# Foreword, Crime in the United States, 2004

In its 75<sup>th</sup> year, the Uniform Crime Reporting (UCR) Program serves as a long-standing example of how the country can benefit when information flows freely among local, state, and federal law enforcement agencies. The cooperative efforts of these agencies to report their jurisdictions' crime statistics enable the FBI to present a nationwide view of crime.

Though Congress passed an act in 1870 calling for the attorney general to gather crime statistics for the United States, the framework for collecting these statistics was missing until the formation of the International Association of Chiefs of Police (IACP) in 1893. The foreword of an IACP manual for police records, published in 1929, states, "We are compelled to recognize that crime statistics must originate with the police and that without police support, there can be no crime statistics." The FBI, tapped to coordinate the UCR Program in 1930, worked to foster this fundamental principle, helping the Program to grow in participation and refine its methods for data collection, analysis, and publication.

Crime in the United States, 2004, a manifestation of this collaboration, offers an array of offense, arrest, and police employment data with national totals broken down by region, state, and agency. Narrative and tabular portions highlight national and regional trends identified in the reported figures for the year. Yet, the statistics included in this publication represent only a small percentage of the voluminous amount of information the Program captures and makes available to law enforcement and the public.

This vast compilation of data serves a large and varied audience. In addition to law enforcement, the Program's data users include other members of the criminal justice community, governmental agencies, legislators, researchers, students, the media, corporate managers, and private citizens. The Program's data are essential for those seeking to understand the nature and extent of crime in the Nation, their region, their state, or their community.

Local and state law enforcement agencies and the UCR Program staff collaborate daily to gather and provide reliable crime statistics. The resulting valuable data resource is used in a multitude of real-world applications. In a Nation where information sharing has become a priority as law enforcement works together to investigate crimes and prevent terrorist acts, the UCR Program remains an open book for all who wish to better understand crime in the United States.

Robert S. Mueller, III

Kohn & Tufullar

Director

Data users are cautioned against comparing crime trends presented in this report and those estimated by the National Crime Victimization Survey (NCVS), administered by the Bureau of Justice Statistics. Because of differences in methodology and crime coverage, the two programs examine the Nation's crime problem from somewhat different perspectives, and their results are not strictly comparable. The definitional and procedural differences can account for many of the apparent discrepancies in results from the two programs.

The national Uniform Crime Reporting (UCR) Program would like to hear from you.

The staff at the national UCR Program are continually striving to improve the publications. We would appreciate it if the primary user of this publication would complete the evaluation form at the end of this book and either mail it to us at the indicated address or fax it: (304) 625-5394.

## **Crime Factors**

Until data users examine all the variables that affect crime in a town, city, county, state, region, or college or university, they can make no meaningful comparisons.

### **Caution against ranking**

Each year when Crime in the United States is published, many entities—news media, tourism agencies, and other groups with an interest in crime in our Nation—use reported figures to compile rankings of cities and counties. These rankings, however, are merely a quick choice made by the data user; they provide no insight into the many variables that mold the crime in a particular town, city, county, state, or region. Consequently, these rankings lead to simplistic and/or incomplete analyses that often create misleading perceptions adversely affecting cities and counties, along with their residents.

# Consider other characteristics of a jurisdiction

To assess criminality and law enforcement's response from jurisdiction to jurisdiction, one must consider many variables, some of which, while having significant impact on crime, are not readily measurable or applicable pervasively among all locales. Geographic and demographic factors specific to each jurisdiction must be considered and applied if one is going to make an accurate and complete assessment of crime in that jurisdiction. Several sources of information are available that may assist the responsible researcher in exploring the many variables that affect crime in a particular locale. The U.S. Census Bureau data, for example, can be used to better understand the makeup of a locale's population. The transience

of the population, its racial and ethnic makeup, its composition by age and gender, educational levels, and prevalent family structures are all key factors in assessing and comprehending the crime issue.

Local chambers of commerce, planning offices, or similar entities provide information regarding the economic and cultural makeup of cities and counties. Understanding a jurisdiction's industrial/economic base; its dependence upon neighboring jurisdictions; its transportation system; its economic dependence on nonresidents (such as tourists and convention attendees); its proximity to military installations, correctional facilities, etc., all contribute to accurately gauging and interpreting the crime known to and reported by law enforcement.

The strength (personnel and other resources) and the aggressiveness of a jurisdiction's law enforcement agency are also key factors in understanding the nature and extent of crime occurring in that area. Although information pertaining to the number of sworn and civilian law enforcement employees can be found in this publication, it cannot be used alone as an assessment of the emphasis that a community places on enforcing the law. For example, one city may report more crime than a comparable one, not because there is more crime, but rather because its law enforcement agency through proactive efforts identifies more offenses. Attitudes of the citizens toward crime and their crime reporting practices, especially concerning minor offenses, also have an impact of the volume of crimes known to police.

### Make valid assessments of crime

It is incumbent upon all data users to become as well educated as possible about how to understand and quantify the nature and extent of crime in the United States and in any of the more than 17,000 jurisdictions represented by law enforcement contributors to the Uniform Crime Reporting (UCR) Program. Valid assessments are possible only with careful study and analysis of the various unique conditions affecting each local law enforcement jurisdiction.

Historically, the causes and origins of crime have been the subjects of investigation by many disciplines. Some factors that are known to affect the volume and type of crime occurring from place to place are:

- Population density and degree of urbanization.
- Variations in composition of the population, particularly youth concentration.
- Stability of population with respect to residents' mobility, commuting patterns, and transient factors.
- Modes of transportation and highway system.
- Economic conditions, including median income, poverty level, and job availability.

