

# The Current State of the TLUMIP Models

Presentation to the 4<sup>th</sup> Oregon Symposium  
on Integrating Land Use and Transportation Models  
November 16, 2005

Tara Weidner, PB Consult Inc.

## The Goal...

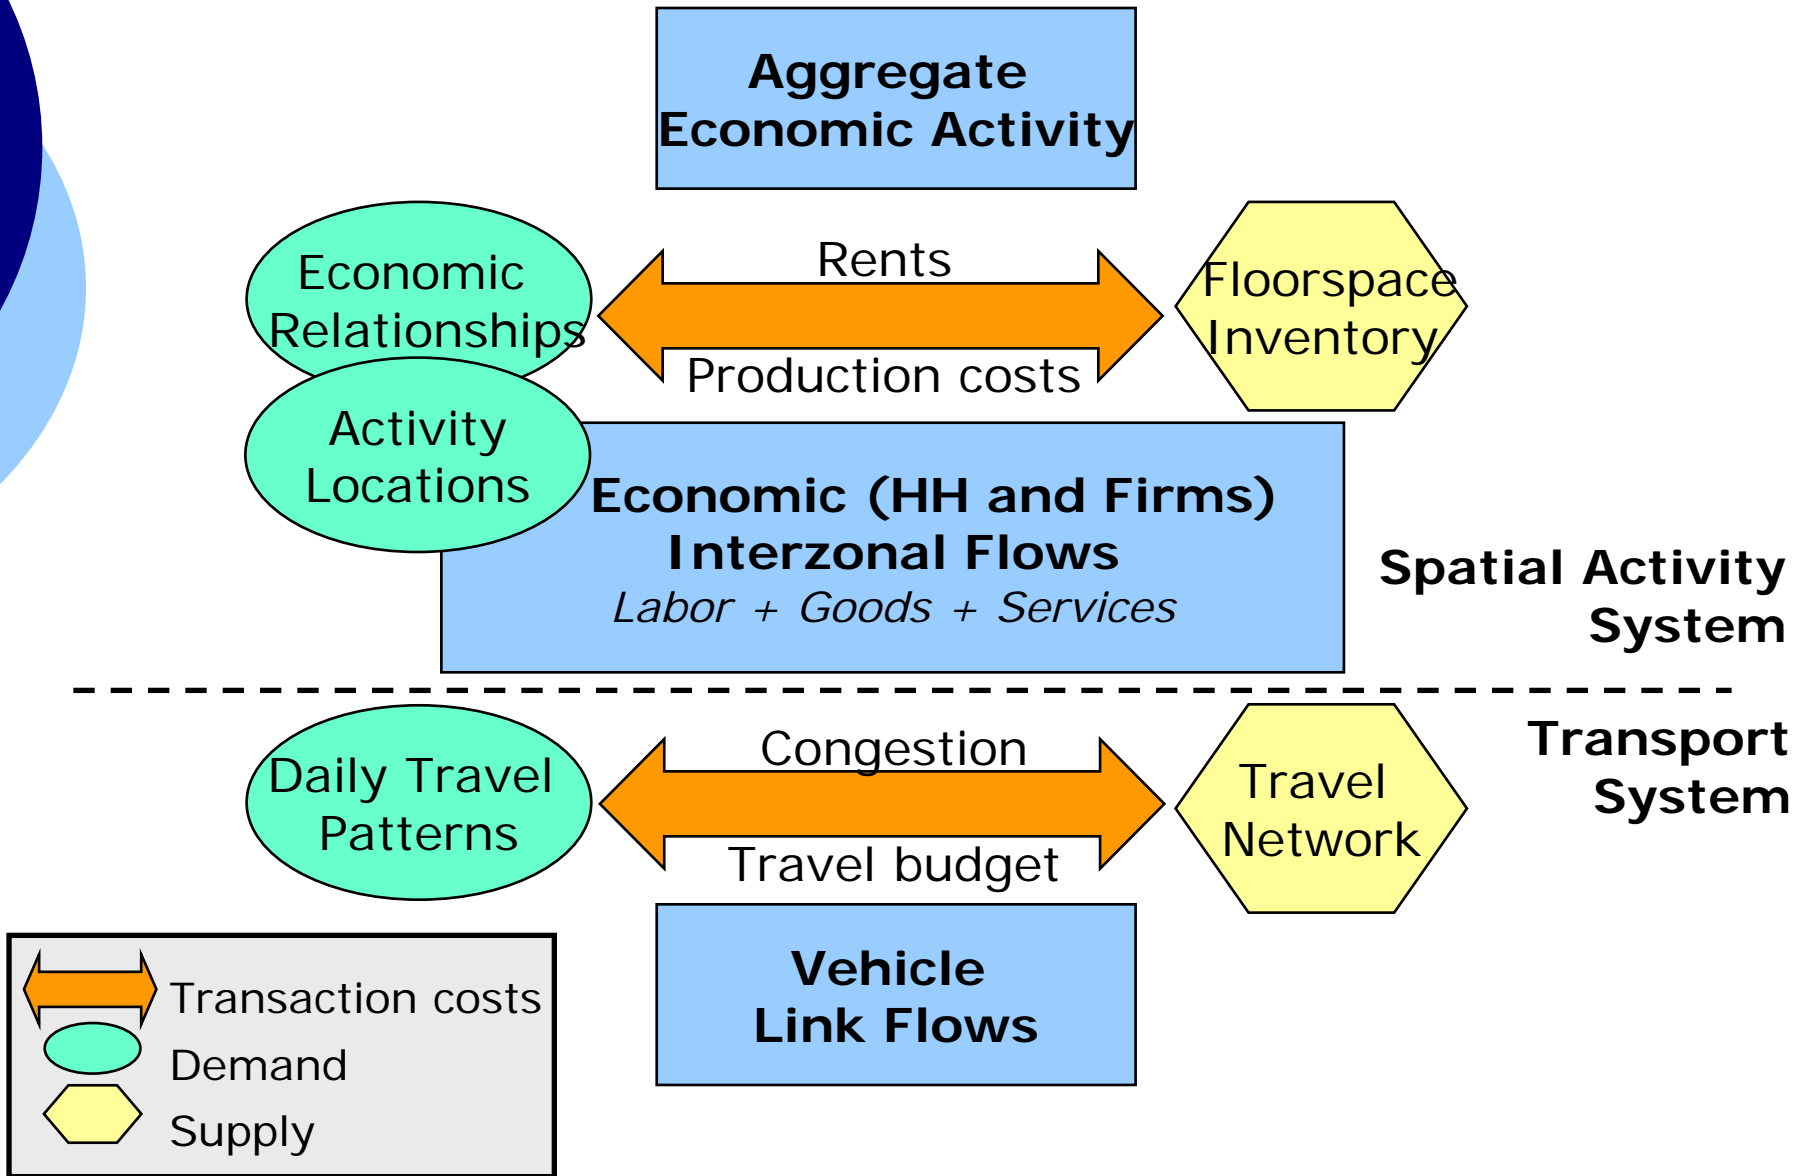

Build and apply the latest models in order to...

