

I have called noise line a number of times when planes fly directly over my home at appx. 10:30 pm, very low and wake me up. It is especially bad in the summer with windows open. These noisy planes sound like jets and props. I do not know. Other times some smaller jets whip over the house, a little too low and too noisy. When a neighborhood has been in place since 1969 and has to have that disruption, (must stop talking to a neighbor,) that is a problem.

If I wanted that noise, I could have purchased a newer home closer to an airport or near the established flight pattern. My home was here before these noise problems from Centennial.

Thank goodness this is not everyday I hear the loud planes, but hope my established neighborhood is still considered as important since it is in Aurora and not the more "exclusive" areas of Arapahoe County.

I will try to be more aware of the flight patterns and times .

Thank you, Joyce Essex
