

## BBNPDF

### PURPOSE

Compute the beta-binomial probability density function with shape parameters a, b, and N.

### DESCRIPTION

The beta-binomial distribution has the following probability density function:

$$p(x, \alpha, \beta, n) = \frac{B(n - x + \alpha, x + \beta)}{(n + 1) B(n - x + 1, x + 1) B(\alpha, \beta)} \quad x = 0, 1, 2, \dots, n, \alpha, \beta > 0 \quad (\text{EQ Aux-25})$$

where B is the complete beta function and  $\alpha$  and  $\beta$  are shape parameters. See the documentation for the BETA command for a description of the complete beta function.

### SYNTAX

LET <y> = BBNPDF(<x>,<a>,<b>,<n>)

<SUBSET/EXCEPT/FOR qualification>

where <x> is a number, parameter, or variable containing non-negative integer values (real values are rounded to the closest value);

<y> is a variable or a parameter (depending on what <x> is) where the computed beta-binomial pdf value is stored;

<a> is a number, parameter, or variable that specifies the first shape parameter;

<b> is a number, parameter, or variable that specifies the second shape parameter;

<n> is a number, parameter, or variable that specifies the third shape parameter;

and where the <SUBSET/EXCEPT/FOR qualification> is optional.

### EXAMPLES

LET A = BBNPDF(10,0.5,0.9,22)

LET A = BBNPDF(X,2.1,4,N)

LET X2 = BBNPDF(X1,ALPHA,BETA,N)

### NOTE

The beta-binomial distribution is derived from a binomial distribution B:n,p where the p parameter is a beta distributed variable with parameters  $\alpha$  and  $\beta$ .

### DEFAULT

None

### SYNONYMS

None

### RELATED COMMANDS

BBNCDF	=	Compute the beta-binomial cumulative distribution function.
BBNPPF	=	Compute the beta-binomial percent point function.
BETCDF	=	Compute the beta cumulative distribution function.
BETPDF	=	Compute the beta probability density function.
BETPPF	=	Compute the beta percent point function.
BINCDF	=	Compute the binomial cumulative distribution function.
BINPDF	=	Compute the binomial probability density function.
BINPPF	=	Compute the binomial percent point function.