- Cultural factors and educational, recreational, and religious characteristics.
- Family conditions with respect to divorce and family cohesiveness.
- · Climate.
- Effective strength of law enforcement agencies.
- Administrative and investigative emphases of law enforcement.
- Policies of other components of the criminal justice system (i.e., prosecutorial, judicial, correctional, and probational).
- · Citizens' attitudes toward crime.
- Crime reporting practices of the citizenry.

Crime in the United States provides a nationwide view of crime based on statistics contributed by local, state, tribal, and federal law enforcement agencies. Population size is the only correlate of crime presented in this publication. Although many of the listed factors equally affect the crime of a particular area, the UCR Program makes no attempt to relate them to the data presented. The reader is, therefore, cautioned against comparing statistical data of individual reporting units from cities, counties, metropolitan areas, states, or colleges and universities solely on the basis of their population coverage or student enrollment. Until data users examine all the variables that affect crime in a town, city, county, state, region, or college or university, they can make no meaningful comparisons.

# Summary of the Uniform Crime Reporting (UCR) Program

The Program's primary objective is to generate reliable information for use in law enforcement administration, operation, and management; however, its data have over the years become one of the country's leading social indicators.

The Uniform Crime Reporting (UCR) Program is a nationwide, cooperative statistical effort of more than 17,000 city, university and college, county, state, tribal, and federal law enforcement agencies voluntarily reporting data on crimes brought to their attention. During 2004, law enforcement agencies active in the UCR Program represented 94.2 percent of the total population. The coverage amounted to 95.4 percent of the United States population in Metropolitan Statistical Areas (MSAs), 86.9 percent of the population in cities outside metropolitan areas, and 89.2 percent in nonmetropolitan counties.

Since 1930, the FBI has administered the UCR Program and continued to assess and monitor the nature and type of crime in the Nation. The Program's primary objective is to generate reliable information for use in law enforcement administration, operation, and management; however, its data have over the years become one of the country's leading social indicators. The American public looks to the Uniform Crime Reports for information on fluctuations in the level of crime, and criminologists, sociologists, legislators, municipal planners, the media, and other students of criminal justice use the statistics for varied research and planning purposes.

### **Historical background**

Recognizing a need for national crime statistics, the International Association of Chiefs of Police (IACP) formed the

Committee on Uniform Crime Records in the 1920s to develop a system of uniform crime statistics. Establishing offenses known to law enforcement as the appropriate measure, the Committee evaluated various crimes on the basis of their seriousness, frequency of occurrence, pervasiveness in all geographic areas of the country, and likelihood of being reported to law enforcement. After studying state criminal codes and making an evaluation of the recordkeeping practices in use, the Committee completed a plan for crime reporting that became the foundation of the UCR Program in 1929.

Seven main offense classifications, known as Part I crimes, were chosen to gauge the state of crime in the Nation. These seven offense classifications included the violent crimes of murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, and the property crimes of burglary, larceny-theft, and motor vehicle theft. By congressional mandate, arson was added as the eighth Part I offense category in 1979. Agencies classify and score these offenses according to a Hierarchy Rule, with the exception of justifiable homicides, motor vehicle theft, and arson, and report their data to the FBI. More information regarding the Hierarchy Rule is presented in Appendix I.

During the early planning of the Program, it was recognized that the differences among criminal codes precluded a mere aggregation of state statistics to arrive at a national total. Further, because of the variances in punishment for the same offenses in different state codes, no distinction between felony and misdemeanor crimes was possible. To avoid these problems and provide nationwide uniformity in crime reporting, standardized offense definitions by which law enforcement agencies were to submit data without regard for local statutes were formulated. The definitions used by the Program are set forth in Appendix II of this publication.

In January 1930, 400 cities representing 20 million inhabitants in 43 states began participating in the UCR Program. Congress enacted Title 28, Section 534, of the United States Code authorizing the Attorney General to gather crime information that same year. The Attorney General, in turn, designated the FBI to serve as the national clearinghouse for the crime data collected. Since that time, data based on uniform classifications and procedures for reporting have been obtained from the Nation's law enforcement agencies every year.

### **Advisory Groups**

Providing vital links between local law enforcement and the FBI in the conduct of the UCR Program are the Criminal Justice Information Systems Committees of the IACP and the National Sheriffs' Association (NSA). The IACP, as it has since the Program began, represents the thousands of police departments nationwide. The NSA encourages sheriffs

throughout the country to participate fully in the Program. Both committees serve in advisory capacities concerning the UCR Program's operation.

In 1988, a Data Providers' Advisory Policy Board was established. That Board operated until 1993 when it combined with the National Crime Information Center Advisory Policy Board to form a single Advisory Policy Board (APB) to address all FBI criminal justice information services. The current APB ensures continuing emphasis on UCRrelated issues. The Association of State Uniform Crime Reporting Programs (ASUCRP) focuses on UCR issues within individual state law enforcement associations and also promotes interest in the UCR Program. These organizations foster widespread and responsible use of uniform crime statistics and lend assistance to data contributors when needed.

### **Redesign of UCR**

Although UCR data collection had originally been conceived as a tool for law enforcement administration, by the 1980s, the data were widely used by other entities involved in various forms of social planning. Recognizing the need for more detailed crime statistics, law enforcement called for a thorough evaluative study that would modernize the UCR Program. The FBI fully concurred with the need for an updated Program and lent its complete support, formulating a comprehensive threephase redesign effort. The Bureau of Justice Statistics (BJS), the Department of Justice agency responsible for funding criminal justice information projects, agreed to underwrite the first two phases. Conducted by an independent contractor, these phases were structured to determine what, if any, changes should be made to the current Program. The third phase would involve implementation of the changes identified. Abt Associates Inc. of Cambridge, Massachusetts, overseen by the FBI, BJS, and a Steering Committee comprised of highly qualified individuals representing a myriad of disciplines, commenced the first phase in 1982.

