## Introduction

The Oregon Department of Transportation prepared the 2007-2009 Highway Construction Plan in accordance with ORS 184.654 to 184.666. The 2007-2009 Highway Construction Plan is a component of the department's budget for the 2007-2009 biennium.

The Highway Construction Plan describes specific projects the department will implement during the 2007-2009 biennium in five components of its Highway Program: Bridge, Highway Safety, Modernization, Operations and Pavement Preservation. Projects in the Highway Construction Plan were selected using the public involvement process of the Statewide Transportation Improvement Program (STIP), including consultation with local governments.

As the department implements its 2007-2009 biennial budget, the department will make status reports on implementation of the Plan to the Legislature after the end of each quarter. The quarterly status reports will also notify the Legislature of any projects that the department intends to implement that were not listed in this initial 2007-2009 Highway Construction Plan.

The Plan lists the projects that are located in each county. The entry for each project provides the project location, a brief description, its work type (Bridge, Highway Safety, Modernization, Operations and Pavement Preservation), and its current status. A project's status is:

- Construction Complete: Project is complete, but may still be pending final payment to the contractor.
- Under Construction: Construction work has started, or is scheduled to start, and a contractor has been awarded the construction contract.
- Construction Funding Committed: Project is either anticipated to go to contract within the biennium or pre-construction work is anticipated to begin during this time frame.
- Under Development: Project has received Oregon Transportation Commission approval to begin preliminary development work, but is not approved for construction funding.

