

Oregon Renewable Energy Working Group Recommendation

RE: Net metering

The Oregon Renewable Energy Working Group believes that net metering is essential to the advancement of small scale renewable energy systems. It recommends the Oregon Public Utility Commission implement net metering rules for PGE and PacifiCorp that meet the following key criteria:

1. Remains simple for utilities to implement and consumer friendly
2. Establishes Oregon as a leader in net metering policy
3. Requires annualized net metering
4. Prior to setting a size limit the PUC should review the New Jersey net metering standard. Currently NJ has established the leadership position with regard to net metering policy.
