## INTRODUCTION

This is the fifth report of an annual series prepared by the National Hurricane Center (NHC) to provide a source of summarized data on Atlantic tropical cyclones. It will not duplicate the narrative overview of the hurricane season and the description of the individual storms, which will continue to be published in the Monthly Weather Review.

In addition to data supplied by the National Weather Service, materials have been furnished by the NOAA National Environmental Satellite Services (NESS) Miami office, and the CARCAH (Chief Aerial Reconnaissance Coordination, all Hurricanes).

## OBJECTIVE FORECAST TECHNIQUES

The following tropical cyclone prediction models were used at the National Hurricane Center for forecasting motion on an operational basis:

1. NHC-67 (Miller, Hill, Chase, 1968). A stepwise screening regression model using predictors derived from the current and 24-hour old 1000, 700, and 500 mb data, and includes persistence during the early forecast periods.
2. SANBAR (Sanders and Burpee, 1968). A filtered barotropic model using input data derived from the 1000 to 100 mb pressure weighted winds. The model requires the use of "bogus" data in data-void areas. The system was modified by Pike (1972) so that the initial wind field near the storm would conform to the current storm motion.
3. HURRAN (Hope and Neumann, 1970). An analog system using as a data base the tracks of all Atlantic tropical storms and hurricanes dating back to 1886.
4. CLIPER (Neumann, 1972). Stepwise multiple screening regression using the predictors derived from climatology and persistence.

Tropical cyclone warning lead times for United States landfalling storms are given in Table 3a. A summary of warning lead times for the period 1970-1978 for hurricanes only and for both tropical storms and hurricanes is given in Table 3b. The length of time between the issuance of the warnings and the time that the center crossed the coast, as determined from the "best track" was taken as the warning lead time. A more complete discussion of the verification of tropical cyclone warning lead times, as well as verifications for individual storms from 1970-1977 can be found in the 1977 Annual Data and Verification Tabulation (Lawrence, Hebert, and Staff, 1979)

#### DATA SUMMARIES

A summary of 1978 North Atlantic tropical cyclone statistics is given in Table 4. A unique subtropical storm which occurred in January is also included. Tracks of 1978 named storms and the January subtropical storm are shown in Figure 1.

The best track, initial, and forecast positions for 1978 named storms are in Table 5, along with initial position and forecast errors, and storm average errors.

Table 6 lists all center fix positions and intensity evaluations used operationally at the National Hurricane Center during 1978. Fixes are in chronological order, and include those obtained by aerial reconnaissance penetrations and radar, satellite (Miami SFSS), and land-based radar

Supplementary Vortex Data Messages which replaced Vortex Profiles in the 1977 Annual Data Tabulation are given in Table 7. A diagram of the paths flown in obtaining these Data Messages is given in Figure 2. The symbolic code for interpreting the Data Messages is given as Appendix A.

Table 8 is an aerial reconnaissance summary for the 1978 season.

Graphs of the lowest central pressure versus time for 1978 tropical

cyclones and the January subtropical cyclone are presented in Figure 3.

Daily GOES-2 satellite photographs of 1978 named tropical cyclones and the January subtropical cyclone are shown in Figure 4.

ACKNOWLEDGMENTS

Main contributors were: Ms Albertha Sanders, who listed the center fixes in chronological order; Ms Mary Watson, who did the pressure-time graphs; Dr. Joseph Pelissier, who computed the verification statistics; Mrs. Charlotte M. Hinderliter, who typed the tables and manuscript.

Table 8. Tropical Cyclone Reconnaissance Summary for 1978.

