Key Messages:

- All homes have dust.
- Dust can contain allergens such as dust mites, animal dander and mold.
- Dust can also carry other substances that may harm a child’s health, such as lead, pesticide residue and other toxic chemicals.
- Dust can make asthma worse when it is breathed into the lungs.
- Controlling dust can be a very important way to help control asthma.
- Control dust by 2 strategies:
  - Don’t let it get into the house (control track-in).
  - Get rid of the dust in the house by effective cleaning.

CAS/CHW Actions:

- Assess prior education received by client and client’s knowledge.
- Perform 3 spot test. Record results on 3 spot test form & turn in results for data entry.
- Demonstrate: halogen light dust demonstration (instructions below).
- Ask client to try vacuum and all the attachments. Assess that they are using the proper technique.
- Educate/demonstrate vacuum use.
- Assure that client completes and encourage them to mail the warranty card.
- If caretaker has allergies or asthma, refer to Dust Mask Protocol.

CAS/CHW Future Visits: Assessment

- Assess frequency of vacuuming, especially in child’s bedroom.
- Ask how vacuuming is going and if the client has any questions on how to use the vacuum or the attachments.
- Ask client to demonstrate vacuuming techniques. Observe vacuuming technique.
- Demonstrate how to vacuum, if needed.
- Ask if the client is using the dust sensor light to guide vacuuming. Is the light
turning green? How long does it take?

- Perform the three-spot vacuum test in same location as previous visit. Record the results on the 3 spot test form & submit results for data entry.
- Assess if client needs help with vacuum maintenance. Topics include: use of the instruction book, checking to see how full the bag is, changing vacuum bags & cleaning the sensor plate by wiping with cloth.

**CAS/CHW Future Visits: Actions**

- Discuss progress made in controlling dust since last visit based on 3 spot results & observation.
- Demonstrate how to check the belt. Advise checking the belts for tightness when changing bags and to replace the belts when they are broken or slack.
- Review the importance of cleaning both the secondary and final filters of the vacuum.
- Demonstrate how to clean the lens of the vacuum dust sensor.
- Demonstrate how to clean the agitator by removing and/or cutting strings and debris from around agitator.
- Change the vacuum belt at the one-year exit visit.

**Recommended Client Actions:**

- Install and use doormat. Clean on both sides once a month.
- Remove shoes when entering house.
- Vacuum floors and furniture:
  - 2 times a week - child’s bedroom
  - 1 time a week - other floors and furniture
- Dust:
  - 2 times a week - child’s bedroom & play area
  - 1 time a week – other rooms
- Make sure your child with asthma is out of the house (or at least the room) when you vacuum or dust, and for 20-30 minutes after you finish. This allows time for the dust and allergens, which may have gotten airborne during cleaning, to settle.
- Fill in and mail vacuum warranty card before end of visit.
- Maintain vacuum regularly.
**Supplies:**

- Vacuum
- Door mat
- 3 Spot Test form
- Halogen Light
- Extra Vacuum belt
- Vacuum bag - Note: Some clients may need more if really motivated.
  
  CAS/CHW may decide on how many bags to give -3 maximum.

**Educational Handouts:**

- Vacuuming technique
- Repair flyer
- PH-S&KC Poster “Please Take Off Shoes Here”

**Referrals:**

- None

**Background:**

- When dust is disturbed, it rises into the air. Once in the air, it can be breathed into the lungs.

- Cleaning can set off allergies and asthma by temporarily raising dust in the air. If the person doing the cleaning has allergies or asthma, s/he may want to use a dust mask (see dust mask protocol).

**HALOGEN LIGHT DUST DEMONSTRATION:**

- Dim lights in a carpeted room. Shine the halogen light above surface of carpet to see how much dust is in the air.

- Ask client to walk or stomp on the carpet.

- Shine the light above surface of carpet to demonstrate that dust can be released from the carpet into the air.

- This demonstration may also be done by striking upholstered furniture.
How to perform the 3 spot test:

- Select a room. First choice location is the child’s bedroom, but if there is no carpet there, use the carpeted area where the child spends most of his or her time.
- Select the 3 spots to test. Spots should be at least 3 feet away from each other. Note the locations on the 3 spot-test form, labeling them as “1”, “2”, and “3”. Estimate the distance between the spots.
  - Hold the vacuum stationary & set the lever to the level appropriate to the type of carpet as follows:
    - Hard flooring = only hard flooring such as vinyl or tile
    - Next large tick mark up = level loop
    - The next large tick mark up (middle of scale) = plush carpeting
    - The next large tick-mark up = shag carpeting.
    - Note – For combination carpets (those with plush and level) use plush setting.
- Use a stopwatch and record the amount of time it takes in each spot for the green light to come on.
- There is a 3-minute maximum time for the 3 spot test. If the light has not turned green after 3 minutes, turn the vacuum off and check the “3 minutes or longer” box.

