

A Proposal for a New NARA Service

An Information Portal for the
Secure Storage of
Agency Temporary Records

About NARA

- ◆ The National Archives and Records Administration (NARA) is an independent agency that ensures citizens have access to Government records that document their rights and the actions of their government.

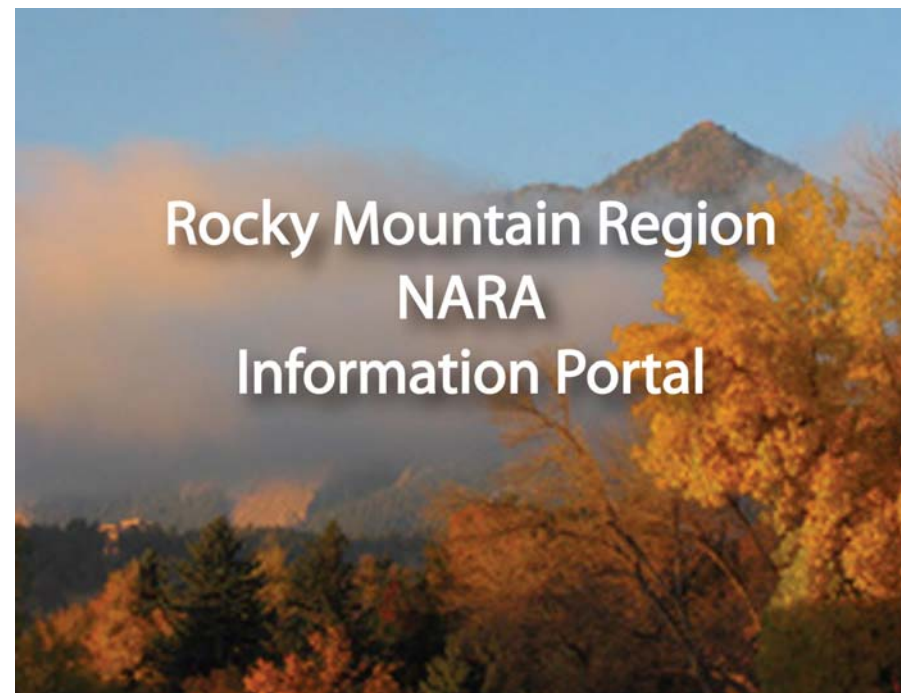

More About NARA....

- ◆ NARA is also responsible for ensuring good management of modern records in all three branches of Government, working with a network of agency records managers.

More About NARA....

- ◆ With this new initiative, NARA's Rocky Mountain Region will be offering quality electronic records services comparable to the same quality of services provided for paper records.

Our Vision

- ◆ NARA's Rocky Mountain Region's "Denver Model" will store and service federal e-records, vital paper, and vital e-records. The facility will be located in a 30 to 60 mile radius from Denver.

Goals and Objectives

- ◆ E-records storage and reference services
- ◆ E-vital records storage and provision for customer access
- ◆ Off-site tape rotation services
- ◆ A COOP alternate site capacity for multiple agencies

Where Are We Today?

- ◆ Agencies asking for temporary e-record storage
- ◆ E-Focus meetings with interested agencies
- ◆ Agencies are interested in sending e-records
- ◆ Discussing our ideas/plans with power resources
- ◆ Agencies/clients willing to assist NARA to achieve E-records storage

Benefits of Agency Assistance

- ◆ Department of Commerce
 - “Low technology risk”
 - Economical space costs if shared
 - Expert Telecom/IT assistance
 - FISMA 2002 Security Compliance
 - Growth path

The Solution

- ◆ A NARA “Information Portal” for the shared use of various government agencies with expert records assistance and user support to clients.
- ◆ The portal would appear to be a natural extension of the clients’ own system, connected to the NARA facility by a secured internet link.

What is a Portal?