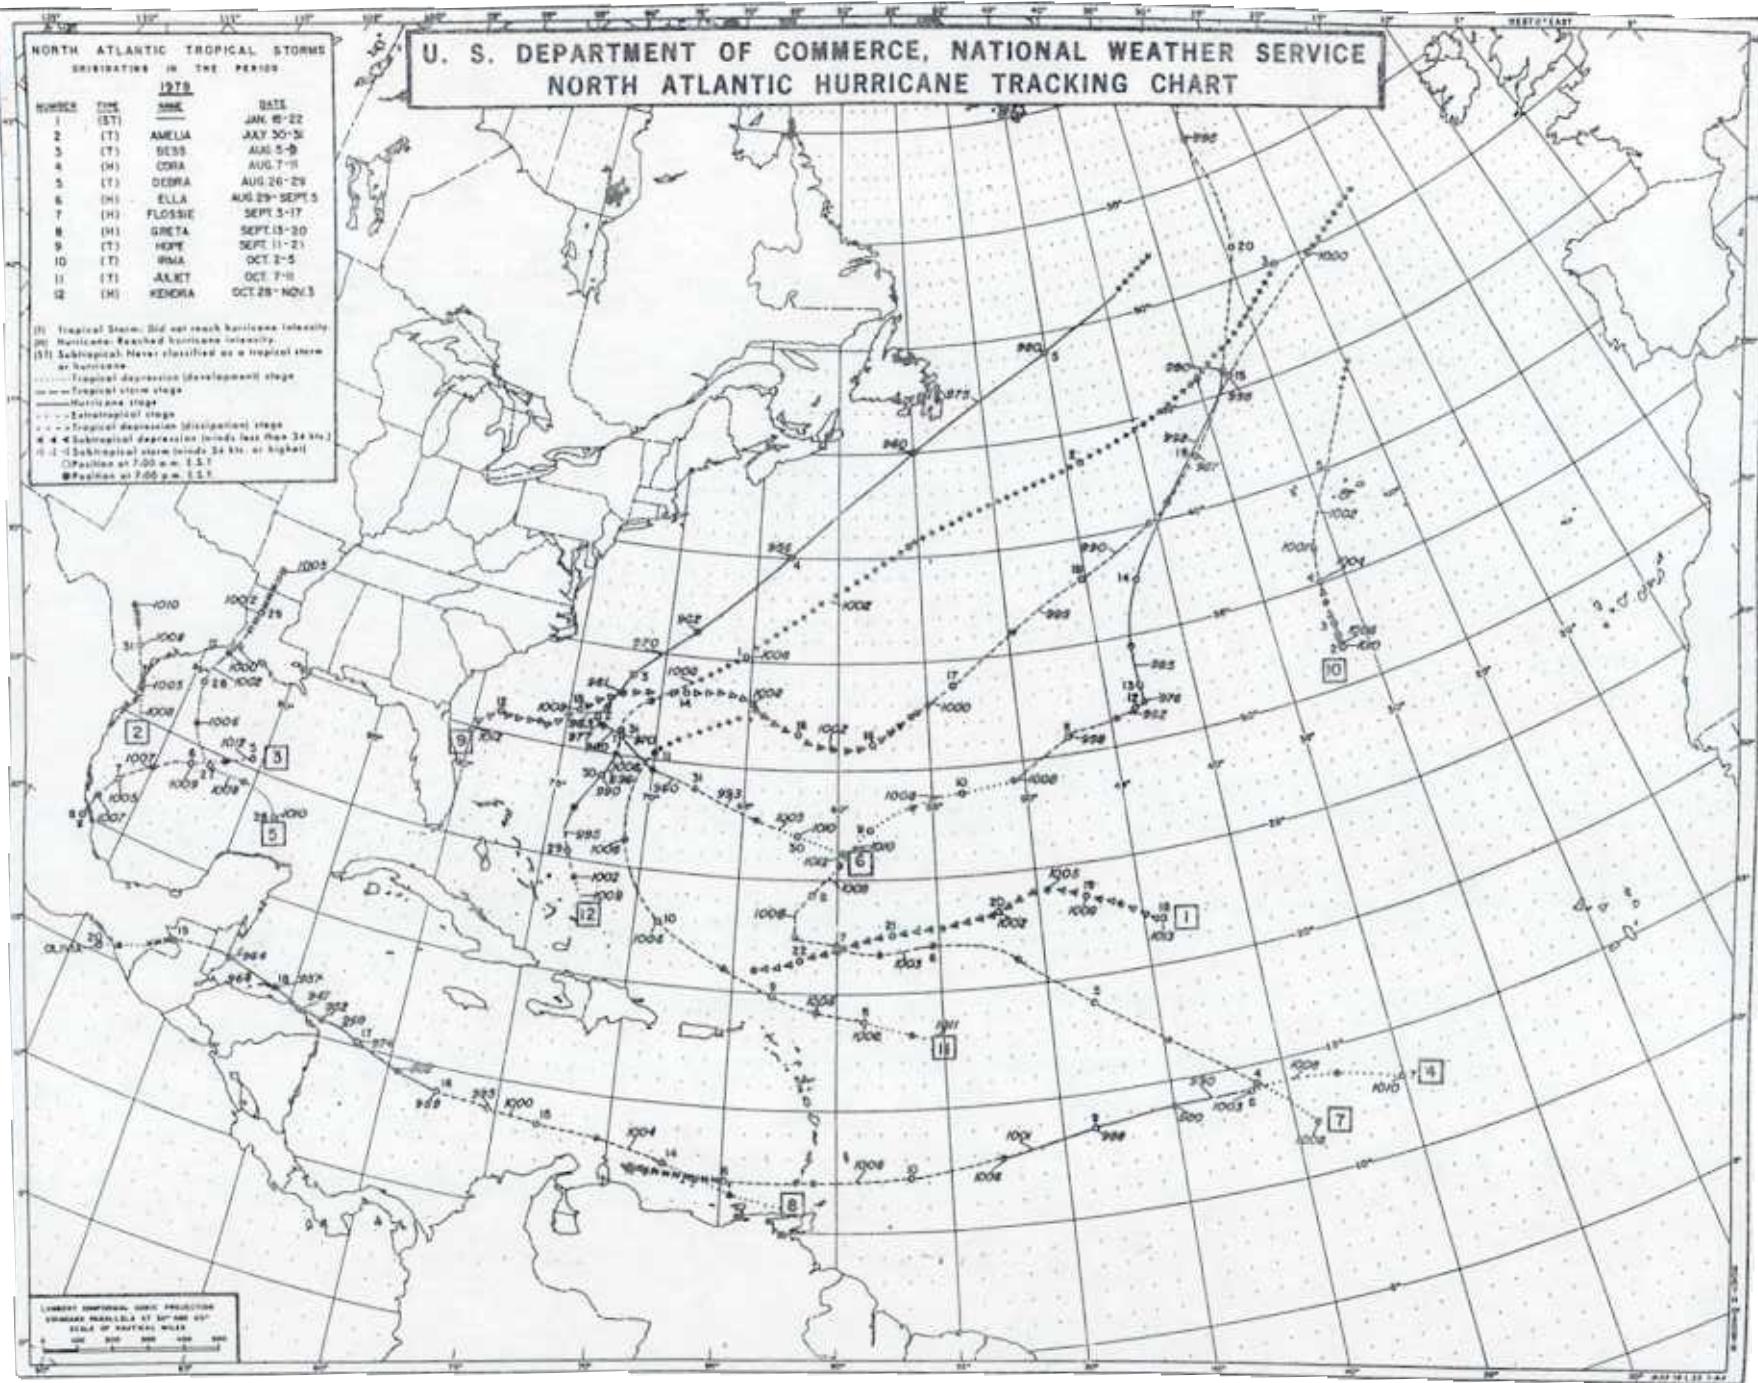

1. Requirements Levied	Atlantic	Eastern & Central Pacific
Cyclones	110	38
Invest	<u>43</u>	<u>0</u>
TOTAL	153	38
2. Requirements Accomplished	Atlantic	Eastern & Central Pacific
53 WRS (cyclones/invest)	19/19	13/0
920 WRG (cyclones/invest)	77/23	24/0
RFC (cyclones/invest)	<u>13/00</u>	<u>0/0</u>
TOTAL	109/42*	37/0*
3. Missions Flown	Atlantic	Eastern & Central Pacific
53 WRS	29	10
920 WRG	66	16
RFC	<u>5</u>	<u>0</u>
TOTAL	100	26
4. Flying Time (Hours)	Atlantic	Eastern & Central Pacific
53 WRS	263.1	95.2
920 WRG	645.0	166.6
RFC	<u>48.3</u>	<u>0.0</u>
TOTAL	956.4	261.8
	<u>+261.8</u>	
	GRAND TOTAL	1218.2

