

Table 40. Summary of short-term projection results for witch flounder. Projected median estimates of landings (mt), discards (mt), and spawning stock biomass (mt) are provided: 1) status quo fishing mortality ($F_{2003} = F_{2002} = 0.41$); 2) fishing mortality at $F_{msy} = F_{40\%} = 0.23$; 3) fishing mortality at 75% of F_{msy} ; and 4) status quo landings ($landings_{2003} = landings_{2002}$).
