Description:					
 and resort communities (second homes) are largely overlooked by census data. Data source: Census (http://www.gis.state.or.us/data/2000_census.html), Private Ownership (Western Forest Ownership:http://www.gis.state.or.us/data/alphalist.html , Eastern Oregon: Land, Public Ownership: http://www.gis.state.or.us/data/alphalist.html)Rod (Census Line Feature - Roads (to obtain address attributes)(http://www.esri.com/data/download/census2000_tigerline/), Tribal lands (http://arcdata.esri.com/data/tiger2000/tiger_statelayer.cfm). Process used: Convert owner and road data to grid, generate distance to roads, query for lands with population, on private land (non-industrial private in western Oregon), within ¼ mile of roads, OR any land within an federally recognized Indian reservation with ¼ mile of a road segment with zip code attribute, convert to shape, calculate population density for each census block based upon "new" area (private land near roads), delete isolated polygons with fewer than 8 people, reclassify density into WUI_Code.shp as follows: Population Per Square Mile, 0=0 (unpopul), 0.1-28=1 (scattered), 28-111=2 (rural), 112 -560=3 (suburban), 560 - 3731=4 (urban); 3732+=5 (non-forest). Life grid rating: WUI code 0 or 1 = 1, wui code 2 or 3 = 3 wui code 4 or 5 = 3See GIS Process for Identifying Communities At Risk.doc Purpose: Oregon Communities At Risk assessment for 2004 for the National Fire Plan. Life factor is a component of the Value Rating. Access Constraints: None Use Constraints: None
