| Uranium, total ^h | | 20 | 500 |

^aOnly the radionuclides sought on the Oak Ridge Reservation are listed.

^b40 CFR Part 141 National Primary Drinking Water Regulations Subparts B and G.

^cFour percent of the DCG represents the DOE criterion of 4 mrem effective dose equivalent from ingestion of drinking water.

^dU.S. DOE Order 5400.5 Chapter III Derived Concentration Guides for Air and Water.

^eExcludes radon and uranium.

^fThese values are not maximum containment levels (MCLs), but are concentrations that result in the effective dose equivalent (EDE) of the MCL for gross beta emissions, which is 4 mrem/year.

^gApplies to combined ²²⁶Ra and ²²⁸Ra.

^hMinimum of uranium isotopes.

^b40 CFR Part 143—National Secondary Drinking Water Regulations, as amended.

^cRules of Tennessee Department of Environment and Conservation, Division of Water Pollution Control, Chapter 1200-4-3, General Water Quality Criteria, as amended. CMC = criterion maximum concentration.

^dThese criteria, for the protection of public health, pertain to the consumption of water and organisms. They are applied only to waters designated for *both* recreation and domestic water supply.

^eJackson turbidity unit (JTU) and nephelometric turbidity unit (NTU) are roughly equivalent in the range of 25 to 1000 JTU.

^fThe standard is a function of total hardness. The values in this table correspond to a total-hardness value of 100 mg/L.

^g“Action level” for initiation of corrosion control studies and treatment techniques, applicable to community water systems and non-transient, non-community water systems.

^hStandard no longer numeric, but based on presence or absence in sample.

ⁱSee bis(2-ethylhexyl)phthalate.

^jSee *cis*-Dichloroethene and *trans*-Dichloroethene.

^kLimit for total trihalomethanes (bromodichloromethane + bromoform + chloroform + dibromochloromethane).

^aAll values were included in the calculations. Only parameters that have one or more samples detected are listed in the table. The sampling and analysis plan contains a complete list of analyses performed.

^bPrefix “<” indicates the value for a parameter (excluding organics) was not quantifiable at the analytical detection limit; “U” indicates the value for an organic parameter was undetected at the analytical detection limit; and “J” indicates the value was estimated at or below the analytical detection limit by the laboratory.

^cA tilde (~) indicates that estimated values and/or detection limits were used in the calculation.

^dStandard error of the mean.

^eTennessee General Water Quality Criteria for Recreation and Domestic Use, as amended (CRK 16, CRK 23, CRK 32, CRK 58, CRK 66, CRK 70) or Tennessee General Water Quality Criteria for Freshwater Fish and Aquatic Life, as amended (BCK 0.6, EFK 0.1, EFK 5.4, MEK 0.2, WCK 1.0, WCK 2.6, WCK 6.8). 4% of DOE DCG used for radionuclides, where applicable.

^fNot applicable.

^gIndividual and average radionuclide concentrations significantly greater than zero are identified by an *.

^hThe concentration of gross beta, total radioactive strontium, and tritium observed in May were significantly greater than corresponding values for 1998 and 1997 even when seasonal peaks are considered. Investigation into the event was inconclusive. A field duplicate taken during the event provided similar results; however, an environmental or natural cause for the high concentrations has not been identified. Results for samples collected about two weeks later at nearby Melton Branch locations for an EM activity did not reflect similar concentration elevations.

ⁱRecalculated omitting the May results. See footnote *h*.