To control track-in of dust:

- Take shoes off as soon as you enter the door.
- Store the shoes near the doorway on a rack or on the floor.
- Use a commercial-quality doormat.
- The best mat is 2’ x 3’, is made of dense level-loop woven nylon pile, and has non-slip rubber backing. A piece of level loop or plush carpet is an option. Rubber or coco mats don’t work well.
- Place the mat inside the doorway, or outside where it will not get wet.
- Wipe feet twice on the mat when entering.
- Make sure everyone, including kids, uses the mat.
- Vacuum the front & clean or vacuum the backside of the mat once a month. This is best done outside.
To get rid of dust in the house:

- Dust:
  - 2 times a week - child’s bedroom & play area
  - 1 time a week - other rooms
- Dusting can be done with a dust cloth but a Grab-It® cloth or a Swiffer® cloth can hold onto the dust without letting it disperse into the room. Use a damp dust cloth, a Grab-It® cloth or a Swiffer® cloth to dust vinyl or leather furniture.
- Dust articles in the room that are higher up from the floor before dusting articles that are at a lower level.
- Dusting before vacuuming will allow dust that has fallen to be picked up by the vacuum.
- Using correct vacuuming technique, vacuum floors and cloth-covered furniture:
  - 2 times a week - child’s bedroom
  - 1 time a week - other floors and furniture
- Clean rugs regularly (more on this another visit).

Using a dust mop instead of the vacuum:

- Never pick up the dust mop while mopping. That will release the dirt back into the air, and it will again settle on the floor.
- Take the mop outside when finished and shake it out to release the dust.
- Some people like to use a large wet mop with a terrycloth cover that is especially designed for hardwood floors instead of a dry dust mop. If you do, it works well if you wet the mop with a little dish soap mixed with water.
- Swiffers® or Grab-it® cloths and the floor-cleaning tool that is sold with them can be used to remove dust from wood floors.

About vacuums:

- A low-emission vacuum is the best type for people with asthma because it has a special filter that keeps all the allergens in the dust collected by the vacuum in the machine.
- Regular vacuums allow some of the allergens to leak back out in to the air.
• It is still better to use a regular vacuum compared to not vacuuming at all. If you use a regular vacuum, you can use allergy-filtration, double-layer bags inside the vacuum. These will help cut down on the amount of allergens that leak out.

• It may take a lot of time to get the dust out of the house the first time, but once the house is clean, it’s quicker and easier to keep it clean.

• Avoid vacuuming rug fringe, blind cords, string, yarn, coins, paper clips, gum, electrical cords (including one from vacuum cleaner).

• Never vacuum water, other liquids or wet objects.

• If the electrical cord gets caught in vacuum, turn off vacuum using switch, unplug immediately and release cord. If damaged, repair or replace cord.

• Unplug the vacuum cord at wall and pull only on plug, not on the cord. If plug comes loose from cord, replace it.

• Rewind the vacuum cord after each use.

**How to Vacuum:**

• Turn the vacuum on and off by using the switch. Turning the vacuum off by pulling the plug out of the wall socket will leave the dirt finder light “on” and the battery will run down.

• The “Embedded Dirt Finder” indicator should be on “Hi” to get out high levels of dirt or ground-in dirt that may be underneath the carpet.

• Check vacuum bag before each use and replace bag when indicator is red or bag is filled to the dotted line on the bag.

• The vacuum is meant only for picking up dust. Pick up toys, debris and large pieces of trash before vacuuming. Don’t use the vacuum to pick up large pieces of debris.

