Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

Clockwise flow around high pressure in the southwest United States created a northwest wind flow aloft over Arkansas. This drove a cold front toward the region. Precipitation was more organized along and ahead of the front, with scattered to numerous showers and thunderstorms.

07/01/08 00:00 CST 0 Flood (due to Planned Dam Release) 07/18/08 17:00 CST 10K Source: Official NWS Observations

Reservoir releases from the upstream Corps of Engineers' lakes prolonged the high water event and kept the stage at Augusta above flood stage into the middle of the month. While the stage remained slightly above flood stage, farmers planted down to the water's edge. A brief period of higher stages during the week after the 4th of July holiday put water over several hundred acres of newly sprouted soybeans and killed the tender plants. Additional damages were noted

07/01/08 00:00 CST 0 Flood (due to Planned Dam Release) 07/18/08 17:00 CST 10K Source: Official NWS Observations

Reservoir releases from the upstream Corps of Engineers' lakes prolonged the high water event and kept the stage at Augusta above flood stage into the middle of the month. While the stage remained slightly above flood stage, farmers planted down to the water's edge. A brief period of higher stages during the week after the 4th of July holiday put water over several hundred acres of newly sprouted soybeans and killed the tender plants. Additional damages were noted.

Reservoir releases from Bull Shoals and Norfork Dams caused minor flooding along the lower White River in the Augusta reach of the river. Primary impacts were to the agricultural community.