- understand and predict the cumulative effect of Economic- land use – transport

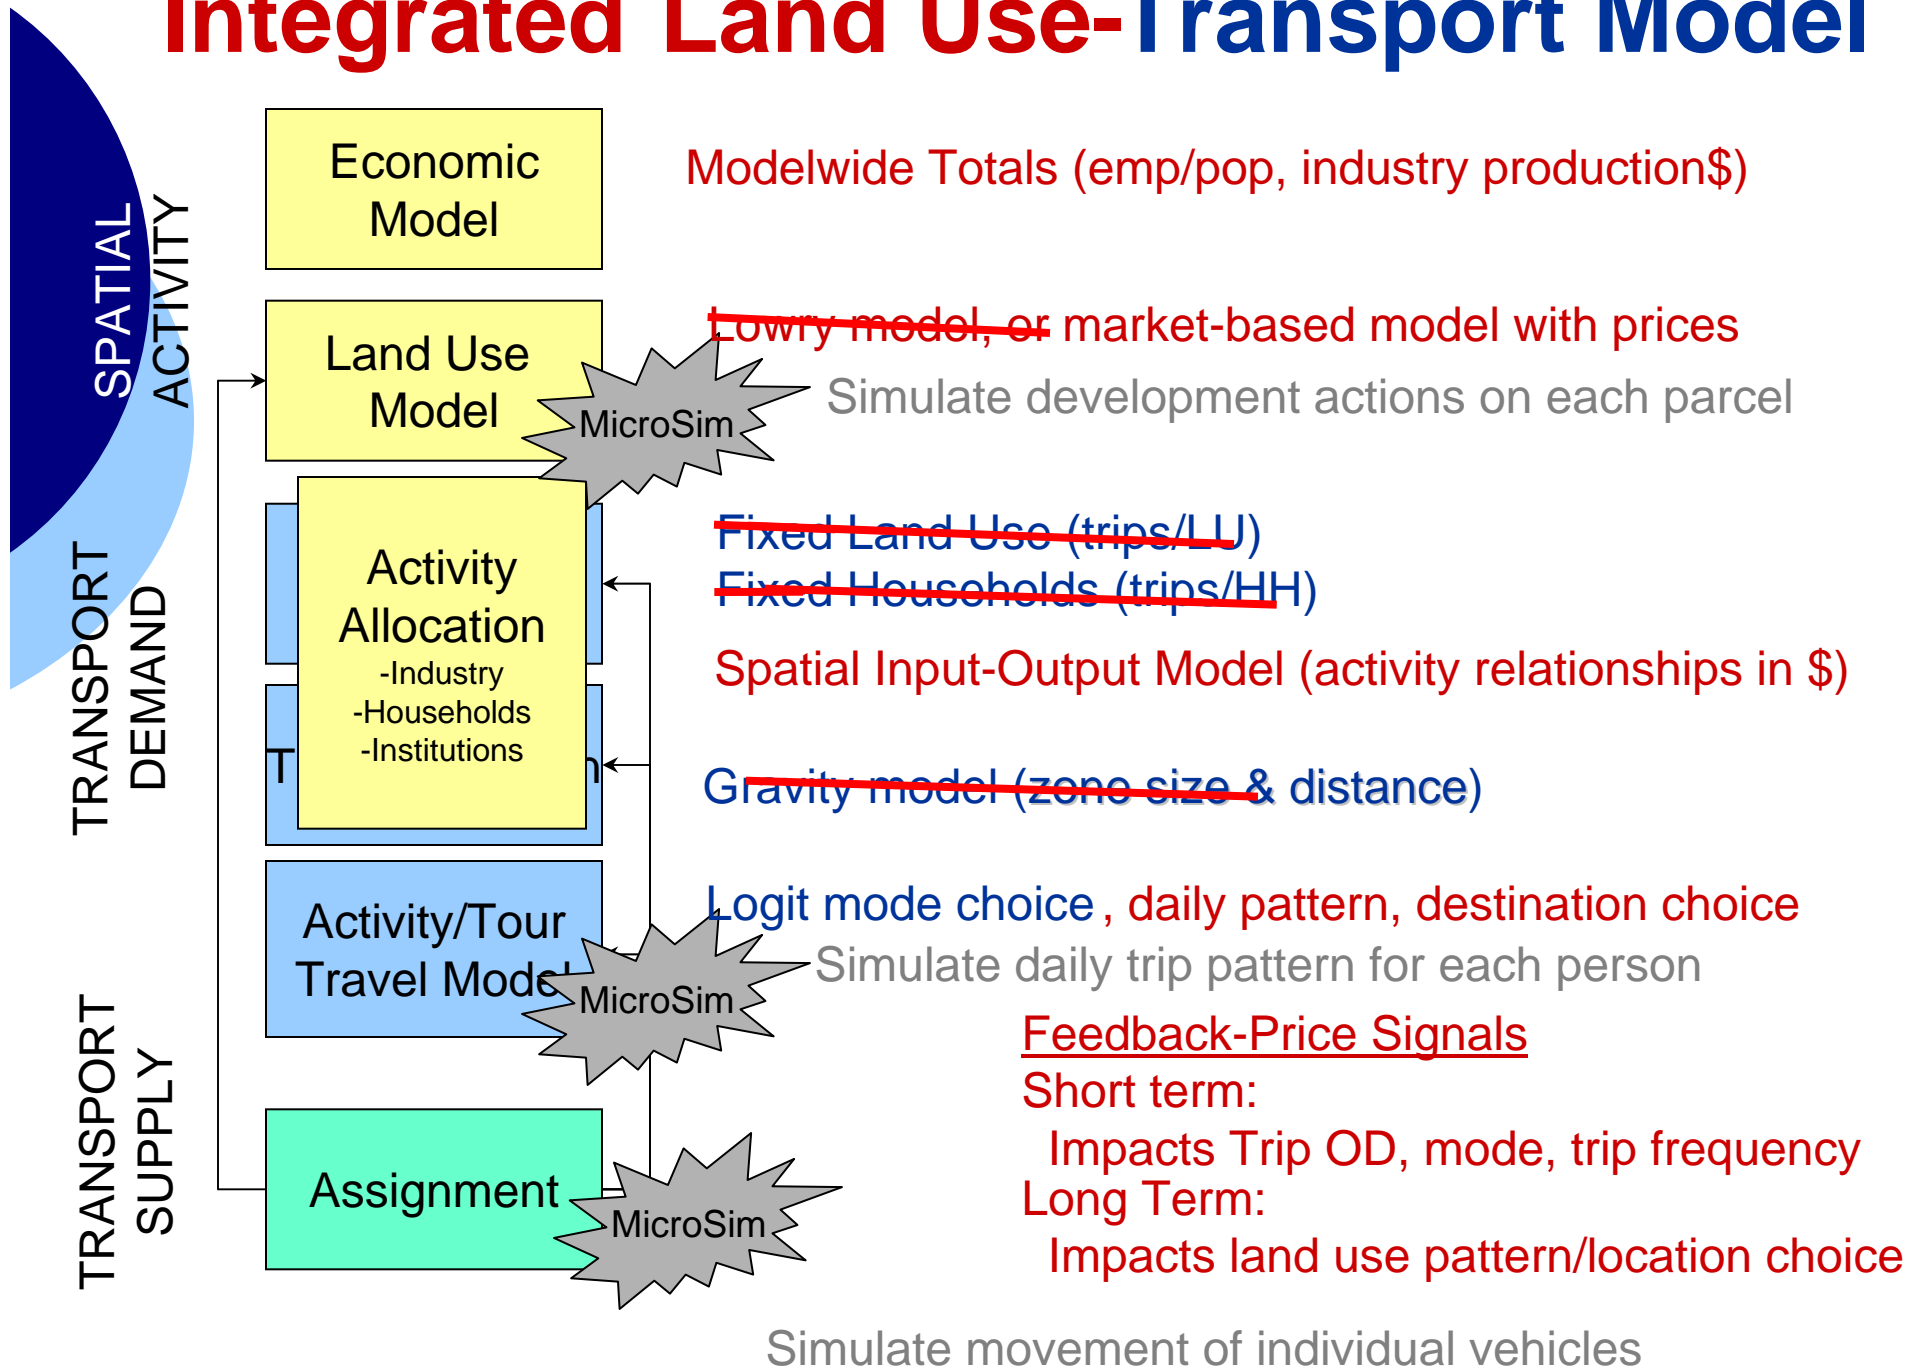

Use these models to provide data that will...

- help state/MPOs meet new state/federal mandates
- participate in statewide investment/policy decisions

# Economic-Land Use-Transport System

# Integrated Land Use-Transport Model

# The Path...

## Application-driven research

### Model Development

### Applications

#### **Oregon1 Model**

- TRANUS/Oregon (2000)
- UrbanSim (1998)
- WV Forum (2001)
- East/Central OR Fwy (2001)
- Bridge Options Study (2002)
- Newburg-Dundee (2004)
- OTP (2005)

#### **Oregon2 Transitional Model**

- Assembled (2004-2005)
