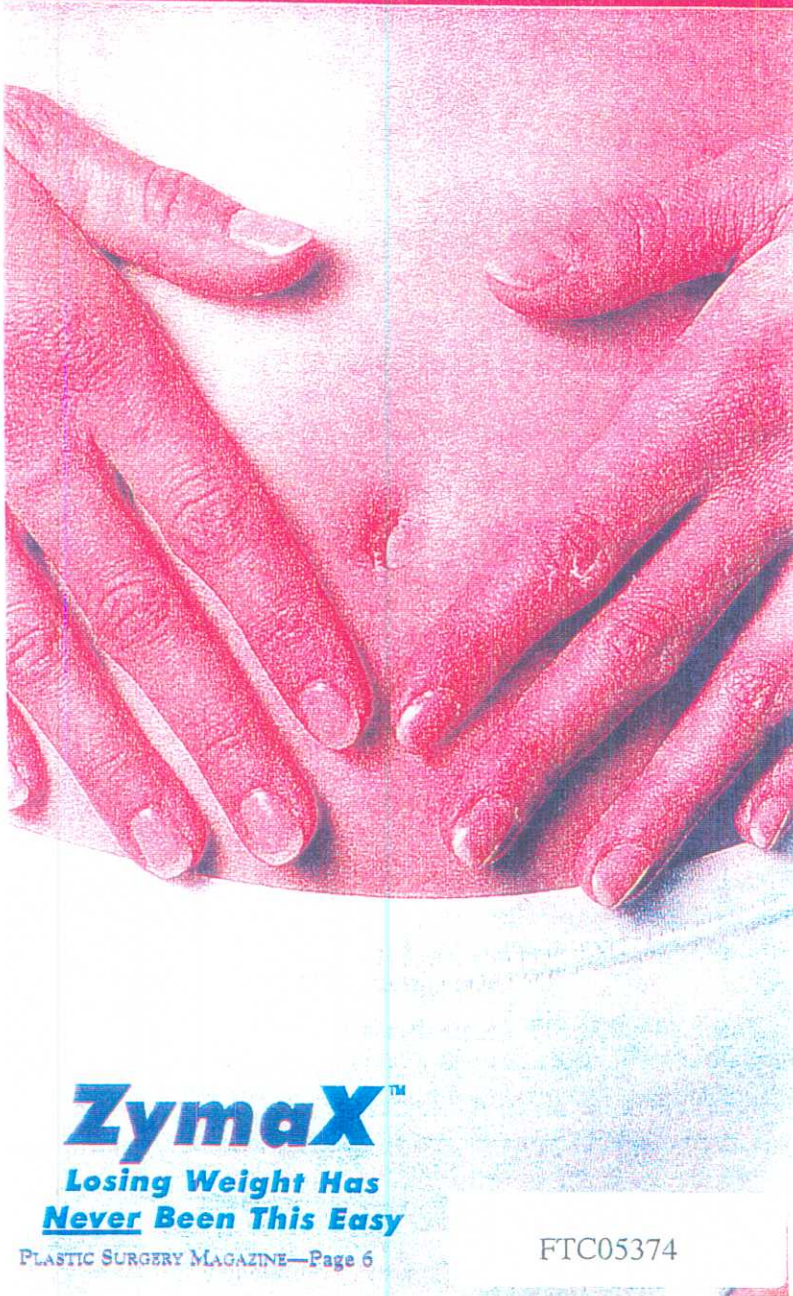

Then they tested the metabolic enhancing components in Zymax. A newspaper ad was used to recruit the 24 subjects, all of which had difficulty losing weight despite prior attempts. Mostly female, all subjects were screened to make sure they were healthy and disease-free. The test was conducted for 8 weeks using the standard randomized double-blind protocol. Since all subjects were aware that the testing had something to do with weight loss, some reduction was expected in the placebo group. In this particular study, exercise was neither encouraged nor discouraged.

**RESULTS:** The group taking the ingredients in Zymax lost 300% more weight than those taking the fake pill. But then the researchers went further—they switched the groups. Those that had not been taking the real ingredients now began to quickly lose weight and caught up with the others. This *cross-over* procedure further validates the efficacy of Zymax!