During the first phase, the historical evolution of the UCR Program was examined. All aspects of the Program, including the objectives and intended user audience, data items, reporting mechanisms, quality control issues, publications and user services, and relationships with other criminal justice data systems, were studied.

Early in 1984, a conference on the future of UCR, held in Elkridge, Maryland, launched the second phase of the study that examined the potential of UCR and concluded with a set of recommended changes. Attendees at this conference reviewed work conducted during the first phase and discussed the recommendations that should be considered during phase two.

Findings from the evaluation's first phase and input on alternatives for the future were also major topics of discussion at the seventh National UCR Conference in July 1984. A survey of law enforcement agencies overlapped phases one and two.

Phase two ended in early 1985 with the production of a draft, *Blueprint* for the Future of the Uniform Crime Reporting Program. The study's Steering Committee reviewed the draft report at a March 1985 meeting and made various recommendations for revision. The Committee members, however, endorsed the report's concepts.

In April 1985, the phase two recommendations were presented at the eighth National UCR Conference. Various considerations for the final report were set forth, and the overall concept for the revised Program was unanimously approved. The joint IACP/NSA Committee on UCR also issued a resolution endorsing the *Blueprint*.

The final report, the Blueprint for the Future of the Uniform Crime Reporting Program, was released in the summer of 1985. It specifically outlined recommendations for an expanded, improved UCR Program to meet future informational needs. There were three recommended areas of enhancement to the UCR Program. First, offenses and arrests would be reported using an incident-based system. Second, data would be collected on two levels. Agencies in level one would report important details about those offenses comprising the Part I crimes, their victims, and arrestees. Law enforcement agencies covering populations of over 100,000 and a sampling of smaller agencies that would collect expanded detail on all significant offenses would be included in level two. Third, a quality assurance program would be introduced.

To begin implementation, the FBI awarded a contract to develop new offense definitions and data elements for the redesigned system. The work involved (a) revising the definitions of certain Part I offenses (b) identifying additional significant offenses to be reported, (c) refining definitions for both, and (d) developing data elements (incident details) for all UCR offenses in order to fulfill the requirements of incident-based reporting versus the current summary system.

Concurrent with the preparation of the data elements, the FBI studied the various state systems to select an experimental site for implementing the redesigned Program. In view of its long-standing incident-based Program and well-established staff dedicated solely to UCR, the South Carolina Law Enforcement Division (SLED) was chosen. The SLED agreed to adapt its existing

system to meet the requirements of the redesigned Program and collect data on both offenses and arrests relating to the newly defined offenses.

To assist the SLED with the pilot project, offense definitions and data elements developed under the private contract were put at the staff's disposal. Also, FBI automated data processing personnel developed Automated Data Capture Specifications for use in adapting the state's data processing procedures to incorporate the revised system. The BJS supplied funding to facilitate software revisions needed by the state. The SLED completed its testing of the new Program in late 1987.

Following the completion of the pilot project conducted by the SLED, the FBI produced a draft of guidelines for an enhanced UCR Program. Law enforcement executives from around the country were then invited to a conference in Orange Beach, Alabama, where the guidelines were presented for final review.

During the conference, three overall recommendations were passed without dissent: first, that there be established a new, incident-based national crime reporting system; second, that the FBI manage this Program; and third, that an Advisory Policy Board composed of law enforcement executives be formed to assist in directing and implementing the new Program.

Information about the redesigned UCR Program, call the National Incident-Based Reporting System, or NIBRS, is contained in several documents. *Data Collection Guidelines* (August 2000) contains a system overview and descriptions of the offense codes, reports, data elements, and data values used in the system. *Error Message Manual* (December 1999) contains designations of mandatory and optional data elements, data element edits, and error

messages. Data Submission Specifications is for the use of local and state systems personnel who are responsible for preparing magnetic media for submission to the FBI. The document is only available electronically at the FBI's Internet site at <www.fbi.gov/ucr/ucr. htm>. Another publication, Handbook for Acquiring a Records Management System (RMS) that is Compatible with NIBRS is also available electronically at that Web site.

A NIBRS edition of the *UCR Handbook* was published in 1992 to assist law enforcement agency data contributors implementing the NIBRS within their departments. This document is geared toward familiarizing local and state law enforcement personnel with the definitions, policies, and procedures of the NIBRS. It does not contain the technical coding and data transmission requirements presented in the other NIBRS publications.

The NIBRS collects data on each single incident and arrest within 22 crime categories. For each offense known to police within these categories, incident, victim, property, offender, and arrestee information are gathered when available. The goal of the redesign is to modernize crime information by collecting data currently maintained law enforcement records, making the enhanced UCR Program a by-product of current records systems while maintaining the integrity of UCR's long-running statistical series.

It became apparent during the development of the prototype system that the level one and level two reporting proposed in the *Blueprint* might not be the most practical approach. Many local and state law enforcement administrators indicated that the collection of data on all pertinent offenses could be handled with more ease than could the extraction of selected ones. Although

"Limited" participation, equal to the *Blueprint*'s level one, remains an option, most reporting jurisdictions, upon implementation, go immediately to "Full" participation, meeting all the NIBRS' data submission requirements.

Implementation of the NIBRS is occurring at a pace commensurate with the resources, abilities, and limitations of the contributing law enforcement agencies. The FBI was able to accept NIBRS data as of January 1989, and to date, the following 29 state Programs have been certified for NIBRS participation: Arizona, Arkansas, Colorado, Connecticut, Delaware, Idaho, Iowa, Kansas, Kentucky, Louisiana, Maine, Massachusetts, Michigan, Missouri, Nebraska, New Hampshire, North Dakota, Ohio, Oregon, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah. Vermont, Virginia, West Virginia, and Wisconsin. Among those that submit NIBRS data, eight states (Delaware, Idaho, Iowa, South Carolina, Tennessee, Virginia, West Virginia, and Vermont) submit all their data via the NIBRS.

