## County Juvenile Recidivism Reports

## 1998-2002 Data as Reported by Individual County

The following pages contain juvenile data as reported by Oregon's 36* counties.
As with the statewide data, recidivism baseline data begin with an initial criminal referral occurring in any of the five years studied. Subsequent crime is tracked for 12 months following an initial referral.

Virtually all of the counties' recidivism data show a similar pattern. A small group of offenders commit a majority of new crimes. While the proportion of chronic offenders varied among counties, this pattern did not change by location.

* The Juvenile Justice Information System (JJIS) is the primary data source for the report. All Oregon counties are represented in JJIS.

## Baker County

The table below is the overview data on juvenile recidivism in the county for the years 1998 through 2002. Recidivism is based on a new criminal referral within 12 months of the initial referral. The data exclude violations and status offenses.