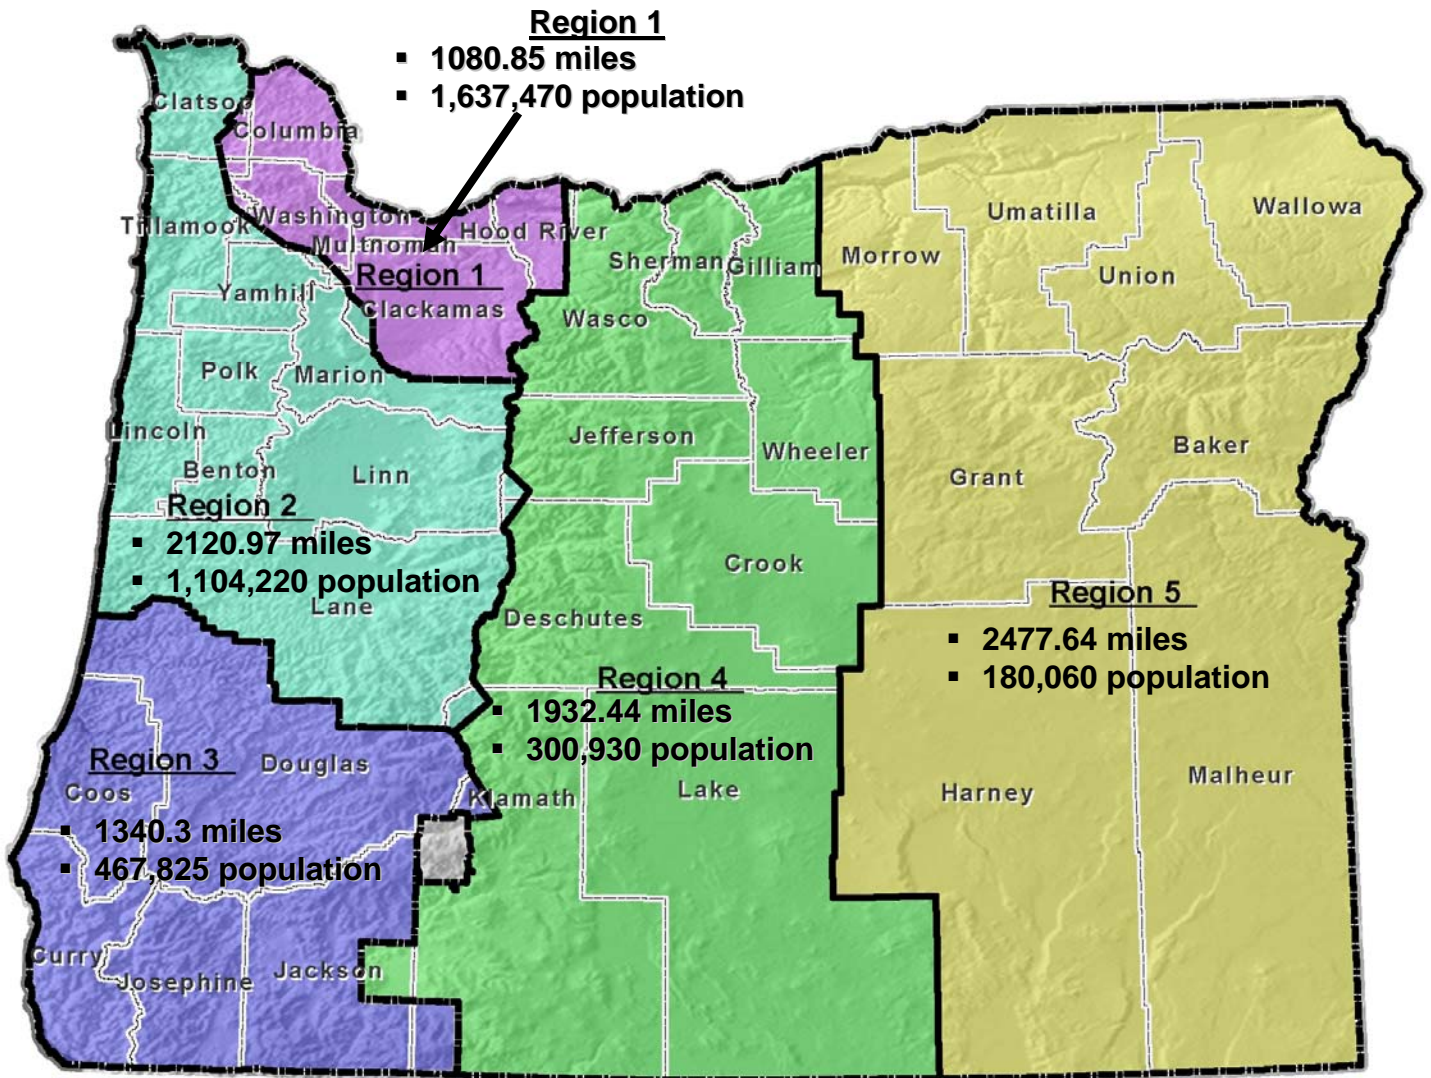

The milestone dates of Design Completion and Construction Completion are provided. For the purposes of this report, Design Completion date is when the department issues a "notice to proceed" to the construction contractor. The department does not select a construction contractor for "Design Only" projects; the Design Completion date indicates when the project design was completed. The Construction Completion date is when the department notifies the contractor that the project is substantially complete.

Project names and work descriptions have been modified throughout the document in order to improve readability. Because of this, some projects may not appear consistently in prior department publications.

**County:** Projects are grouped by county.

**Work Type** identifies the category of work.

**Project Cost** includes design, land purchase, and construction costs.

**Key** is an ODOT unique project identification number.

**Region** identifies the ODOT region.

**Status** identifies the funding category.

**Section Name** details the highway where the project is located, and the common name of the project.

**Project Description** details what the project will accomplish and more specifics about the project location. Also identifies the legislative and congressional districts where the project is located. Entries with a "V" imply the project covers multiple or various districts.

**Estimated or Actual date of Design Completion** identifies when the project NTP (Notice To Proceed) is expected to be given to the contractor, and construction may begin, or when NTP actually was issued.

**Estimated or Actual date of Construction Completion** is when the project is expected to be completed and open to the traveling public, or when the construction was actually completed. For projects Under Development, this completion date is when the development work will be completed.
