## INTRODUCTION

This is the sixth report of an annual series prepared by the National Hurricane Center (NHC) to provide a source of summarized data on Atlantic tropical cyclones. It will not duplicate the narrative overview of the hurricane season and the description of individual storms which will continue to be published in the Monthly Weather Review.

In addition to data supplied by the National Weather Service, materials have been furnished by the NOAA National Environmental Satellite Services (NESS) Miami office, and the CARCAH (Chief Aerial Reconnaissance Coordination, all Hurricanes).

## OBJECTIVE FORECAST TECHNIQUES

The following tropical cyclone prediction models were used at National Hurricane Center for forecasting motion on an operational basis:

NHC-67 (Miller, Hill, Chase, 1968). A stepwise screening regression model using predictors derived from the current 24-hour old 1000, 700, and 500 mb data, and includes persistence during the early forecast periods.

2. SANBAR (Sanders and Burpee, 1968). A filtered barotropic model using input data derived from the 1000 to 100 mb pressure weighted winds. The model requires use of "bogus" data in data-void areas. The system was modified by Pike (1972) so that the initial wind field near the storm would conform to the current storm motion
3. HURRAN (Hope and Neumann, 1970). An analog system using as a data base the tracks of all Atlantic tropical storms and hurricanes dating back to 1886.

4. CLIPER (Neumann, 1972). Stepwise multiple screening regression using the predictors derived from climatology and persistence.
5. NHC-72 (Neumann, Hope, Miller, 1972). A modified stepwise multiple screening regression system which combines the NHC-67 concept and the CLIPER system into a single model.
6. NHC-73 (Neumann and Lawrence, 1973). Similar in concept to the NHC-72 except it also uses the "perfect prog" and MOS (model output statistics) methods to introduce NMC (National Meteorological Center) numerical prognostic data into the prediction equations
7. NMC MFM MODEL (Hovermale, 1975). A ten-level baroclinic model which uses a moving fine mesh (MFM) grid nested within the coarser NMC fixed grid primitive equation (PE) model. It is capable of predicting both track and intensity changes.

The National Hurricane Center uses the above models as guidance in the formulation of its forecasts. The hurricane forecaster also makes extensive use of analyses and prognoses produced by NMC and RCTM (Regional Center for Tropical Meteorology) in Miami.

#### VERIFICATION

Verification statistics for the 1979 season are shown in Table 1 (Pelissier, 1979). The initial position error in Table 1 is the difference between the operational initial position and that determined during post analysis (best track position). The forecast displacement error is the vector difference between the forecast displacement and the actual displacement computed from best-track positions. The landfall prediction error for the official forecasts is given in Table 2. It is

defined as the distance from the predicted landfall point, made 24 hours prior to actual landfall, to the actual landfall point. In cases where a storm either crossed an island or made landfall when predicted to remain offshore, the error was designated as the distance from the landfall point to the nearest point on the forecast track.

Tropical cyclone warning lead times for United States landfalling storms are given in Table 3a. A summary of warning lead times for the period 1970 - 1979 for hurricanes only and for both tropical storms and hurricanes is given in Table 3b. The length of time between the issuance of the warnings and the time that the center crossed the coast, as determined from the "best track", was taken as the warning lead time. A more complete discussion of the verification of tropical cyclone warning lead times, as well as verifications for individual storms from 1970 - 1977, can be found in the 1977 Annual Data and Verification Tabulation (Lawrence, Hebert, and Staff, 1979).

#### DATA SUMMARIES

A summary of 1979 North Atlantic tropical cyclone statistics is given in Table 4. A subtropical storm which occurred in October is also included. Tracks of 1979 named storms and the October subtropical storm are shown in Figure 1

The best track, initial, and forecast positions for 1979 named storms are in Table 5, along with initial position and forecast errors, and storm average errors.

Table 6 lists all center fix positions and intensity evaluations used operationally at the National Hurricane Center during 1979. Fixes are in chronological order, and include those obtained by aerial reconnaissance

penetrations, satellite (Miami SFSS), and land-based radar. The legend precedes the initial table.

Supplementary Vortex Data Messages which replaced Vortex Profiles in the 1977 Annual Data Tabulation are given in Table 7. A diagram of the paths flown in obtaining these Data Messages is given in Figure 2. The symbolic code for interpreting the Data Messages is given as Appendix A.

Table 8 is an aerial reconnaissance summary for the 1979 season.

Graphs of the lowest central pressure versus time for 1979 tropical cyclones and the October subtropical cyclone are presented in Figure 3.