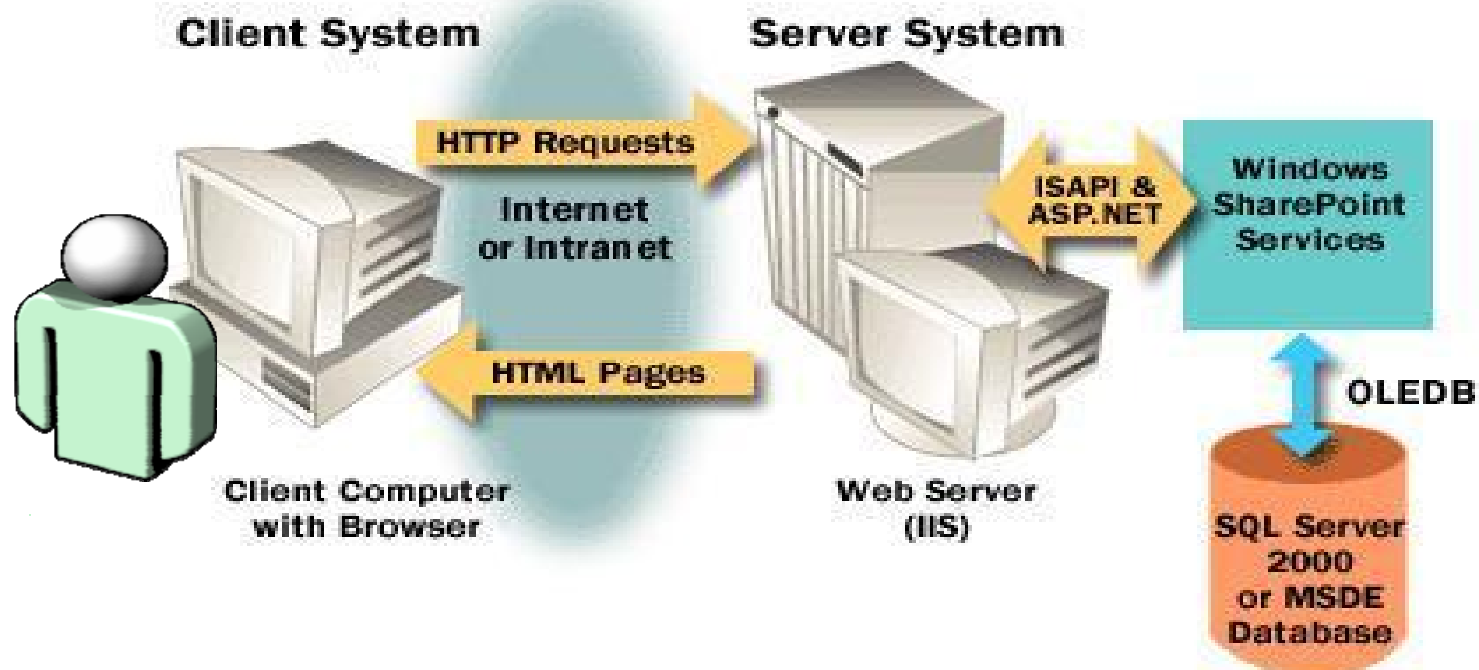

- ◆ **A portal is a website that aggregates contextually relevant information, services and applications**
- ◆ **A portal distills complexity with a variety of information and services available to a user into a single interface, targeted to the user's needs and interests**
- ◆ **Challenge is not to deploy a portal but to equip the enterprise with a comprehensive framework to create, maintain, and modify any type of portal required to meet business needs**

Portal Capabilities

- ◆ eDocument/eMedia Storage
- ◆ All formats!
- ◆ Change Management
- ◆ Content Management
- ◆ User authentication
- ◆ Personalization
- ◆ Application Integration
- ◆ Content Aggregation
- ◆ Search
- ◆ Collaboration
- ◆ Web content management
- ◆ Workflow
- ◆ Analytics