**"My stomach has never  
been this firm and flat,  
even after weeks of sit-ups.  
Now my husband constantly  
tells me I have a sexy  
figure. I like that!  
Zymax is fantastic!"**

Debbie M., Manhattan, NY

## **Zy~~ma~~X Actually Increases In Effectiveness The Longer You Take It!**

One of the most depressing experiences for those of us who have tried various over-the-counter diet preparations or a fad "eating plan" (should be called a *starving* plan!) is the inevitable plateau when weight loss stops and frustration begins. Typically, this happens because your body begins to "panic" as it is deprived the volume of food it has become accustomed. The results; the dreaded yo-yo syndrome! Dr. Perry explains why this doesn't happen with Zymax.

"Most diet pills, including dangerous *phen-phen*, are designed primarily to curb appetite. This approach does not work for more than a few weeks, and in some cases, just a few days. Your body chemistry is very smart. After all, it is designed to keep us alive!

"When you drastically reduce caloric intake, as directed by the little pamphlets included with most diet pills, your body thinks it's starving to death and goes into preservation mode. Energy becomes conserved and you get that run-down feeling. Your AT is then ultimately instructed to slow down the fat burning process and try to store as much WT as possible. Soon the pills stop working, you're off the diet, and often gain even more weight than when you started! No matter how hard you try, you can't fight Mother Nature!

"The Zymax formula attacks fat differently by pleasantly raising metabolism which leads to release of a naturally occurring substance called norepinephrine (NE). This secretion feels great and goes directly to the AT, instructing the immediate usage of WT (stored fat) for energy. This new energy is fed to the muscle cells, delivering increased strength and endurance. People say this extra energy comes in handy—some even report doing lots of the chores they've been putting off for months, and finally getting into exercise.

"Our bodies seem to enjoy this heightened thermogenesis. Most exciting is that the weight loss process often proportionately increases the longer you use *Zymax*. We see this as an incredible breakthrough in the field of weight management."

# Pharmacist Compares Zymax To Other Weight Loss Products

## Zymax Blows Away The Competition

Cruise the DIET section of any supermarket or drugstore and you'll find dozens of diet pills, meal substitutes, and even a few crazy exercise machines promising to blast your fat away. The back of most women's magazines have ads showing before and after pictures of unbelievable weight loss from some new tea, powder, gadget or potion.

*"Within 15-20 minutes after taking Zymax, people say they experience a welcome burst of energy. Most rave about the intense feeling of well-being that the formula produces."*

Bernard Bubman, Pharmacist

Ok, we understand Dr. Perry's Zymax is different. It's a product of clinical science instead of an advertising agency, and you'll never see Zymax in any store or mail-order magazine advertisement.

### Zymax Not Sold In Stores!

Though Dr. Perry could probably afford to build his

own hospital if he let stores sell his Zymax, the only way you can get these powerful little pink pills is directly from Denman Scientific Research in Vancouver BC, Canada. "Zymax is formulated by a pharmaceutical licensed laboratory under strict quality control. This is not something that can be easily mass produced," adds Dr. Perry. "It's quite complicated."

### Pharmacist Compares Zymax

So how does the pill that challenges liposuction stack up to all the miracles in the war on fat? We decided to ask a registered pharmacist, B. Bubman, to review the Zymax formula and studies, and compare Dr. Perry's new formula approach to the blur of bottles and boxes that line drugstore shelves. Below are his personal findings and his comments.

Dear Dr. Perry:

My husband and I have been taking your Zymax for about 8 weeks now. We both needed to lose 20 pounds, according to our doctor. After going to the gym twice a week for over 6 months and trying a new diet called "The Hollywood Diet," Jim lost about 5 pounds and I maybe lost 3 pounds. We were frustrated and still overweight!

We heard about Zymax from our doctor and decided to give it a try. Our results were amazing. Weight loss began almost immediately. I have so much more energy now! Jim comes home and isn't so tired after work. We've almost reached our weight goals. Zymax has really improved our lives, our health and our relationship. Thank you, Barb & Jim Zaine

### **Why Do You Want To Lose Weight?**

Dr. Perry cautions that Zymax is not for everyone. If you're just after losing 2 to 5 pounds, just eat a salad for lunch for a few days. Zymax was designed to address the chronic needs of the estimated 55% of the population that is now classified as overweight according to the guidelines of the *National Institutes of Health*. Those in this growing group, myself included, applaud the fact that Zymax is a powerful yet natural approach to trimming away those extra pounds.