- TBD (2007)
- Calibrated (forthcoming 2006)

#### **Full Oregon2 Model**

# Why the Transitional Model

- Data issues
  - Base-year built form (land use/floorspace)
  - Limited data for Households (HA) calibration
- Get working model
  - Shorter development time
  - Less calibration demands
  - Need to refine distributed computing strategy

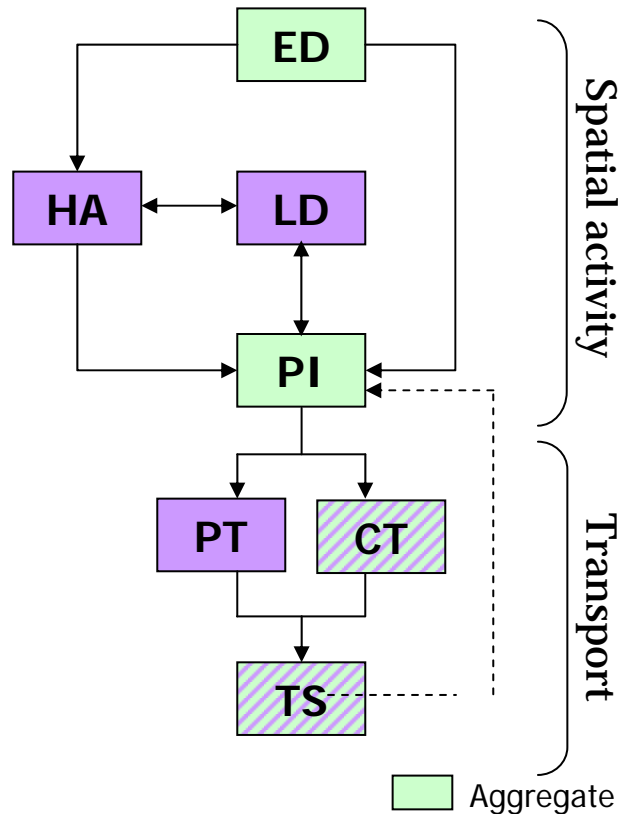

# The State of TLUMIP...

- Oregon2 Transitional Model
  - Compared to Oregon1/Oregon2
  - Model Flows
  - Current efforts
- Other activities
  - Model Applications
  - MPO-Statewide model integration
  - Update of Oregon2 specification