Ten state Programs are in various stages of testing the NIBRS. Six other state agencies, as well as agencies in the District of Columbia, are in various stages of planning and developing NIBRS.

# Suspension of the Crime Index and Modified Crime Index

In June 2004, the CJIS APB approved discontinuing the use of the Crime Index in the UCR Program and its publications and directed the FBI publish a violent crime total and a property crime total until a more viable index is developed. The Crime Index was first published in *Crime in the United States* in 1960. Congress designated arson as a Part I offense in October 1978, and the UCR Program began collecting arson data in 1979. The FBI adopted the term Modified Crime Index to reflect the addition

of arson as a Part I offense. The Modified Crime Index was the number of Crime Index offenses plus arson. However, in recent years, the Crime Index (and subsequently the Modified Crime Index) has not been a true indicator of the degree of criminality. The Crime Index was simply the title used for an aggregation of the seven main offense classifications (Part I offenses) for which data has been collected since the Program's implementation. The Crime Index and Modified Crime Index were driven upward by the offense with the highest number, in this case, larceny-theft, creating a bias against a jurisdiction with a high number of larceny-thefts but a low number of other serious crimes such as murder and forcible

rape. Currently, larceny-theft makes up 59.4 percent of reported crime, and thus the sheer volume of those offenses overshadow more serious but less frequently committed offenses. The CJIS Division studied the appropriateness and usefulness of the Crime Index and Modified Crime Index for several years and brought the matter before many advisory groups including the UCR Subcommittee of the CJIS APB, the ASUCRP, and a meeting of leading criminologists and sociologists hosted by the BJS. The consensus was that the Crime Index and Modified Crime Index no longer served their original purpose, that the UCR Program should suspend their use, and that a more robust index should be developed.

# GRIME 2014

# **One Property Crime**

One Burglary

One Larceny-theft

One Motor Vehicle Theft

The Crime Clock should be viewed with care. The most aggregate representation of UCR data, it conveys the annual reported crime experience by showing a relative frequency of occurrence of Part I offenses. It should not be taken to imply a regularity in the commission of crime. The Crime Clock represents the annual ratio of crime to fixed time intervals.

# **SECTION II Offenses Reported**

### Violent Crime content revised 02/17/06

### **Definition**

Violent crime is composed of four offenses: murder and nonnegligent manslaughter, forcible rape, robbery, and aggravated assault. According to the Uniform Crime Reporting (UCR) Program's definition, violent crimes involve force or threat of force.

### **Trend**

	Year	Number of offenses	Rate per 100,000 inhabitants
	2003	1,383,676	475.8
	2004	1,367,009	465.5
Ì	Percent change	-1.2	-2.2

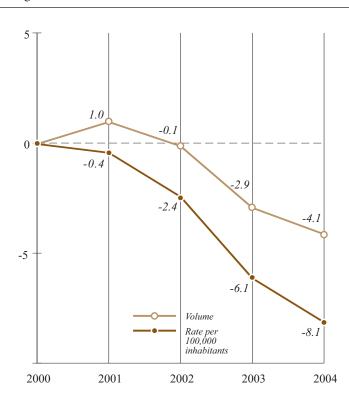

### **National Volume, Trends, and Rates**

In 2004, there were an estimated 1,367,009 violent crimes nationwide. Of these, aggravated assaults comprised 62.5 percent; robbery, 29.4 percent; forcible rape, 6.9 percent; and murder, 1.2 percent. (Based on Table 1.)

The UCR Program examines data in increments of 2, 5, and 10 years to formulate trend information. From 2003 to 2004, the estimated volume of violent crime in the United States fell by 1.2 percent. The 5- and 10-year trend data showed that the estimated number of violent crimes decreased 4.1 percent compared with the 2000 figure and 24.0 percent compared with 1995 data. The occurrence of violent crime throughout the Nation in 2004 was estimated at a rate of 465.5 violent offenses per 100,000 inhabitants, continuing a 13-year decline. (See Tables 1 and 1A.)

### Figure 2.2

# **Violent Crime**Percent Change from 2000

A look at the volume of individual offenses within the violent crime category showed that in a year-to-year comparison of 2003 and 2004 data, the estimated number of robberies decreased 3.1 percent, of murders 2.4 percent, and of aggravated assaults 0.5 percent. The only violent crime to show any increase from 2003 to 2004 was forcible rape at 0.8 percent. (See Tables 1 and 1A.)

In terms of the rate of offenses for each of the four violent crimes, aggravated assault had the highest rate, estimated at 291.1 offenses per 100,000 inhabitants. There were an estimated 136.7 robberies, 32.2 forcible rapes, and 5.5 murders for each 100,000 resident population in 2004. (See Table 1.)

### Regional Offense Trends and Rates

As explained in Appendix III, the UCR Program groups the states into four regions: the Northeast, the Midwest, the South, and the West. The population distribution of the regions is provided in Table 3, and the estimated volume and rate of violent crime by region are presented in Table 4. An examination of violent crime by region showed that:

### The Northeast

The Northeast accounted for an estimated 18.6 percent of the Nation's population and an estimated 15.6 percent of violent crime in 2004. Of the four regions, the Northeast had the

largest decrease, 2.5 percent, in the volume of violent crime. In addition, each of the offense types comprising the violent crime category had decreases in the volume of violent crime when compared with 2003 data. The number of robbery offenses fell 3.3 percent; forcible rape, 2.7 percent; aggravated assault, 2.0 percent; and murder, 1.9 percent.

