

2002 OREGON STATE HIGHWAY CRASH RATE TABLES

Oregon Department of Transportation
Transportation Development Division
Crash Analysis and Reporting Unit
555 13th Street NE, Suite 2
Salem, OR 97301-4178

Mark Wills
Manager

September 2003

The information contained in this publication is compiled from individual driver and police crash reports submitted to the Oregon Department of Transportation as required in ORS 811.720. The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit can not guarantee that all qualifying crashes are represented nor can assurances be made that all details pertaining to a single crash are accurate.

PART THREE - Fatal Traffic Crash Summaries

By Roadway System.....	247
By Type of Collision.....	247
By Sites and Conditions.....	248

PART FOUR - Glossary

Glossary.....	251
---------------	-----

INTRODUCTION

The three parts of this report are:

- I Results of Analysis - containing comparative tables and a list of highways by number, name and route;
- II Highway crash rates for the last five years,
- III Summaries of this year's fatal traffic crashes.

The first two parts provide data that show crash frequencies in relation to traffic volume and mileage segment length. Any comparison of crash data, either by count or formula, must recognize the vehicle miles involved. Failure to evaluate the data in this manner could lead to errors.

Part I compares Oregon to the nationwide traffic death rate. Traveled mileage death rates and population death rates are shown, as well as comparative rates by design types. Freeway and non-freeway data are presented by urban, suburban and rural subgroups.

Part II presents five-year crash rates for each highway. Each state highway is divided into urban and rural sections, which are further subdivided for analysis. The start milepoint, segment length, number of crashes, average daily traffic, current crash rate, and the crash rate for the previous four years is shown for each sub section. Each section and highway is summarized.

Part III contains summaries of this year's fatal crashes in Oregon.

Since 1941, the Department of Transportation has summarized the records of all Oregon motor vehicle traffic crashes. This crash data has been made available to the public as well as government agencies. Since 1948, the Department has published traffic crash data. Current crash coding is guided by the "Manual on Classification of Motor Vehicle Traffic Accidents, 1989", published by the National Safety Council.

Since 1998, Oregon law has required that any traffic crash on a public roadway resulting in a fatality, bodily injury or damage to one person's property in excess of \$1000 be reported. The Driver and Motor Vehicles Services Division is the repository for these reports.

PART 1

RESULTS OF ANALYSIS

FACTS OF INTEREST

The State Highway System accounted for 20,940,683,342 vehicle miles of travel during 2002. This was an increase of 2.00 percent from the 2001 total of 20,529,083,733.

The State Highway System had 210 fatal crashes during 2002. This represented a decrease of 15.32 percent from the 248 fatal crashes reported in 2001. The total number of persons killed on state highways in 2002 was 247, a decrease of 14.24 percent from the 2001 total of 288.

The 2002 crash rate per million vehicle miles for non-freeway highway was 1.49. This was 3.38 times more than the total freeway crash rate of 0.44 for the same period. This difference between non-freeway and freeway crash rates indicates the greater safety of travel on freeways.

An estimated 42,815 traffic deaths for the nation is a 1.47 percent increase from the 2001 final figure of 42,196. Oregon, with a total of 436 fatalities in 2002, shows a 10.47 percent decrease from the 487 fatalities in 2001.

OREGON AND NATIONAL FATALITY RATES

Table I reports annual traffic fatality rates based on vehicle miles traveled and on population, statewide and nationally. The figures shown are estimates from state traffic authorities, the U.S. Census Bureau, and the Federal Highway Administration. The fatality rates are calculated using adjusted Vehicle Miles Traveled (VMT) to account for mileage from county roads and city streets. They are not comparable to the rates on the following tables (Tables II, III and IV), which report data for the state highway system only, and exclude county roads and city streets.

TABLE I
MOTOR VEHICLE FATALITY RATES BY VMT AND POPULATION, 1971 - 2002

YEAR	Traveled-Mileage Fatality Rates ¹		Population Fatality Rates ²	
	Oregon	United States	Oregon	United States
2002	1.3	1.5	12.4	14.8
2001	1.4	1.5	14.1	14.7
2000	1.2	1.6	13.2	14.9
1999	1.2	1.6	12.5	15.1
1998	1.6	1.6	16.5	15.3
1997	1.6	1.6	16.3	15.7
1996	1.7	1.7	16.4	15.8
1995	1.9	1.7	18.2	15.8
1994	1.6	1.7	12.8	15.6
1993	1.7	1.7	17.2	15.5
1992	1.6	1.7	15.8	15.4
1991	1.9	1.9	16.5	16.9
1990	2.1	2.1	20.3	18.7
1989	2.4	2.2	23.0	18.9
1988	2.7	2.3	24.4	19.9
1987	2.6	2.4	22.9	20.1
1986	2.7	2.5	23.2	19.8
1985	2.6	2.5	21.0	19.1
1984	2.7	2.6	21.4	19.4
1983	2.7	2.6	20.8	19.0
1982	2.7	3.8	19.5	20.0
1981	3.3	3.2	24.2	22.1
1980	3.3	3.3	24.4	23.5
1979	3.4	3.3	26.5	23.5
1978	3.6	3.3	29.1	23.5
1977	3.7	3.3	28.1	22.7
1976	3.7	3.2	27.2	21.9
1975	3.6	3.4	24.9	21.4
1974	4.4	3.5	29.7	21.9
1973	4.0	4.1	28.5	26.5
1972	4.8	4.3	33.5	27.0
1971	4.8	4.5	31.7	26.7