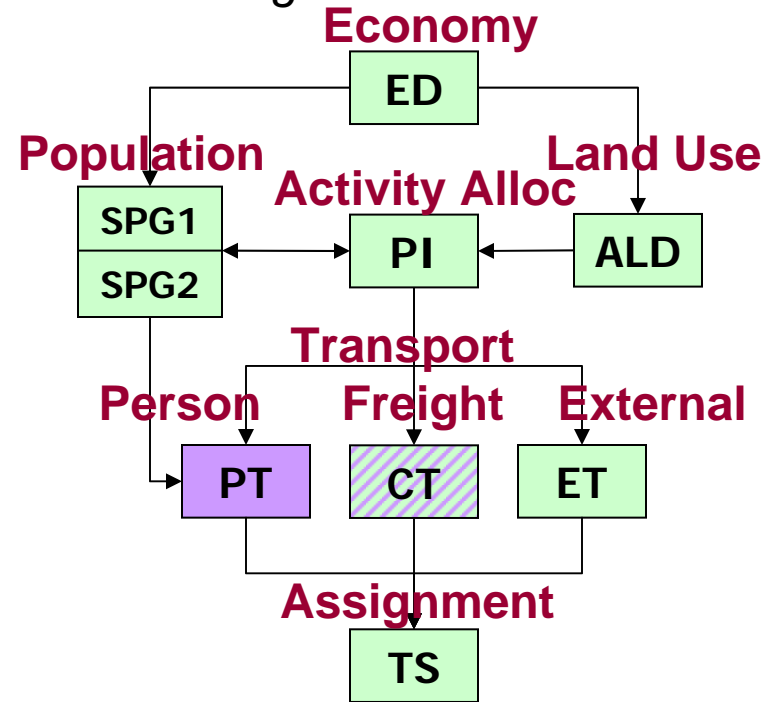

# Oregon2 Transitional Model

## -- simplification of full Oregon2

Original Oregon2 Model

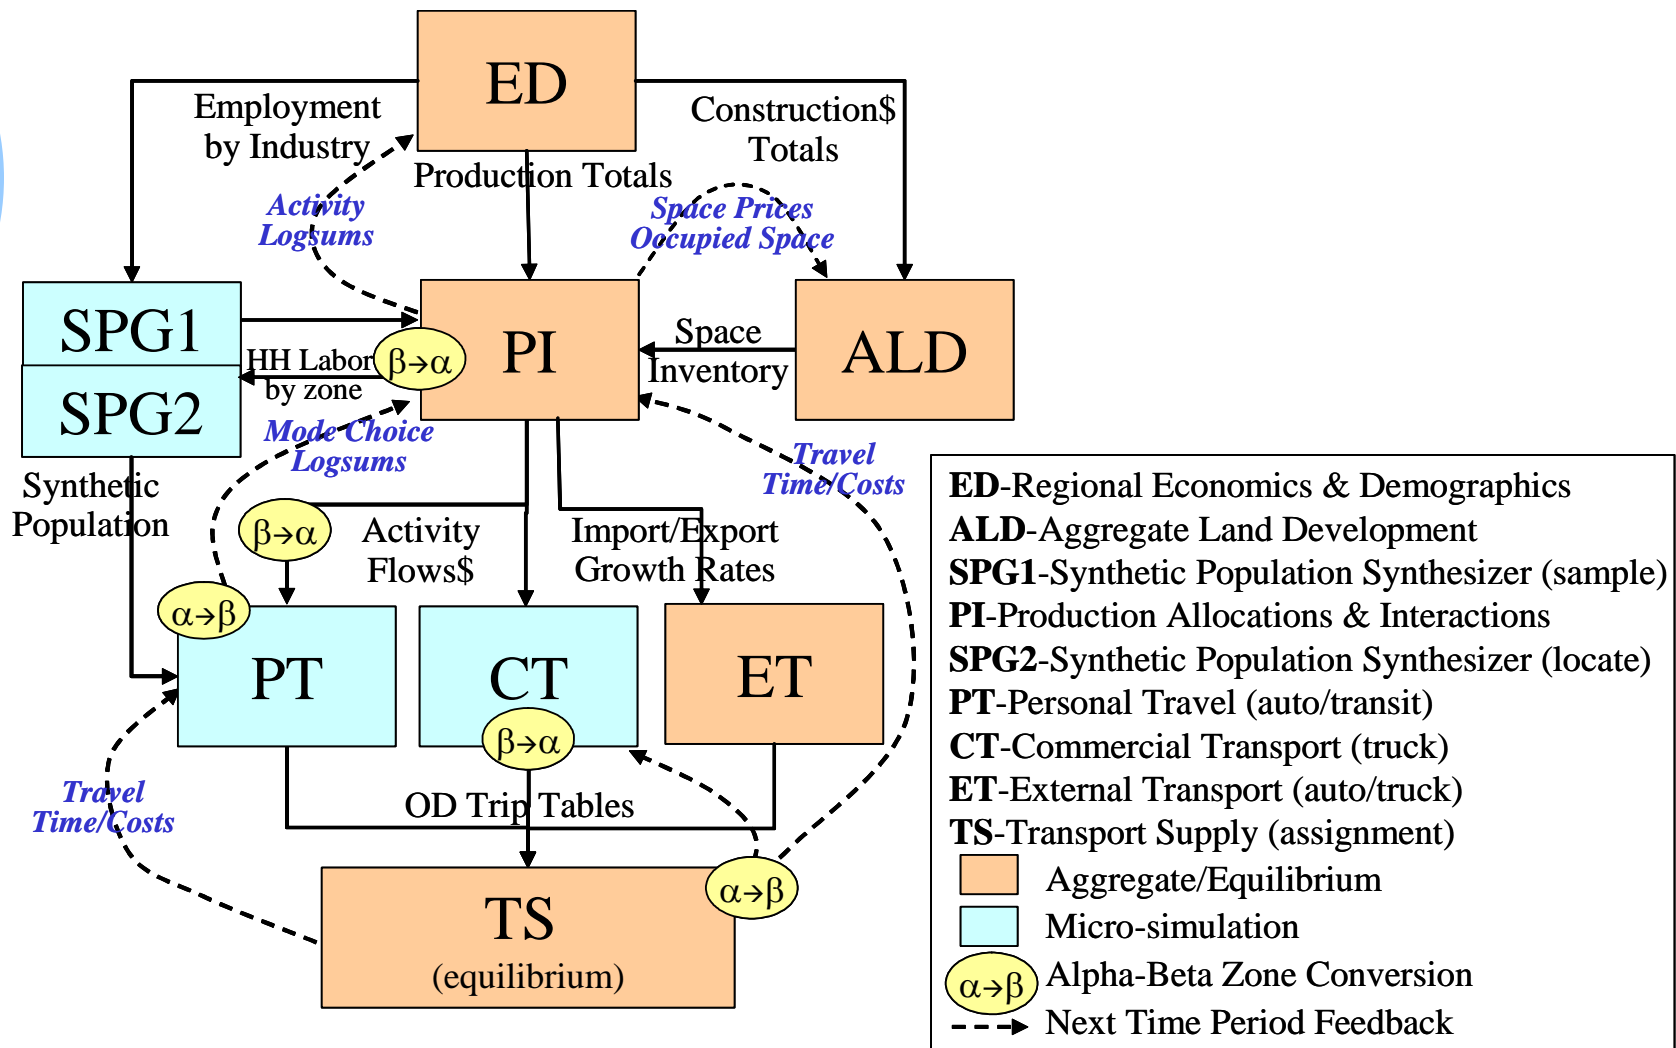

Current Oregon2 Transitional Model

- Replaced HA, LD with aggregate treatment: SPG, ALD
- Move household functionality to PI and PT