In this region, there were an estimated 390.7 violent crimes for each 100,000 resident population, a 2.8-percent decline from the 2003 rate. By offense, the rates were estimated at 220.6 aggravated assaults, 143.6 robberies, 22.4 forcible rapes, and 4.2 murders per 100,000 inhabitants.

### The Midwest

With an estimated 22.4 percent of the Nation's population residing in the Midwest, the region accounted for an estimated 18.8 percent of violent crime. This region had a 1.7-percent decline in violent crime in 2004 compared with 2003 data. The number of murders in that region fell 3.4 percent, aggravated assaults declined 2.1 percent, and robberies decreased 1.6 percent. The offense of forcible rape was the only violent crime that showed an increase in volume (1.1 percent), compared with 2003 data.

Table 2.1

**Violent Crime**Percent Distribution by Month, 2000-2004

Month	2000	2001	2002	2003	2004
January	7.9	7.7	7.9	7.8	7.8
February	7.2	6.7	6.8	6.4	7.0
March	8.1	7.9	7.9	8.2	8.3
April	8.1	8.1	8.1	8.3	8.2
May	8.9	8.7	8.7	8.9	9.0
June	8.6	8.7	8.8	8.8	8.6
July	9.3	9.3	9.3	9.2	9.2
August	9.1	8.9	9.3	9.2	9.0
September	8.6	8.7	9.2	8.6	8.5
October	8.7	9.0	8.6	8.8	8.6
November	7.8	8.2	7.7	7.9	7.8
December	7.7	8.1	7.7	7.8	7.9

The rate of violent crime in the Midwest was estimated at 391.1 offenses per 100,000 resident population, a 2.1-percent decrease from the 2003 rate.

There were 233.2 aggravated assaults, 116.8 robberies, and 4.7 murders per 100,000 inhabitants. Forcible rape, with a rate of 36.4 offenses per 100,000 inhabitants, was the only violent crime with an increase (0.7 percent) in the rate from the 2003 figure.

### The South

The South, the Nation's most populated region, had an estimated 36.1 percent of the Nation's inhabitants. An estimated 41.9 percent of the Nation's violent crimes occurred in this region. Overall, violent crime decreased slightly (0.3 percent) in the region when compared with 2003 figures. The number of robberies and murders decreased, 4.1 percent and 3.7 percent, respectively. However, from 2003 to 2004, the estimated volume of forcible rapes and aggravated assaults in that region increased 2.6 percent and 1.2 percent, respectively.

The estimated rate of violent crime in the South was 540.6 offenses per 100,000 in population, a decline of 1.6 percent compared with the 2003 rate. By offense, this region experienced 354.3 aggravated assaults (a 0.2-percent decline), 145.6 robberies (a 5.4-percent decrease), and 6.6 murders (a 5.0-percent decline) per 100,000 in population. Forcible rape was the lone violent crime to increase (1.2 percent) in the rate, 34.1 per 100,000 inhabitants.

### The West

With an estimated 23.0 percent of the Nation's population, the West had an estimated 23.7 percent of violent crime. Overall in this region, violent crime declined 1.6 percent. Three of the four violent offenses decreased in the volume of violent crime compared with 2003 data—robbery decreased 2.5 percent,

aggravated assaults declined 1.4 percent, and forcible rape declined 0.4 percent. A comparison of the 2004 data with 2003 figures showed that murder was the only offense in the West to show an increase, 0.8 percent.

Overall in this region, the estimated rate of violent crime was 480.7 offenses per 100,000 inhabitants, a 3.0-percent decline from the 2003 rate. By offense, the murder rate, 5.7 per 100,000 in population, showed virtually no change from the 2003 data. The rate for aggravated assault was 305.4 per 100,000 inhabitants, a 2.8-percent decrease. The rate of robbery, 136.5, declined 3.9 percent, and the rate of forcible rape, 33.2, decreased 1.8 percent.

### **Community Types**

The UCR Program aggregates crime data into three community types: Metropolitan Statistical Areas (MSAs), cities outside metropolitan statistical areas, and nonmetropolitan counties. Appendix III provides additional information regarding community types. Nearly 83 percent (82.9) of the Nation's population lived in MSAs in 2004. Residents of cities outside MSAs accounted for 6.8 percent of the country's population, and 10.4 percent of the Nation's population lived in nonmetropolitan counties. (Based on Table 2.)

A look at the volume of violent crime by community type showed that an estimated 90.0 percent of violent crime occurred in the Nation's MSAs, 5.5 percent of violent crime occurred in cities outside MSAs, and 4.5 percent of violent crime occurred in the Nation's nonmetropolitan counties. (Based on Table 2.) By community type, the violent crime rates were estimated at 505.8 violent offenses per 100,000 inhabitants within MSAs, 377.0 violent offenses per 100,000 inhabitants in cities outside

MSAs, and 201.5 violent offenses per 100,000 inhabitants in nonmetropolitan counties. (See Table 2.)

# Population Groups: Trends and Rates

In the UCR Program, data are also aggregated into population groups, a description of which is provided in Appendix III. The Nation's cities collectively had a 1.9-percent decrease in the number of violent offenses in 2004 compared with 2003 data. By city population group, cities with populations of 25,000 to 49,999 inhabitants had the lone increase (1.0 percent) in the volume of violent crime. Violent crime decreased by 1.6 percent in the Nation's metropolitan counties but increased slightly (0.3 percent) in the Nation's nonmetropolitan counties. (See Table 12.)

