

## Aquatic Insect Record

Keep a record of each type of organism you find in your search.

1. Observe and record the descriptive features of the insect you are looking at.
2. Look at the two identification sheets included in your packet. Once you have found an insect that looks like the one you have just described, find it's common name.
3. Identify which group it belongs to. (*Tolerant or Intolerant* of water pollution)

<b>Descriptive features</b>	<b>Common name</b>	<b>Tolerant/intolerant</b>