- Simplified Economic (ED) and Assignment (TS) modules
- Added External Transport module (ET)

# Oregon2TM Model structure

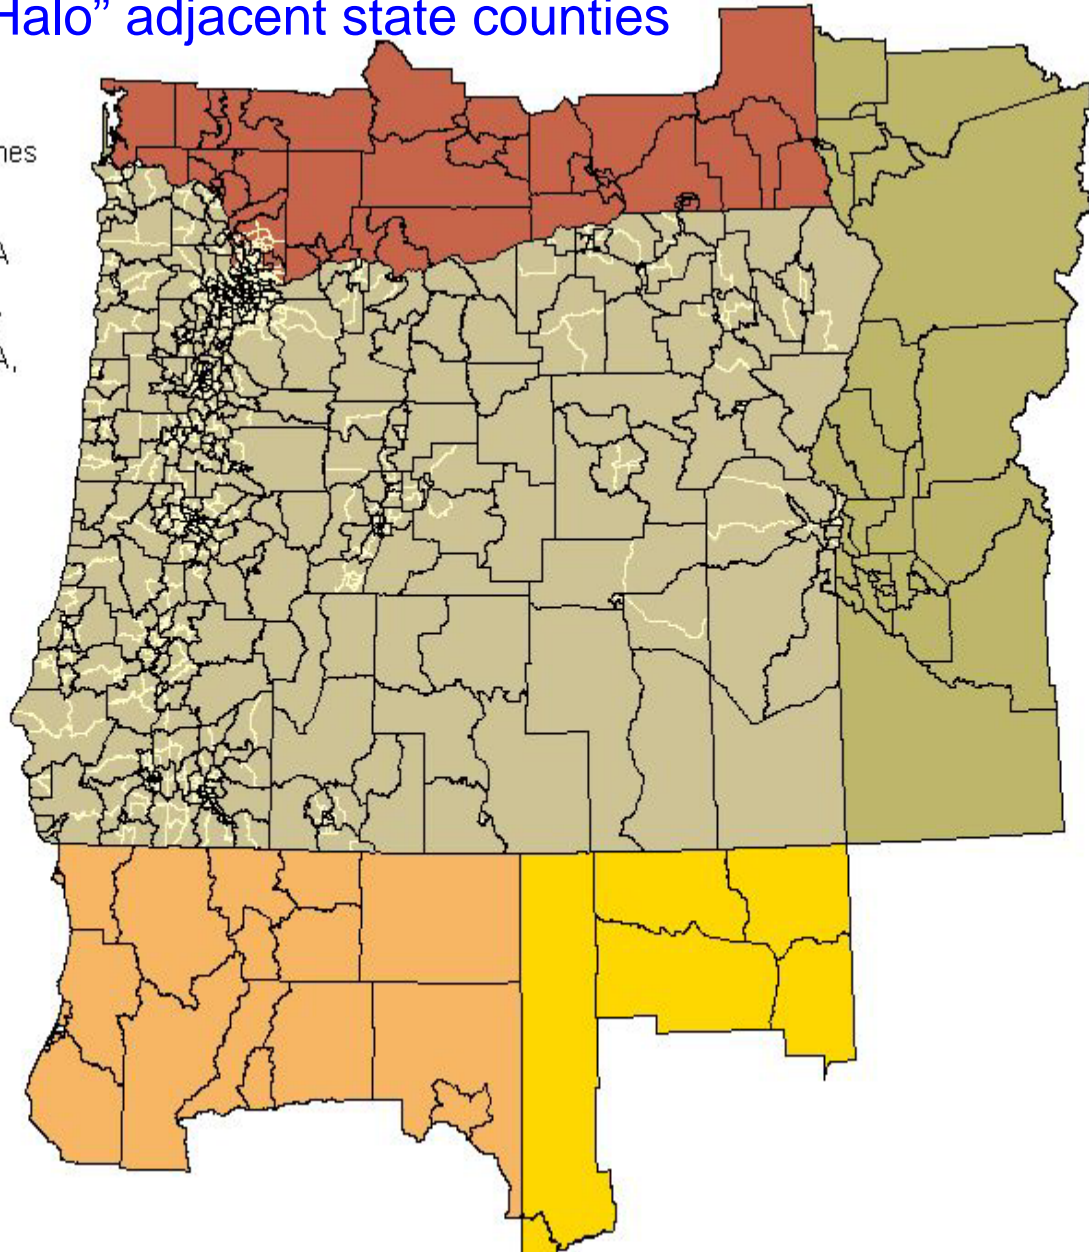

# Oregon2 model coverage and zones

36 Oregon and 39 "Halo" adjacent state counties

- Alpha Zones
- Beta Zones
- Oregon
- Halo - CA
- Halo - ID
- Halo - NV
- Halo - WA,