¹ Number of deaths per 100,000,000 vehicle miles.

² Number of deaths per 100,000 population.

STATE HIGHWAY SYSTEM DATA

Table II shows comparative five-year crash rates for freeways and non-freeways on the state highway system, by urban and rural area, and by primary and secondary designation. Total lengths for the categories are shown for the new year only.

Note: Earlier versions of this publication incorporated "Suburban" data from Table IV into the "Rural" category of Table II. This practice has been changed. "Suburban" data from Table IV is now incorporated into the "Urban" category of Table II, for all data years shown below.

TABLE II
CRASHES PER MILLION VEHICLE MILES – FIVE YEAR COMPARISON

DESCRIPTION	Miles	2002 Rate	2001 Rate	2000 Rate	1999 Rate	1998 Rate
TOTAL						
State Highway System	7,475.61	0.99	1.04	1.01	1.06	1.14
Freeways	759.43	0.43	0.41	0.41	0.35	0.43

Freeways	16.14	0.82	0.81	0.74	0.71	0.79
Non-Freeways	194.38	2.12	2.49	2.37	2.63	2.72

COMPARISON OF CRASH RATE COMPONENTS

The calculation of crash rates involves three basic elements: (1) number of crashes, (2) length of section in miles, and (3) annual traffic volumes (see pg. 17 for formula). Table III is a comparison of these components for the years 2001 and 2002, for freeways and non-freeways, by primary and secondary designation.

TABLE III
CRASH RATE COMPONENTS, 2001 – 2002

DESCRIPTION	No. of Crashes	Section Length	Annual Vehicle Miles	Crashes Per Mile	Crashes Per Million Miles
TOTAL HIGHWAY SYSTEM					
Freeways					
2001	3,955	759.42	9,581,509,655	5.21	0.41
2002	4,260	759.43	9,834,173,696	5.61	0.43
Percent Change	7.71%	0.00%	2.64%	7.71%	4.94%

2002	3,371	2,504.81	2,466,468,911	1.35	1.37
Percent Change	-10.15%	-0.49%	-0.06%	-9.72%	-10.10%

COMPARISON OF CRASH RATES BY JURISDICTION

Table IV reports state highway system crash rate components by freeways and non-freeways; urban, suburban, and rural areas; and primary and secondary designation. Crash rates tend to increase with population density, as shown below.

TABLE IV
2002 CRASH AND FATALITY RATES BY JURISDICTION

DESCRIPTION	Miles*	Vehicle-Miles*	Crashes	Fatalities	Crash Rate**	Fatality Rate***
STATE HWY SYSTEM	7,475.61	20,940,683,342	20,721	247	0.99	1.18
Urban	682.43	6,797,058,048	12,170	36	1.79	0.53
Freeways	127.33	3,542,738,212	2,793	11	0.79	0.31

** Crash rates per one million vehicle miles.

*** Fatality rates per 100 million vehicle miles.

STATE HIGHWAY NUMBERS, NAMES AND ROUTES December 2002

Throughout this report, reference to specific highways is generally made by use of highway numbers. A cross-reference table of highway numbers, route numbers, and highway names is presented on the following pages to facilitate the identification of a specific highway.

The route numbers may traverse the highways in their entirety or only in part. A route number common with another for less than one mile is not shown.

