

Oregon Public Health Immunization Program Special Tdap Reporting Matrix

It is very important that we capture doses of Special Tdap in the ALERT Registry. Doing so will add more lifespan data to the registry, and will help prevent costly duplicate vaccination. We prefer that clinics currently submitting ALERT data submit the Special Tdap doses in the same way other doses are submitted. This list is provided to outline the process:

Current Reporting Method	Special Tdap Reporting Options
<p>Barcodes:</p>	<p>Current Patients: Attach Tdap or “other” barcode label to pink/purple Vaccine Reporting slip. If they are VFC eligible, code as normal using checkboxes on the left. If they are not VFC eligible, write “S” over eligibility checkboxes, without checking any box. Other vaccinations should be submitted on a separate pink/purple slip with eligibility category selected as usual.</p> <p>New Patients: Complete blue New Enrollee form, assign barcode label sheet, and follow instructions for ongoing patients above. We now have New Enrollee forms; tailored for all ages, call ALERT to order.</p>
<p>Electronic Data Transfer:</p>	<p>Data Extract: Alter your ALERT extract date range to include all ages. Enter doses as usual into record system.</p>
<p>IRIS data entry:</p>	<p>IRIS: Data enter your doses as usual, coding any Tdap Special Project doses as “S”. Persons usually eligible under VFC should be coded as normal, using the eligibility code used regularly. No other changes needed.</p>
<p>Special Populations Form: (OYA, Planned Parenthood, DOC, Job Corps, etc)</p>	<p>Special Populations: Use current form, write Tdap into ‘Other’ spot, when applicable. Send to ALERT as usual.</p>
<p>Not Currently Reporting:</p>	<p>Registry Provider: Work with ALERT staff to become a regular ALERT user (1-800-980-9431)</p> <p>-or-</p> <p>Roster: Use electronic roster (to be provided soon). Keep VARs to enter once roster is available. Do not create your own file, you will need to use the one provided.</p> <p>-or-</p> <p>Web Entry: Use ALERT Web Entry (you can enter doses online, available in August on the secure ALERT website [www.immalert.org], keep VARs to data enter then).</p>