2,950 alphazones  
519 betazones

# Oregon2TM: Advantages over Oregon1

## General

- More detailed geographic coverage
  - Zones (2950 vs. 125 in Oregon1)
  - Transport network (40,000 links vs. 2,000 in Oregon1)
- More detailed model categories
  - Industries (25 + 14 white-collar vs. 12 in Oregon1)
  - Goods (42 vs. 12 in Oregon1), services, labor occupations
  - Floorspace types (19 vs. 2 in Oregon1)
  - HHs by HHsize & income group (18 vs. 3 in Oregon1)
  - Truck weight configurations (5 vs. 3 in Oregon1)
- 1-Year time increments (5-years in Oregon1)
- Distributed-application framework
- Software flexibility

# Oregon2TM: Advantages over Oregon1

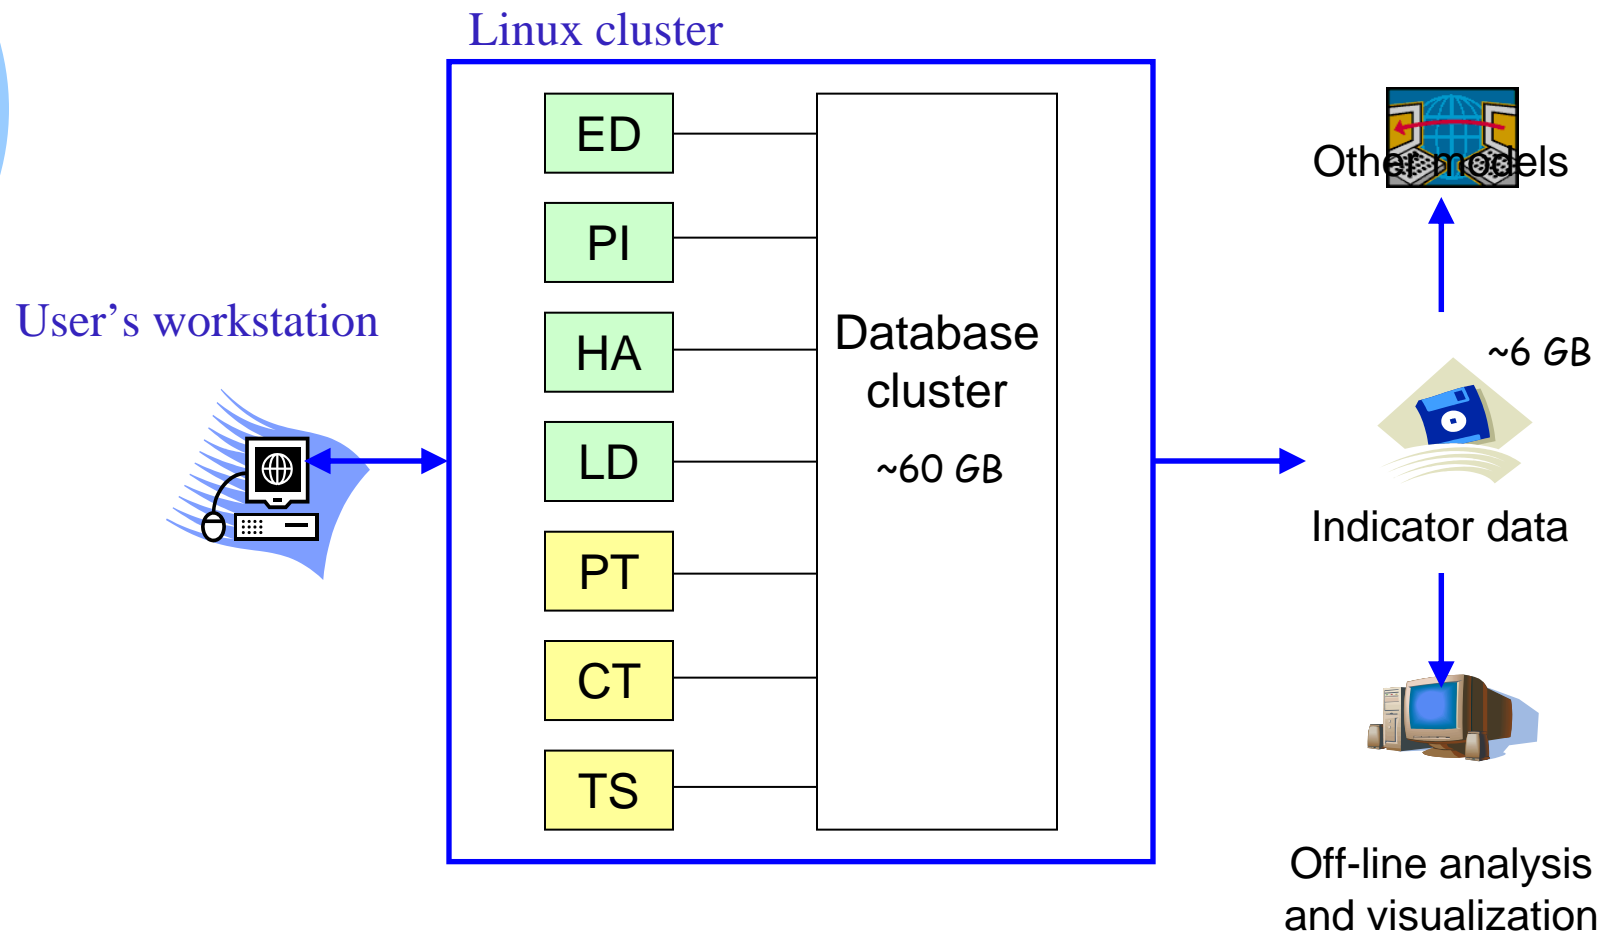

## **Spatial Activity Model**

- Endogenous economic forecast (from exogenous national forecast)
- Explicit commodities with market-clearing prices
- Explicit treatment of labor and ability for consumer (rather than producer) to pay transport costs
- Zoning input (34 zoning codes)