PART II

HIGHWAY CRASH RATES

COMMENTS

CRASH RATE FORMULA

The crash rate represents the number of crashes per million vehicle miles traveled. The rate is computed using the following formula, where:

- *CRASH RATE* is the number of crashes per million vehicle miles traveled;
- *NUMBER OF CRASHES* is the number of crashes that occurred on the given length of section during the current data year;
- *LENGTH OF SECTION* is the roadway length in miles, to the nearest one-hundredth;
- *ADT* is the Average Daily Traffic for the length of section; and
- *NUMBER OF DAYS* is the number of days during the year that the roadway was open to the public for travel.

$$CRASH RATE = \frac{(NUMBER OF CRASHES) * 1,000,000}{(LENGTH OF SECTION) * (ADT) * (NUMBER OF DAYS)}$$

RATES for HIGHWAYS CONTAINING COUPLETS

Some highways contain couplets. A couplet is defined as the two roadways of a divided highway; usually named differently though bearing the same highway number; running approximately parallel to each other; providing for traffic flow in opposite directions; and separated by accessible land. The couplet roadway that bears traffic in the direction of increasing milepoints is on the **Add mileage** side of the highway, and the couplet roadway that bears traffic in the opposite direction is on the **Non-Add mileage** side of highway. In this publication, the letters “CP” next to a mileage length denotes the **Non-Add** roadway of a couplet. Rates for the individual roadways of a couplet are calculated according to the Crash Rate formula above.

In the following Highway Crash Rate section, mileage totals display **Add** mileage only. **Non-Add** couplet mileage *is not* displayed in the “Total”. However, it *is* used in calculating the weighted average ADT and crash rate for the section, as well as for the total highway.

COMMENTS

(continued)

SEGMENT CRASH COUNTS

A blank in the 'Crash' column indicates no crashes were recorded for the segment during the current data year.

EQUATIONS and OVERLAPPING ('Z') MILEAGE

Milepoint equations exist in areas where a highway was shortened, somewhere other than at the beginning or ending milepoint, due to realignment. Section lengths displaying a lower number in the Miles column than is calculated by subtracting the begin milepoint from the end milepoint, are indicative of the existence of at least one milepoint equation in that milepoint range, or some combination of equations and 'Z' mileage. See Highway 33, milepoint range 23.18 to 34.32.

Overlapping mileage, also known as 'Z' mileage, is created when a highway is lengthened, somewhere other than at the beginning or ending milepoint, due to realignment. Section lengths displaying a higher number in the Miles column than is calculated by subtracting the begin milepoint from the end milepoint, are indicative of the existence of 'Z' mileage in that milepoint range, or some combination of equations and 'Z' mileage. See Highway 33, milepoint range 39.39 to 44.57.

"MUNICIPAL" DEFINITION

Section breaks occur at city limits. For the purposes of this publication, within the following Highway Crash Rate section, "municipal" crashes are those that occurred within city limits. All others are considered "rural".

PART IV

GLOSSARY

GLOSSARY

TERMS AND ABBREVIATIONS AS USED IN THIS PUBLICATION

Alignment	The horizontal and vertical control of a section of roadway or other transportation facility (e.g. multi-use paths, railway, etc.).
Couplet	The two roadways of a divided highway, named differently, approximately parallel with traffic flow in opposite directions and separated by accessible land uses.
Crash	Any motor vehicle collision or non-collision event on a public roadway which results in a fatality, bodily injury, or damage to a person's property in excess of \$1000.
EBD	East-bound direction of travel.
ECL	East city limits.
Freeway	State highway which meets Federal Freeway Standards.
HWY	Highway. A land based public way designated by the Oregon Transportation Commission as a highway for the purpose of vehicular travel. The State of Oregon commonly has, but may not have all, right, title, interest, jurisdiction, maintenance and control of the entire area within the highway right-of-way.
INT	Interchange. A system of interconnecting roadways and structures in conjunction with one or more grade separations that provides for the movement of traffic between two or more roadways on different levels.
JCT	Junction. The intersection of two or more State Highway roadways.
Municipal	Within the city limits of an incorporated city.
NBD	North-bound direction of travel.
NCL	North city limits.
Non-Freeway	State highway which does not meet Federal Freeway Standards.
Non-System	Roadway that is not administered by ODOT; not part of the State Highway System.
O-Pass	Overpass.
O-Xing	Over-crossing.
ORE	Route prefix used to identify state designated routes.
Primary	State highways that have administrative numbers lower than 100.
R/W	Right of way.
Route #	A designation used to identify a point-to-point path.
RR	Railroad.

GLOSSARY

(continued)

Rural	Geographic area outside municipal city boundaries (Highway Rate Section) or urban boundary (Rate Tables II, III, and IV).
SBD	South-bound direction of travel.
SCL	South city limits.
Secondary	State highways that have administrative numbers higher than 99.
Section	A segment of roadway.
SMV	Slow-moving vehicle.
Suburban	Urban area outside city limits but within federal urban transportation boundary
System	Roadway that is administered by ODOT; part of the State Highway System.
U-Xing	Undercrossing.
UPRR	Union Pacific Railroad.
Urban	Geographic area inside federal urban transportation boundary.
US	Route prefix used to identify federally designed routes.
WBD	West-bound direction of travel.
WCL	West city limits.