Daily GOES-2 satellite photographs of 1979 named tropical cyclones and the October subtropical cyclone are shown in Figure 4.

Selected radar photographs of Hurricanes Bob, David, and Frederic are in Figure 5.

#### ACKNOWLEDGMENTS

Main contributors were: Ms Albertha Sanders, who listed the center fixes in chronological order; Dr Joseph Pelissier, who computed the verification statistics; Ms Joan Kerwood and Ms Liliias Wilson, who typed the tables and manuscript.

TABLE 2a Landfall prediction errors for 1979 tropical storms and hurricanes.

STORM NAME	CATEGORY AT LANDFALL	DATE/TIME (GMT) OF LANDFALL	FORECAST ERROR (N.MI.)	LANDFALL LOCATION AND REMARKS
	T.S.	6/23/04		St. Lucia Island. Storm made landfall within 24 hours of developing.
	H	7/11/12		West of Grand Isle, LA. Storm made landfall within 24 hours of developing.
Claudette #1	T.S.	7/17/22		St. Martin Island. Storm made landfall within 24 hours of developing.
Claudette #2	T.S.	7/24/22	25	Near Beaumont, TX
David #1	H	8/29/16	35	Dominica Island. Forecast track was offshore to south.
	#2	H	8/31/20	West of Santo Domingo, Dominican Republic. Forecast track was offshore to south.
David #3	H	9/2/20	50	Andros Island, Bahamas. Forecast track was offshore to southwest.
David #4	H	9/3/16	0	Jupiter, FL.
David #5	H	9/4/22	75	Near Savannah Beach, GA.
Elena	T.S.	9/1/14	50	Near Freeport, TX
Frederic #1	T.S.	9/3/12	110	Barbuda Island. Forecast track was offshore to south.
Frederic #2	T.S.	9/4/12	65	Puerto Rico. Forecast track was offshore to north.
Frederic #3	H	9/6/00	30	Near Santo Domingo, Dominican Republic.
Frederic #4	H	9/13/03	40	Near Mobile, AL.

LEGEND FOR TABLE 6  
Key to fix characteristics

SATELLITE:

Classification confidence\*, location and confidence\*\*, visible or infrared, resolution (Km).

- \*1 = completely certain as to current intensity number used.
- 2 = tempted to vary up or down by  $\frac{1}{2}$  T or S number.
- 3 = might vary up or down by 1 T or S number, or more.
  
- \*\*1 = well defined eye with certain picture registration.
- 2 = well defined eye with uncertain picture registration.
- 3 = well defined circulation center with certain picture registration.
- 4 = well defined circulation center with uncertain picture registration.
- 5 = poorly defined circulation center with certain picture registration.
- 6 = poorly defined circulation center with uncertain picture registration.

RECONNAISSANCE:

Navigational Accuracy/Meteorology Accuracy.

RADAR:

- LCH = Lake Charles, LA
- SIL = Slidell (New Orleans), LA
- GLS = Galveston, TX
- EYW = Key West, FL
- MIA = Miami, FL
- TPA = Tampa (Bay), FL
- DAB = Daytona Beach, FL
- AYS = Waycross, GA
- CHS = Charleston, SC
- AHN = Athens, GA
- AGS = Augusta, GA
- ILM = Wilmington, NC
- AQQ = Apalachicola, FL
- NPA = Pensacola, FL
- MOB = Mobile, AL
- JAN = Jackson, MS
  
- MKPO = Barbados
- MJSJ = San Juan, Puerto Rico

Table 8. Tropical Cyclone Reconnaissance Summary for 1979

1. Requirements Levied	Atlantic	Eastern & Central Pacific
Cyclones	204	3
Invest	<u>19</u>	<u>0</u>
TOTAL	223	3
2. Requirements Accomplished	Atlantic	Eastern & Central Pacific
53 WRS (cyclones/invest)	45/9	0/0
920 WRG (cyclones/invest)	112/9	3/0
RFC (cyclones/invest)	<u>42/1</u>	<u>0/0</u>
TOTAL	199/19*	3/0
3. Missions Flown	Atlantic	Eastern & Central Pacific
53 WRS	37	0
920 WRG	69	3
RFC	<u>18</u>	<u>0</u>
TOTAL	124	3
4. Flying Time	Atlantic	Eastern & Central Pacific
53 WRS	312.0	0.0
920 WRG	698.4	35.5
RFC	<u>189.7</u>	<u>0.0</u>
TOTAL	1200.1	35.5
GRAND TOTAL 1235.6		

\*Of the five unaccomplished requirements in the Atlantic, two were resources permitting.