## **Transportation Models**

- Micro-simulation
  - Activity- based daily travel for nearly 6 million people
  - Tour-based freight movement, with distribution centers
- Peak/Off-peak period Assignment

# Oregon2TM status: Assembled and run remotely

# Oregon2TM status: Calibration Website

## To start:

- type in your browser: [www.pbxm.com](http://www.pbxm.com)  
(or <http://204.134.52.35/>)

- Click on: [TLUMIP Calibration Results](#)

This leads you to the **main page** with entries for each module, and a final entry to view files on the main computer cluster (e.g., log files, small input/output files; large files will take some time to view).

## TLUMIP

### Calibration Run Summaries

# OVERVIEW

When you click on a module, you will see the following:

- (optional) Page listing measures of assessment, click to get the following:
- Left hand column **listing** tables/figures
- Right hand series of tables/figures.

The tables/figures/maps are typically one of the following types:

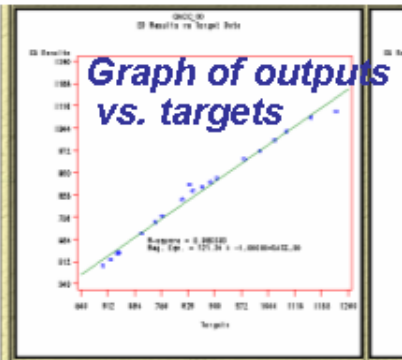

- Table** comparing module outputs against targets, where available.
- Graph** comparing of module outputs (y-axis) against targets (x-axis). Thus over predictions are above and under predictions below the 45 degree line.
- Geographical map** displaying module results at either a state level (e.g., counties, PUMAs, etc.) or regional level (e.g., azones, bzones)
- **Regression** of module results against targets
- **Histogram** of module results against targets

Note: To show additional detail move mouse over top of graphed points.

Goodness of Fit Statistics for \* Portland PT Tours vs Targets  
Number of Activities per Pattern by MPO Area

The MPO Regression Model results independent variables:

Number of observations used: [ ]  
Number of observations used: [ ]

Analysis of Variance

Source	DF	Sum of Squares	F Value	Pr > F
Model				
Error				
Corrected Total				

Model Fit

Variable	Parameter Estimate	Standard Error	t-Statistic	Pr >  t
Intercept				
Target				

## County Map of Outputs

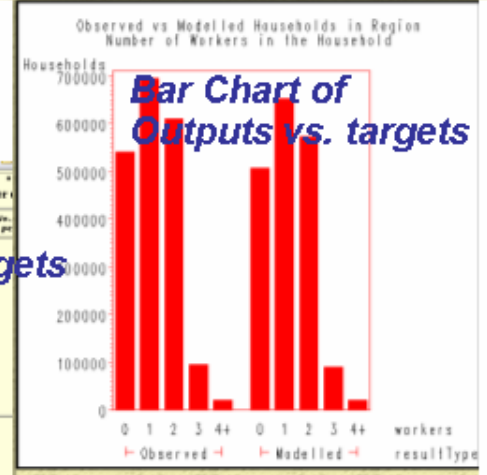

Table of Outputs (no targets available)

Observed vs Modelled Households in Region  
Number of Workers in the Household

The FREQ Procedure

Frequency Percent Row Pct Col Pct	Table of workers by resultType			
	workers	Observed	Modelled	Total
0	10117	10700	20817	30934
1	1200	1200	2400	3600
2	1000	1000	2000	3000
3	1000	1000	2000	3000
4+	1000	1000	2000	3000
Total	14317	15100	29417	43517

# Model Applications

- Oregon1
  - OTP completion during public review
  - OTIAIII Bridge efforts (state-level)
- Oregon2TM (start in late 2006/2007)
  - OTIAIII Bridge efforts (corridor analysis)
  - Metro 2040 update/New Look
  - Central-Eastern Oregon Livability Study
  - Other Possibilities
    - Alternative to the fuel tax
    - Intermodal freight

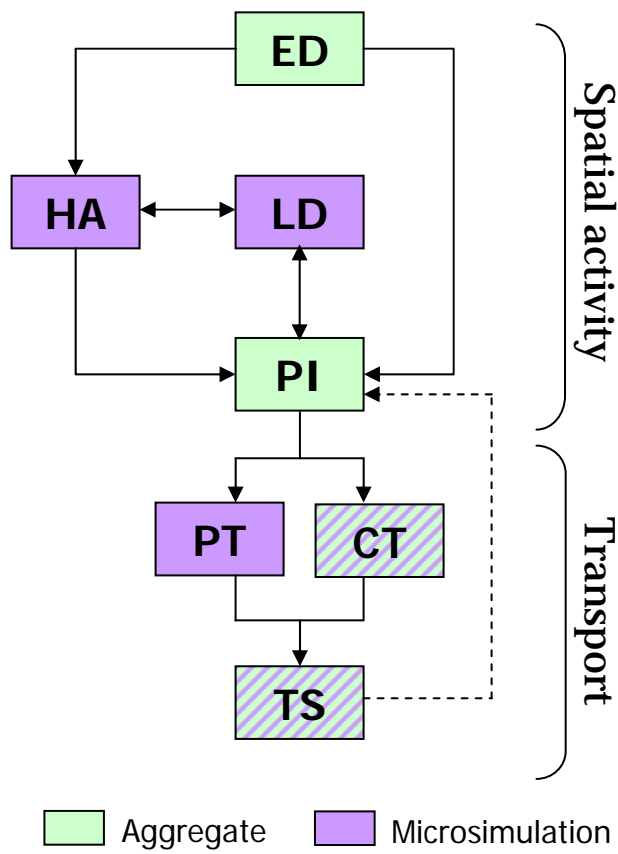

# MPO-Statewide Interface

- Design Document (by mid-2005)
  - Goals/policy-level guidelines
  - Implementation level
    - Networks/Zones
    - Category definitions
    - Planned projects (level of detail)
    - Data to be shared (inputs/outputs)
    - Common reference scenario
    - Periodic updates
- MPO data for model review/calibration
- Collaborative ODOT-MPO Projects

