

Recent References: CODENS and Abbreviations

National Nuclear Data Center, Brookhaven National Laboratory

Document generated: November 15, 2006

This document lists journal “CODEN” information and common abbreviations used in Nuclear Science References (NSR).

For more information, and access to the most recent NSR updates, please visit the NSR web site at <http://www.nndc.bnl.gov/nsr/>.

Journals and Codens

The following list, arranged alphabetically by CODEN, shows journal CODENS and titles that have appeared in NSR since the year 2000. The CODEN strings are used in the short form of reference information given with keywords in the “Recent References” documents.

Abbreviations

The following abbreviations are commonly used in NSR keywords.

Ay,Ayy,iT ...	- analyzing powers
BCS	- Bardeen-Cooper-Schrieffer
BUU	- Boltzmann-Uehling-Uhlenbeck
ce	- conversion electron
CPT	- charge-parity-time
DSA	- Doppler-shift attenuation
DWBA	- distorted-wave Born approximation
DWIA	- distorted-wave impulse approximation
E γ , E α , Ep	- gamma, alpha, proton energies
EC	- electron capture
GMR	- giant monopole resonance
GDR	- giant dipole resonance
GQR	- giant quadrupole resonance
GDH	- Gerasimov-Drell-Hearn
HFB	- Hartree-Fock-Bogoliubov
hfs	- hyperfine structure
I γ , I β	- gamma, beta intensities
IAR	- isobaric analog resonance
IAS	- isobaric analog state
IBM	- interacting boson model
IBA	- interacting boson approximation
ICC	- internal conversion coefficient
IT	- isomeric transition
H	- magnetic field
n-bar, p-bar	- antineutron, antiproton
OZI	- Okubo-Zweig-Iizuka
PWIA	- plane-wave impulse approximation
Q α , Q β	- α -, β -decay Q-value
QCD	- quantum chromodynamics
RPA	- random phase approximation
σ	- cross section
SUSY	- supersymmetry
θ	- indicates angular dependence
TDA	- Tamm-Dancoff approximation