The law enforcement agencies in the Nation's cities, collectively, reported 577.0 violent offenses per 100,000 in population in 2004. By population group with the city label, law enforcement agencies in the Nation's largest cities, those with 250,000 and over inhabitants, reported the highest rate, 932.6 violent crimes for each 100,000 inhabitants in 2004, and agencies in cities with 10,000 to 24,999 inhabitants reported the lowest rate, 303.7. Law enforcement agencies in the Nation's metropolitan counties reported a rate of 331.1 violent crimes per 100,000 resident population; those in nonmetropolitan counties reported a rate of 215.6 violent crimes per 100,000 resident population. (See Table 16.)

### **Weapons Distribution**

The UCR Program collects weapon data for murder, robbery, and aggravated assault offenses. An examination of these data indicated that most violent crime (30.7 percent) involved the use of

personal weapons, such as hands, fists, feet, etc. Firearms were used in 26.4 percent and knives or cutting instruments were used in 15.5 percent of violent crime. Other dangerous weapons were used in 27.3 percent of violent offenses. (Based on Tables 2.9 and 19.)

### **Clearances**

In the UCR Program, an offense may be cleared by an arrest when at least one person is arrested, charged with the commission of the offense, and remanded to the court for prosecution. An agency may also clear an offense by exceptional means when some force outside the agency's control prevents the arrest of the individual. More in-depth information regarding clearances is provided in Section III.

In 2004, 46.3 percent of violent crime in the Nation was cleared by arrest or exceptional means. Typical of the violent offenses, murder had the highest percentage of offenses cleared. In 2004, law enforcement agencies cleared 62.6 percent of murders, 55.6 percent of aggravated assaults, 41.8 percent of forcible rapes, and 26.2 percent of robberies. (See Table 25.)

A comparison of clearance data by region showed that law enforcement agencies in the Northeast cleared 50.3 percent of the violent crime reported to them; the West, 47.1 percent; the South, 46.2 percent; and the Midwest, 41.8 percent. (See Table 26.)

Collectively, in the Nation's cities, law enforcement agencies cleared 43.7 percent of violent crime. Of the population groups with the city designation, the Nation's smallest cities, those with 10,000 and less in resident population, had the highest percentage of violent offenses cleared, 57.7 percent. Cities with 250,000 and over inhabitants had the lowest percentage of violent offenses cleared, 38.5 percent. Law enforcement

agencies in the Nation's metropolitan counties cleared 54.5 percent of violent crime; agencies in the Nation's nonmetropolitan counties cleared 60.6 percent of violent crime. (See Table 25.)

### Clearances and Juveniles

When an individual under the age of 18 (a juvenile) is cited to appear before juvenile authorities, the incident is cleared by arrest despite the lack of a physical arrest. In addition, the UCR Program considers any clearance that involves both adults (those aged 18 or older) and juveniles as an adult clearance. Therefore, the juvenile clearance data are limited to those clearances involving juveniles only.

In 2004, 12.1 percent of violent crime clearances nationwide involved only juveniles. In the Nation's cities collectively, 12.3 percent of violent crime clearances involved only juveniles. Of the Nation's city population groups, cities with 25,000 to 49,999 inhabitants had the highest percentage of clearances for violent crime solely involving juveniles, 14.2 percent; cities with 250,000 and over inhabitants had the lowest percentage, 10.5 percent. Law enforcement agencies in metropolitan counties reported that 12.3 percent of their clearances for violent crime involved only juveniles, and those in the Nation's nonmetropolitan counties, 9.3 percent of clearances. (See Table 28.)

# Murder content revised 02/17/06

### **Definition**

The Uniform Crime Reporting (UCR) Program defines murder and nonnegligent manslaughter as the willful (nonnegligent) killing of one human being by another.

The classification of this offense is based solely on police investigation as opposed to the determination of a court, medical examiner, coroner, jury, or other judicial body. The UCR Program does not include the following situations in this offense classification: deaths caused by negligence, suicide, or accident; justifiable homicides; and

attempts to murder or assaults to murder, which are scored as aggravated assaults.

### **Trend**

Ye	ar	Number of offenses	Rate per 100,000 inhabitants
20	03	16,528	5.7
20	04	16,137	5.5
Percent	change	-2.4	-3.3

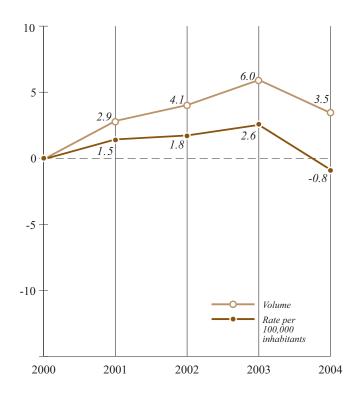

### National Volume, Trends, and Rates

The UCR Program's homicide data for 2004 showed that for the first time in 4 years, the estimated number of murders in the United States decreased. An estimated 16,137 persons were murdered nationwide, a decline of 2.4 percent from the 2003 figure. An analysis of 5- and 10-year trend data showed that the 2004 estimate increased 3.5 percent from the 2000 estimate, but decreased 25.3 percent from the

### Figure 2.3

### Murder

Percent Change from 2000

estimated number of murders a decade ago (1995).

Nationwide, the 2004 data yielded an estimated rate of 5.5 murders per 100,000 inhabitants, a 3.3-percent decline from the 2003 rate and a 0.8-percent decrease compared with the 2000 rate. In addition, the 2004 rate was 33.2 percent lower than the national murder rate for 1995. (Based on Tables 1 and 1A.)

# Regional Offense Trends and Rates

The UCR Program divides the United States into four regions: the Northeast, the Midwest, the South, and the West. (More details concerning geographic regions are provided in Appendix III.) A regional overview of the 2004 murder data follows.

