When reporting barrels, carry the decimal to two places,

Decimals of .005 or larger should be rounded up.
Example 12.387 would be reported as 12.39.
Decimals of .004 and lower should be dropped.
Example 12.384 would be 12.38.

The total amount of Barrels per invoice can be calculated by:

Multiplying the number of containers by factors shown below for that case size.

If other size containers are received, the factor can be calculated by

Number of bottles in case multiplied by number of ounces in each bottle = total ounces.

Divide the total ounces by 3968 to get the factor. Factor multiplied by number of cases = Barrels

Converting Liters to Gallons: Liters multiplied by .26417 = Gallons **31 Gallons = 1 Barrel**

This form should be prepared in duplicate: One copy to OLCC, One copy for your records.

This report is not required if there are no shipments into Oregon in a given month.