### **Now Available Without Prescription**

Since the Zymax formula is natural, you do not need a doctor's prescription as you do with many of the pills recently released by the drug giants. Zymax is inexpensive, since you avoid the typical 300% markup you pay when buying something in a store. Best of all, I have to admit after trying the little pink pills myself, Zymax works!

If you're in doubt, you'll be comforted by the Denman Scientific Research unusual guarantee. They let you experience Zymax for a full 30-days. If you don't have more energy and lose weight as promised, just return the unused portion or empty bottle, and your purchase price will be promptly refunded. Could you imagine walking into a drug store or supermarket with an empty bottle of diet pills and asking the thin little teenager at the cash register for your money back? I don't think so... Zymax comes from a solid company with a good reputation. You even get a special number to speak with a knowledgeable customer service rep during office hours.

Bernard Gubman, Pharmacist

Dear Denman Scientific Research Customer Service:

I apologize for being so skeptical when I called and asked if Zymax really works. Your representative, Lily, was so pleasant and patient with me. You see, I had been 60 pounds overweight for most of my adult life and embarrassed to leave my house at times. I had tried so many other diet pills and all I lost was more self-image and more money. I hope you understand why I asked so many questions now.

I am writing this letter to let you know that Zymax worked great for me. Each morning when I got on my bathroom scale, the weight loss was obvious—but even more impressive was when I looked in the mirror! I could actually see myself getting thinner everyday! I am almost at my goal weight and ready to switch to the Zymax maintenance program.

You were right about the incredible energy too! Some other pills I tried gave me the jitters, but Zymax just gives me a healthy, youthful feeling of energy—and I love it! Best of all, it's been months now and my weight is staying down, and I still have lots of energy. I feel young again and met Bill, the love of my life!

We were on vacation and my best friend took this picture. Who would believe that I would still be losing weight while on vacation! Everyone I know wants Zymax. Thanks, Love Alice Wilcox, NY, NY

# Got Questions?

Below are the most frequently asked questions received by the Denman Scientific Research consultants, and answers provided by their medical and professional staff.

Q

"I have tried those appetite suppressants that you can buy in stores and they really don't work for me. Why will Zymax work when I've failed with so many other methods to lose weight?"

A

This is one of the most frequently asked questions. Zymax attacks fat very differently than common appetite suppressants or fat-blockers sold in stores and on TV. Zymax works by naturally increasing thermogenesis and directing your body to use stubborn stored fat as energy. The result is a flood of new energy plus weight loss you can count on.

You're not alone — many of those in the clinical studies also had failed using other methods, and were quite surprised at how easy it was to lose weight quickly with Zymax.

Q

"I hate taking pills. Are these those giant horse pills? How many a day do you have to take?"

A

A lot of people have trouble swallowing pills. We've made it very easy. Zymax comes in tiny tablets which have been coated with a natural, micro-thin outer shell making them very slick. They literally slide down! You will take only 1-2 tablets at mealtimes, depending on where you are in your weight loss cycle. It's really very easy.

Q

"How much and how fast will I lose weight with Zymax? Is there a diet you have to follow?"

A

Since results naturally vary, this is a difficult question to accurately answer. Weight loss often begins in about 48 hours after taking Zymax and then accelerates over the next few days to a week. You should set a target weight prior to beginning Zymax. As your weight begins to plummet, switch to the Phase 2 dose, explained in the instruction booklet. **Losing too much weight can be just as unhealthy as being overweight!**

There is absolutely no starvation diet to follow.

Q

"I am taking prescription drugs for a few different reasons. Will Zymax interact with other medications?"

A

If you are taking other medications or have a preexisting medical condition, you should consult with your healthcare provider before beginning the Zymax program. Zymax comes with a risk free money-back guarantee and you are welcome to show the formula to your doctor to make sure it is compatible with your prescribed medications or condition.

Vitamins and other supplements can always be taken along with Zymax.

**THE FEELING**