### The Northeast

In 2004, the Northeast accounted for 18.6 percent of the Nation's population and 14.1 percent of the estimated number of murders. With an estimated 2,269 murders, the Northeast registered a 1.9-percent decline when compared with the 2003 estimate. The offense rate for this region was estimated at 4.2 murders per 100,000 residents, a 2.1-percent decline

compared with the 2003 rate. (See Tables 3 and 4.)

### The Midwest

The Midwest accounted for 22.4 percent of the United States' total population and 19.3 percent of the estimated number of murders that occurred in 2004. There were an estimated 3,109 murders in this region, a figure 3.4 percent lower than the 2003 estimate. The Midwest experienced a murder rate of 4.7 offenses per 100,000 inhabitants, a 3.9-percent decrease from the 2003 rate. (See Tables 3 and 4.)

### The South

The Nation's most populous region, the South, accounted for 36.1 percent of the total population in 2004. Forty-three (43.0) percent of the estimated number

### Table 2.2

### Table 2.3

### Murder Victims

by Race and Sex, 2004

			Sex	
Race	Total	Male	Female	Unknown
White	6,929	5,031	1,896	2
Black	6,632	5,562	1,067	3
Other race	365	269	95	1
Unknown race	195	128	41	26
Total	14,121	10,990	3,099	32

of murders were reported in this region. The estimated 6,942 murders reflected a 3.7-percent decline when compared with the previous year's figure. The region posted an estimated rate of 6.6 murders per 100,000 in population, a 5.0-percent decline from the 2003 rate. (See Tables 3 and 4.)

### The West

Twenty-three percent of the Nation's inhabitants lived in the West in 2004, and 23.7 percent of the estimated number of murders were reported in this region. The West was the only region of the country in which the number increased (0.8 percent) from 2003 to 2004 for an estimated 3,817 murders. This region experienced a murder rate (5.7 offenses per 100,000 inhabitants) that remained virtually unchanged from the 2003 rate. (See Tables 3 and 4.)

### **Community Types**

The UCR Program aggregates crime data for three community types: Metropolitan Statistical Areas (MSAs), cities outside MSAs, and nonmetropolitan counties outside MSAs. In 2004, MSAs accounted for 82.9 percent of the Nation's population and 88.8 percent of the total estimated number of murders that occurred in the United States. With 14,334 homicides, MSAs experienced a rate of 5.9 murders per 100,000 residents. Cities outside MSAs accounted for 6.8 percent of the U.S. population and, with an estimated 704 murders, accounted for 4.4 percent of the murders in the Nation. The murder rate for these cities was 3.5 offenses per 100,000 in population. (Based on Table 2.)

In 2004, a little over 10 percent (10.4) of the Nation's population was comprised of nonmetropolitan counties. These counties had 1.099 murders.

which accounted for 6.8 percent of the total and a rate of 3.6 murders per 100,000 inhabitants. (Based on Table 2.)

# Population Groups: Trends and Rates

The UCR Program uses the following population group designations in its data presentations: cities (grouped according to population size) and counties (classified as either metropolitan or nonmetropolitan). A breakdown of these classifications is furnished in Appendix III.

A review of the data for the twoyear period 2003 to 2004 revealed that the Nation's cities experienced a 5.1-percent decrease in the number of murders. Cities with populations under 10,000 residents had the greatest proportional decrease (-12.0 percent) in the number of murders. However, cities with 25,000 to 49,999 inhabitants were the only city group that experienced an increase (2.1 percent) in the number of homicides. A review of the county population groups showed that metropolitan counties also experienced an increase (1.9 percent) in the number when compared with the 2003 figure; however, nonmetropolitan counties had a 1.3-percent decrease. (See Table 12.)

An examination of the 2004 data showed that cities collectively had a rate of 6.6 murders per 100,000 residents. The largest cities (those with 250,000 and over in population) experienced the highest rate among the city population groups (12.5 murders per 100,000 inhabitants). The smallest cities (those under 10,000 in population) had the lowest murder rate (2.4 offenses per 100,000 inhabitants). The homicide rates for metropolitan and nonmetropolitan counties were 3.9 and 3.7 per 100,000 residents, respectively. (See Table 16.)

### Offense Analysis

### Supplementary Homicide Reports

The UCR Program's Supplementary Homicide Reports provide information regarding the age, sex, and race of both the murder victim and the offender; the type of weapon used in the offense; the relationship of the victim to the offender; and the circumstance surrounding the incident. Of the estimated 16,137 murders that occurred in the United States in 2004, law enforcement agencies contributing data to the UCR Program submitted Supplementary Homicide Reports for 14,121 of the murders. An overview of the information gleaned from these supplemental reports follows.

### Table 2.6

### Murder Victim/Offender Relationship by Age, 2004 [Single victim/single offender]

		A	age of offende	r
Age of victim	Total	Under 18	18 and over	Unknown
Total	7,039	355	6,042	642
Under 18	720	107	583	30
18 and over	6,216	245	5,372	599
Unknown	103	3	87	13

NOTE: This table is based upon incidents where some information about the offender is known by law enforcement. It excludes incidents reported with a value of "unknown offender."

### **Victims**

Based on 2004 supplemental homicide data (where the age, sex, or race of the murder victims were *known*), 90.2 percent of murder victims were adults and 9.8 percent of the victims were juveniles. Of the total number of homicide victims, 78.0 percent were male and 22.0 percent were female. Where the races of the victims were known, 49.8 percent of the victims were white, 47.6 percent were black, and 2.6 percent were American Indian/Alaskan Native or Asian/Pacific Islander. (Based on Table 2.4.)

### Offenders

The data for 2004 concerning the murders for which the offenders were known showed that 91.7 percent of the offenders were adults and 8.3 percent were juveniles. A breakdown of the data by gender showed that 90.1 percent of the offenders were male and 9.9 percent were female. In homicides where the race of the offender was known, 50.0 percent were black, 47.6 percent were white, and 2.4 percent were other races. (Based on Table 2.5.) Data from single victim/single offender incidents showed that 92.2 percent of black victims were murdered by black offenders, and 84.8

percent of white victims were murdered by white offenders. (Based on Table 2.7.)