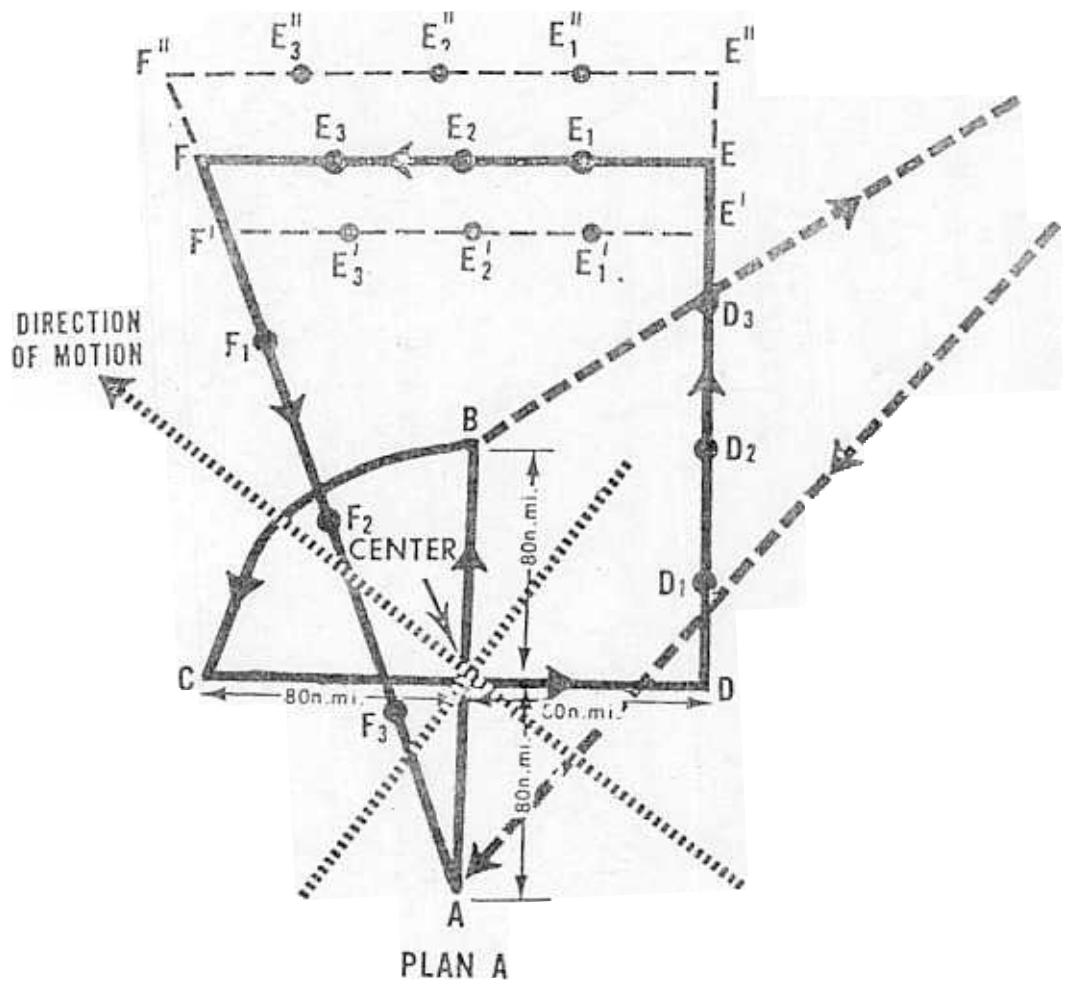

\*Two of the unaccomplished requirements in the Atlantic as well as the one in the Pacific were levied as resources permitting.

U. S. DEPARTMENT OF COMMERCE, NATIONAL WEATHER SERVICE  
NORTH ATLANTIC HURRICANE TRACKING CHART

NORTH ATLANTIC TROPICAL STORMS GENERATING IN THE PERIOD			
NUMBER	TIME (ET)	NAME	DATE
			1978
1	(T)		JULY 16-22
2	(T)	AMELLA	JULY 30-31
3	(T)	DESS	AUG 5-9
4	(H)	CORA	AUG 7-11
5	(T)	DEBRA	AUG 26-29
6	(H)	ELLA	AUG 29- SEPT 3
7	(H)	FLOSSIE	SEPT 3-17
8	(H)	GRETA	SEPT 13-20
9	(T)	HOPE	SEPT 11-23
10	(T)	IRMA	OCT 2-5
11	(T)	ALICE	OCT 7-10
12	(H)	KENDRA	OCT 28- NOV 3

- (B) Tropical Storm: Did not reach hurricane intensity.
- (C) Subtropical Hurricane intensity.
- (D) Subtropical: Never classified as a tropical storm or hurricane.
  - - - Tropical depression (development) stage
  - - - Tropical storm stage
  - - - Hurricane stage
  - - - Extratropical stage
  - - - Tropical depression (disorganized stage)
  - - - Subtropical depression: winds less than 38 mph
  - - - Subtropical cyclone: winds 39-74 mph, or higher!
  - Onset at 7.00 a.m. = SST
  - Peak at 7.00 a.m. = PMSL

FLIGHT ALTITUDES	
A B C D	-- 10,000 FEET
D E F A	-- 1,500 FEET

2. Flight pattern flown in obtaining Supplementary Vortex Data Messages.

Remarks								
CODE FIGURES	dd	True direction in tens of degrees (pattern orientation based on direction of storm motion).						
	zzz	Flight level in hundreds of feet (absolute altitude below 5500 feet).						
	D	Group indicator designating the distance from the center in nautical miles (8-80, 4-45, 3-30, 1-15, Ø-center).						
	hhhh	Height of the eyewall in feet.						
	jHHH	Pressure height data in RECCO format.						
	TTQQ	Temperature/dewpoint in degrees Celsius. Add 50 for negative values.						
	FFF	Maximum observed wind speed in knots.						
	BBBRR	Bearing and range from the center of MXFFF.						
	RRR	Radial extent of 64 kt, 50 kt, and 34 kt winds from the center in nautical miles.						
	//	Data are unknown or unobtainable.
