The DUII Data Book for Oregon Counties has been compiled by the staff of the Oregon Department of Transportation, Transportation Safety Division (ODOT-TSD) to assess the severity of Driving Under the Influence of Intoxicants (DUII) related problems in Oregon counties.

Crashes involving alcohol and/or other drugs account for nearly half of the fatal and serious injury crashes occurring in Oregon each year. Many of these crashes involve youth that are inexperienced both as drinkers and drivers. Though these problems are not unique to the state of Oregon, Oregonians are taking a "hard line" on alcohol and/or other drug-related fatal and injury traffic crashes.

Driving Under the Influence of Intoxicants (DUII) is a complex social problem that has origins in both internal and external system factors. Due to its complexity, Oregon communities and involved agencies must concentrate on addressing the negative reinforcing DUII variables. Chief among these variables are: 1) system deficiencies in dealing with the intoxicated driver, and 2) the public's knowledge, attitudes and behavior relating to impaired driving.

The DUII Data Book for Oregon Counties seeks to present data compiled from a number of state agency sources that may be used in conjunction with alternative sources, such as attitude and perception surveys, to analyze and identify DUII-related problems. With this information, in addition to input received from involved agencies and groups, it is hoped that specific problems will be identified and targeted for special countermeasure efforts.

The DUII Data Book for Oregon Counties is designed to be used by persons familiar with the DUII control system in Oregon. The information presented in this document is intended to provide comparative data on Oregon counties for assessment of DUII-related problems and countermeasure activities. It can also be useful in obtaining support for county traffic safety programs by providing a comparison of the severity of the major traffic safety problems from county to county and to the state as a whole.

The seven DUII system areas considered are:

- Crashes
- Enforcement Activity
- Implied Consent Suspensions
- Diversion Program
- DUII Convictions
- Additional Court Activity
- Youth Under 21 Years of Age

A series of data tables has been constructed to summarize data representative of the DUII system for each county in Oregon. Use the data cautiously and only after you have reviewed the "Document Citations and Notations" contained in the Appendix. Data from different sources and/or different time periods may not necessarily be comparable. In some instances, data tables are missing one or two system elements because the data elements were unknown, unreported, not applicable, or not available.

Data can be the basis for a complete analysis of the DUII control system in your county. It can be used to answer such questions as:

- Are fatal and injury crashes increasing or decreasing?
- Is the change significantly different than for other similar sized counties or the state as a whole?

Simple statistical techniques such as normalizing data from two different sized populations and performing chi square analysis can make such analysis more meaningful. Chi square analysis is used to determine if the difference between two different occurrences over time, or between one area or another or two or more different data elements is significant. Other questions might call for relating two or more different kinds of data, such as offenses, arrests and convictions.

You will find that the data will not only help you answer questions about how the DUII system is operating in your county, but will lead you to raise additional questions. It may encourage you to do additional research. If more detailed data is needed, contact either the source cited or Transportation Safety Division staff.

- Fatal and injury traffic crashes decreased from 23,087 crashes in 1997, their highest point in 10 years, to 20,166 in 2006. The fatal and injury crash rate for Oregon (crashes per million vehicle miles traveled) has declined from 73.2 in 1997 to 56.8 in 2006.
- Nighttime fatal and injury crashes have increased by 3.0% from 2,904 in 1997 to 2,993 in 2006.
- The percent of fatalities that were determined to be alcohol-related has decreased from 42.9% in 1997 to 37.4% in 2006.
- DUII offenses have increased by 10.4% from 22,721 in 1997 to 25,091 in 2006, while Oregon's population increased 14.7% during the same period.
- DUII arrests for drugs, other than alcohol, have increased 66.6%, from 604 in 1997, to 1,006 in 2006. This marked increase is due, in part, to the Drug Recognition Expert Program which trains officers to recognize impairment due to intoxicants other than alcohol.
- Breath test refusals decreased 14.4%, from 3,365 in 1997 to 2,882 in 2006.
- The number of diversion agreements has increased by 9.4%, from 10,758 in 1997 to 11,772 in 2006. This represents approximately 47% of the offenses every year.
- DUII convictions have decreased from their highest point in 10 years in 1997, when 10,358 offenders were convicted of DUII, to 9,878 in 2006. The percent of convictions that were for a third or subsequent DUII has decreased from 6.6% in 1997 to 4.0% in 2006.
- The number of treatment enrollments for persons convicted of DUII has decreased from 12,825 in 1997 to 8,884 in 2006. In 2005, 99.3% of the enrollments were in rehabilitation treatment programs.
- Fatalities of youth under 21 years of age have decreased significantly from 109 in 1997 to 86 in 2006. There were 27 alcohol related fatalities reported for youth under 21 in 2006.
- Minor in Possession (MIP) citations numbered 12,132 in 1997 and decreased to 7,638 by 2006. In 2006, 2,275 juveniles were actually denied their license privileges.

Crashes involving alcohol and/or other drugs account for nearly half of the fatal and serious injury crashes occurring in Oregon each year. Many of these crashes involve youth that are inexperienced both as drinkers and drivers.
