

- **Did you grow up near the Hanford Nuclear Reservation?**
- **Were you born between 1940 and 1951?**

If so, there is an important new resource for you to learn more about potential exposure to radiation (radioactive iodine 131) released from Hanford. Here's how you can learn more about the releases and make more informed health care choices.

Visit www.hanfordhealth.info. The site has important educational resources about exposure to I-131 including:

- A self assessment tool – A quick, easy-to-use guide to help you learn if you were exposed.
- HCHP mailing list sign-up form – Sign up to get HCHP materials and periodic project updates.
- A variety of educational materials about the releases from Hanford so you can work with your physician to make more informed health care choices.

Call the HCHP toll-free information line at 1-800-207-3996 to request materials and join the project mailing list.

Please pass this on to family or friends who might be interested in this information.

About HCHP

The Hanford Community Health Project (HCHP) is an outreach and education initiative sponsored by ATSDR (Agency for Toxic Substances and Disease Registry). The project provides educational resources to individuals, and their health care providers, who were exposed as young children to radioactive iodine (I-131) released from the Hanford Nuclear Reservation in south central Washington state. The focus is on releases of I-131 that took place between 1944 and 1951. The project's goal is to assist concerned individuals and their health care providers in making informed health care choices concerning these exposures. For more information visit www.hanfordhealth.info.