• Vacuum a 3 by 3 foot square in forward and back motion until green light comes on and stays on. Move the vacuum as follows:

1. You are here

Then the same square:

2. You are here
• Go back and forth once over one strip, starting at the bottom of the square. Then move the vacuum over to the right and go back and forth over the next strip, until the whole area is covered.
• Start over again on the left and repeat the whole pattern until the green light comes on and stays on.
• When the entire area has a green light, move the vacuum to the side of the same square and repeat the pattern (at 90 degrees from the first pattern) until the green light goes on.
• Move to the next square area and repeat.
• If each square takes a long time to clean, you can work on one square at a time. It all does not have to be done at once. The areas nearest the door will take longest to clean, so you might start in the middle of the room. It is better to clean a small area well than to try to clean a large area and not get to the dust deep in the carpet.

牢固的

leting

rof

vaccum

USING THE VACUUM ON AREA RUGS:
• Use the carpet height setting appropriate to the type of carpet.
• Stand on one end of the rug to hold it in place. Move the vacuum with only forward strokes. Push down on the handle before reaching the edge of the rug to lift the vacuum off of the rug. This will keep the rug from being gripped by the vacuum.
• Avoid the fringe with the vacuum. To clean the fringe, use the dusting brush on the hose and vacuum parallel to the fringes.

牢固的

leting

rof

vaccum

USING THE VACUUM ON HARD FLOORS (SUCH AS VINYL, LINOLEUM OR PERGO®):
• Set the slide knob to HARD FLOOR and use the same cleaning pattern as for cleaning carpets. When moving the knob to change the height, make sure the vacuum handle is in the upright position.

牢固的

leting

rof

vaccum

USING THE VACUUM ON HARD FLOORS (SUCH AS WOOD):
• Use a brush attachment to clean wood floors because the agitator in the vacuum can damage wood floors.
Using the Vacuum to Dust:
- Use dusting brush hose attachment for books, tabletops, lamps, baseboards, fringes of area rugs, drapes.
- Make sure to close the cover over the hose tube. The vacuum must be in the upright position to use the hose attachments.

Using the Vacuum to Clean Furniture:
- Use furniture nozzle, the small wide tool that does not have brushes.
- It is important to vacuum upholstered furniture weekly, especially items that the child spends time sitting or lying on.

Using the Vacuum to Clean Cracks:
- Use the crevice tool for getting between furniture cushions, behind bookcases and cabinets and at the carpet edge.

Vacuum Maintenance:
- Use the instruction book if you have questions about how your vacuum works.
- Open the vacuum and inspect the bag after every hour of vacuuming or when the CHECK BAG indicator turns “red” Change the bag when indicator is “red” or dirt reaches dotted line on bag. A bag can get half full in an hour in a dusty room.
- Review the importance of cleaning both the secondary and final filters of the vacuum.
- Demonstrate how to clean the lens of the vacuum dust sensor.
- If string or other debris gets caught in agitator, turn off the vacuum and remove the debris by gently pulling it out or cutting it out.
- Replace vacuum belts each year.
Dust control --Vacuuming and Door Mats Checklist

Key messages:

- Control dust
- control track-in
- get rid of it
- Why?
  - Breathe into lungs
  - Can contain dust mites, dander, mold allergens, lead, pesticide residue

Recommended Client Actions:

- Doormat: what kind, where, how to clean
- Remove shoes
- Vacuum and dust
  - two times/week in child's bedroom and play area
  - one time/week in other rooms
- Child out while vacuuming and dusting
- Warranty card--fill in and mail
- Vacuum maintenance

CAS/CHW Actions:

- Assess prior education and knowledge
- 3 spot test. Record results.
- Halogen light dust demonstration
- Explain about vacuums
  - low emission
  - vacuum away from rug fringe, coins, etc.
  - never vacuum water
  - unplug at wall
  - rewind cord
- Explain how to vacuum--see box →
- Demonstrate how to vacuum
- Ask client to try vacuum and attachments
- Explain how to dust
- Dust mask protocol if appropriate
- Vacuum maintenance
  - instruction book
  - inspect bag
  - sensor plate
  - check belts
  - how to remove debris agitator

Future Visits

- assess frequency of vacuuming and client questions
- using dust sensor light
- perform 3 spot test
- maintenance and instruction book
- check bag
- clean sensor plate
- belt
- how to clean agitator
- observe client vacuuming
- change belt at one year exit

Supplies:

- vacuum
- door mat
- extra vacuum belt
- vacuum bags

Educational Handouts

- vacuuming technique
- repair flyer

How to vacuum

- use switch
- dirt finder on Hi
- check bag
- pickup large debris before
- vacuum 3 X 3 foot square
- area rugs
- bare floors
- dust mops
- dusting brush hose attachment
- cleaning furniture
- crevice tool
