Guidance on Alternatives to Lot Release for Licensed Biological Products

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is describing its current practices governing lot release for licensed biological products. This document describes the information that should be submitted by manufacturers of licensed biological products and the approach that FDA's Center for Biologics Evaluation and Research (CBER) is using when evaluating alternatives to lot release. CBER's decisions in this regard are based on a continued assurance that the safety, purity, and potency of the product will be maintained. This action is being taken in response to requests for guidance on alternatives to lot release. FDA invites comments on this guidance statement.

DATES: Submit written comments by September 20, 1993.

ADDRESSES: Submit written comments and information to the Dockets Management Branch (HFA–3051), Food and Drug Administration, rm. 1–23, 12420 Parklawn Dr., Rockville, MD 20857. Submit product license application amendments requesting alternatives to lot release and sample submission requirements to the director of the application division within the office having primary jurisdiction over the product (e.g., Office of Therapeutics, Office of Vaccines, or Office of Blood), Food and Drug Administration, Center for Biologics Evaluation and Research, 1401 Rockville Pike, Rockville, MD 20852–1448.

FOR FURTHER INFORMATION CONTACT: JoAnn M. Minor, Center for Biologics Evaluation and Research (HFM–835), Food and Drug Administration, 1401 Rockville Pike, Rockville, MD 20852–1448, 301-295-9074.

SUPPLEMENTARY INFORMATION: FDA is describing its current procedure for considering requests from manufacturers regarding alternatives to the submission of samples and of protocols that show results of applicable tests (commonly called "lot release") as set forth in 21 CFR 610.2. This notice
also responds to requests for guidance on what information should be provided when submitting such requests.

Introduction

Under section 351(d) of the Public Health Service Act (42 U.S.C. 262(d)) an establishment may be issued a license to manufacture a biological product only after showing that the establishment and product meet standards designed to ensure that product's continued safety, purity, and potency. Therefore, a manufacturer of a biological product subject to a license must demonstrate supervision and control of the entire manufacturing process to ensure, among other things, that contaminants are not introduced during production and that there is lot-to-lot consistency in the quality of the licensed product (see 21 CFR part 600 et seq.).

Under § 610.2, manufacturers may be required to submit samples from all lots of a licensed biological product together with the protocols showing results of applicable tests when deemed necessary by the Director, CBER. For most biological products, CBER has required the submission of this information both in support of a license application and for continued lot release following product license application approval. In these instances, a manufacturer may not distribute any product until the Director, CBER, issues an official release for the lot.

Guidance and Rationale

Biological products historically have been primarily complex mixtures produced by living organisms. The products have ranged from whole blood for transfusion to allergenic extracts, vaccines, and recombinant therapeutics. Current technology enables industrial scale production of biological products which are more easily characterized using reproducible methodology. In addition, improved analytical techniques are available for characterization of starting materials as well as final products, and efficient methods of purification can reduce levels of process-related impurities to a minimum.

Current technology combined with the experience derived from years of product-specific inspections and testing in CBER laboratories has demonstrated that, for some biological products, alternatives to requiring a CBER release action for every lot provide adequate control to ensure continued safety, purity, and potency (including effectiveness). Therefore, manufacturers meeting the assurances described in this document may submit product license application amendments requesting approval of alternatives to the lot release requirements set forth in their license. Such product license application amendments may be submitted once a manufacturer has documented an acceptable history of lot release and control of the manufacturing facility. The definition of acceptable lot release history will vary according to the product and the complexities of the manufacturing process. CBER considers granting requests for alternatives to lot release only upon demonstration that the alternative approach does not compromise the safety, purity, and potency of the biological product.

Specific questions should be addressed to the office with product responsibility prior to submission of an amendment requesting alternatives to lot release.

In addition, there should be a history of FDA establishment inspections that have shown compliance with applicable regulations during the period covered. The period considered may vary by product, because the number of lots produced in a given time may vary, as may the extent to which lot release procedures are viewed as important for ongoing assurance of safety and efficacy. CBER recognizes that the need for submission of lot release protocols and/or samples may be greater for some products than others, e.g., products where maintenance of consistent specifications from lot-to-lot is difficult and/or where insufficiency of correlation is available between measurement of potency and biological activity. The experience reflected in both the number of lots produced and the period of production is important to assess the potential value of the lot release procedures for a particular product or product class.

The following data should be submitted in the form of a product license application amendment covering an adequate period of time and a sufficient number of product lots:

1. A well-organized table containing a testing summary of all lots manufactured, including lots manufactured in support of licensure.
2. This testing history should include both lots submitted to CBER for release action and lots or batches rejected during in-process, bulk, or final testing at the manufacturing establishment.
3. A summary of the disposition of the above lots, including the reason a final lot was not submitted to CBER for release or an in-process, or bulk lot or batch was rejected.
4. A list of any lot(s) which was subject to recall or market corrective action following distribution.
5. A description of any major process change, including when the process change was implemented and a list of lots manufactured using the new procedure.

After evaluating a license amendment requesting permission to use alternatives to lot release, CBER may determine that routine submission of lot release protocols and samples is not necessary if the submission describes alternatives which provide continued assurance of safety, purity, and potency. CBER may consider whether there is a need for manufacturers to submit samples and protocols at specific intervals (e.g., quarterly) for surveillance purposes. Such lot s should be selected in each period, or as instructed by the Director, CBER. Regardless of CBER's determination on submitting lot release protocols and/or samples, the manufacturer is required to maintain sufficient records, retention samples, and stability test samples as stated in 21 CFR 211.170 and 211.180.

The approach described above is based upon a retrospective analysis of lot release history at CBER, including a comparison of the number of lot failures to the total number of lots tested. Where a major change in manufacturing process or establishment is proposed or has occurred which requires an amendment, CBER may consider reimposing the requirement for submission of lots for release in addition to lots submitted in support of the amendment. Furthermore, if a product surveillance sample is tested and fails a required test or established specification, the product may be subject to recall by the manufacturer.

CBER is currently applying the approach set forth in this notice. This notice provides information about, but does not set forth specific requirements for, the submission of a product license amendment requesting permission to use alternatives to lot release. FDA does not intend for this guidance to be comprehensive. All information in this
guidance may not be applicable to all situations.

This notice is intended as guidance to manufacturers of biological products filing product license amendments to request alternatives to lot release. If a manufacturer believes that the factors described in this guidance are inapplicable to a particular product and other factors are appropriate for CBER's consideration, the manufacturer may wish to discuss the matter further with the agency to prevent expenditure of money and effort on activities that later may be determined to be unacceptable by FDA.

This guidance does not bind the agency and does not create or confer any rights, privileges, or benefits for or upon any person, manufacturer, or organization.

Interested persons may, on or before September 20, 1993 submit to the Dockets Management Branch (address above) written comments and information on this guidance statement. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments and information should be identified with the docket number found in brackets in the heading of this document. The notice and received information and comments are available for public examination in the office above between 9 a.m. and 4 p.m., Monday through Friday.

FDA will consider any comments received in determining whether amendments to the guidance statement are warranted. As warranted, FDA will announce the availability of any revised guidance statement in the Federal Register.

Dated: July 14, 1993.
Michael R. Taylor, Deputy Commissioner for Policy.

Advisory Committees; Notice of Meetings

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: This notice announces forthcoming meetings of public advisory committees of the Food and Drug Administration (FDA). This notice also summarizes the procedures for the meetings and methods by which interested persons may participate in open public hearings before FDA's advisory committees.

MEETINGS: The following advisory committee meetings are announced:
