

Unduplicated Placement Rate Report

Year Span	Services Completed	Total Exited	Total Employed	Placement Rate A	Unduplicated Exited	Unduplicated Employed	Unduplicated Placement Rate B	Rate Change (B - A)
One-Year	July 1, 2006 - June 30, 2007	343,005	258,295	75.30%	288,163	219,788	76.27%	0.97%
Two-Year	July 1, 2005 - June 30, 2007	612,873	466,278	76.08%	428,050	332,730	77.73%	1.65%
Three-Year	July 1, 2004 - June 30, 2007	890,909	676,518	75.94%	514,090	405,336	78.85%	2.91%
Four-Year	July 1, 2003 - June 30, 2007	1,183,061	885,769	74.87%	615,477	482,493	78.39%	3.52%
Five-Year	July 1, 2002 - June 30, 2007	1,528,886	1,131,777	74.03%	710,852	558,897	78.62%	4.59%

Compare the duplication in one-year vs five-year service period.

Individuals served by Oregon's Workforce System can, and often do, receive services by more than one agency. The longer the time period of reporting, the greater the chance an individual is served multiple times. Quarterly PRISM reports do not show unduplicated numbers. This report shows the actual placement rate as reported on PRISM quarterly reports and the unduplicated placement rate when an individual is counted only once for placement.

During one year (July 1, 2006 to June 30, 2007) 258,295 customers got a job after receiving services. This is a placement rate of 75.30%. Eliminating multiple services to individuals, 219,788 individuals got a job after receiving workforce services. After unduplicating the number of customers getting jobs, the placement rate increases to 76.27%.

Increasing the length of the reporting period to five years (July 1, 2002 to June 30, 2007) 1,131,777 customers got jobs after receiving workforce services. Eliminating multiple services and agencies, the unduplicated number of individuals who got jobs is 558,897 or a placement rate of 78.62%.