# Update Oregon2 Model Design

*Original Oregon2 Model*

## Update to incorporate...

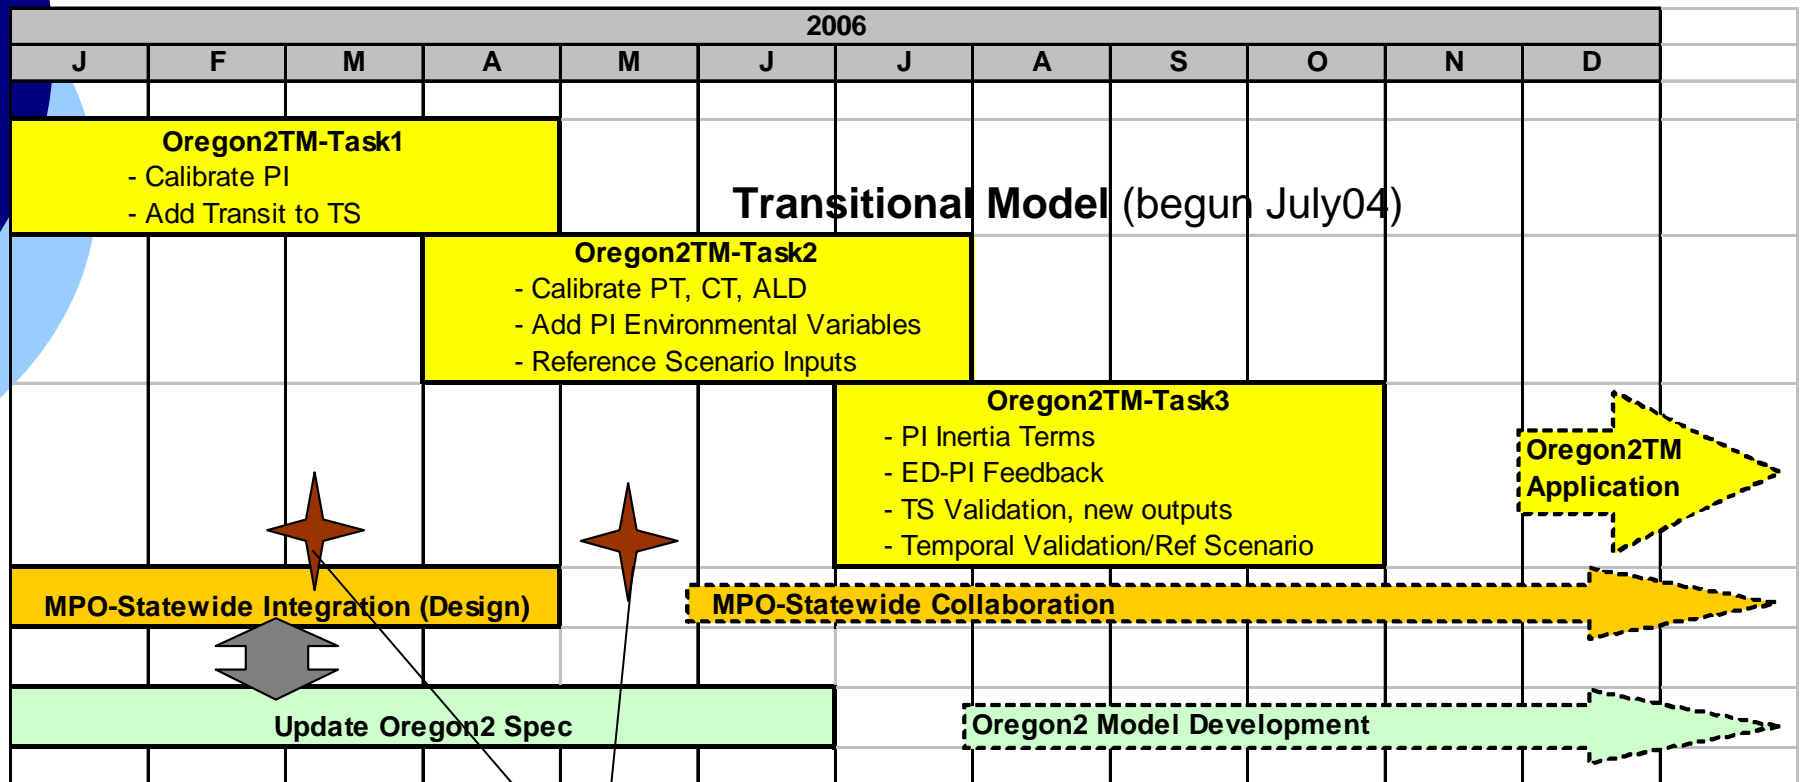

- Lessons Learned to date
- Environmental/sustainability indicators
- Visualization/GIS
- MPO-Statewide Integration
- Oregon2™ implementation Architecture Review
- Latest theory/practice (Peer Review Panel)
- Learning from others

## Ongoing Implementation Challenges

- staff training
- data requirements
- partnerships with PSU
- effort required to use the models
- managing expectations with staff/team resources
- contracting!!

# TLUMIP Next 12 months...

**Peer Review Panel Meetings**  
(previously June02, July03, Aug05)