### Weapons

Of those incidents in which the murder weapon was specified, 70.3 percent of the homicides that occurred in 2004 were committed with firearms. Of those, 77.9 percent involved handguns, 5.4 percent involved shotguns, and 4.2 percent involved rifles. Approximately 12.4 of the murders were committed with other types or unspecified types of firearms. Knives or cutting instruments were used in 14.1 percent of the murders; personal weapons, such as hands, fists, and feet, were used in 7.0 percent of murders, and blunt objects (i.e., clubs, hammers, etc.) were used in 5.0 percent of the homicides. Other weapons, such as poison, explosives, narcotics, etc., were used in 3.6 percent of the murders. (Based on Table 2.9.)

### Victim/Offender Relationships

Of the homicides for which law enforcement provided supplemental data to the UCR Program, the victim-offender relationship was unknown for 44.1 percent of the victims. For the incidents in which the relationships were known, 76.8 percent of the victims knew their killers and 23.2 percent were slain by

strangers. Among the incidents in which the victims knew their killers, 29.8 percent were murdered by family members and 70.2 percent were killed by acquaintances. (Based on Table 2.11.) The 2004 data also revealed that 33.0 percent of female victims were killed by their husbands or boyfriends, and 2.7 percent of the male victims were slain by their wives or girlfriends. (Based on Tables 2.4 and 2.11.)

### **Circumstances**

The supplemental homicide data showed that the circumstances were unknown for 35.0 percent of the murders that occurred in 2004. For the murders for which the circumstances were known, 22.8 percent of the murders involved another felony, such as forcible rape, robbery, or burglary. Investigators suspected that another 1.3 percent of homicides likely resulted during another felonious activity. Law enforcement cited that arguments, including those over money or property, were the cause for 44.4 percent of the murders. Other circumstances, such as brawls and juvenile gang killings, were noted in 12.8 percent of the murders. Specific circumstances were not provided for 18.8 percent of the incidents. (Based on Table 2.13.)

### Clearances

Law enforcement agencies reporting crime to the UCR Program can clear, or "close," the offense in one of two ways: by arrest or, when elements beyond the control of law enforcement prevent the agency from arresting and formally charging the offender, by exceptional means. (Additional information regarding clearances is provided in Section III, Offenses Cleared.) Of all the crime categories, murder typically has the highest percentage of clearances. This trend continued in 2004 as law enforcement

<sup>&</sup>lt;sup>1</sup>The killing of a felon, during the commission of a felony, by a private citizen.

cleared 62.6 percent of the murders that occurred in the Nation. (See Table 25.)

In the Nation's regions, law enforcement in the Northeast cleared 66.0 percent of their murders; agencies in the South and West cleared 65.7 percent and 58.3 percent, respectively; and law enforcement in the Midwest cleared 58.1 percent of their murder offenses. (See Table 26.)

Clearance data for the Nation's cities, metropolitan counties, and non-metropolitan counties revealed that law enforcement agencies in these population groups cleared 61.2 percent, 64.4 percent, and 74.2 percent, respectively, of their murder offenses in 2004. Of the city population groups, law enforcement in cities with populations of 10,000 to 24,999 cleared the highest percentage of their homicides (74.4 percent), and law enforcement in the largest cities (those with 250,000 or more inhabitants) cleared the lowest proportion (58.0 percent). (See Table 25.)

### Clearances and Juveniles

Special conditions exist concerning clearances and juveniles. Data users should know that when an offender under the age of 18 is cited to appear in juvenile court or before other juvenile authorities, the UCR Program consid-

ers the incident for which the juvenile is being held responsible to be cleared by arrest, although a physical arrest may not have occurred. In addition, clearances that include both adult and juvenile offenders are classified as clearances for crimes committed by adults. Additional details concerning clearances as they relate to juveniles are provided in Section III, Offenses Cleared.

The percentage of clearances reflecting juveniles' involvement in crime is typically proportionately lower for murder than for any other offense. This trend continued in 2004 as individuals under age 18 accounted for nearly 5 percent (4.7) of the murder clearances nationwide.

In the Nation's cities collectively, 4.8 percent of murder clearances involved only juveniles. Among the city population groups, the Nation's largest cities (those with 250,000 or more residents) reported the highest percentage (5.7 percent) of clearances that involved solely juveniles. The lowest percentage of such clearances (1.8 percent) occurred in cities with populations of 10,000 to 24,999. In the two county groups, 5.8 percent of the murder clearances that involved solely juveniles were reported in the metropolitan counties and 2.3 percent of the

clearances were reported in the nonmetropolitan counties. (See Table 28.)

<sup>&</sup>lt;sup>1</sup>The killing of a felon by a law enforcement officer in the line of duty.

### **Justifiable Homicide**

Certain willful killings must be reported as justifiable, or excusable. In the UCR Program, justifiable homicide is defined as and limited to:

- The killing of a felon by a peace officer in the line of duty.
- The killing of a felon, during the commission of a felony, by a private citizen.

Because these killings are determined through law enforcement investigation to be justifiable, they are tabulated separately from the murder and nonnegligent manslaughter classification.

During 2004, law enforcement agencies provided supplemental data for 666 justifiable homicides. A breakdown of those figures revealed that law enforcement officers justifiably killed 437 felons and private citizens justifiably killed 229 felons. Tables 2.15 and 2.16 provide additional information about justifiable homicides.

## Forcible Rape content revised 02/17/06

### **Definition**

Forcible rape, as defined in the Uniform Crime Reporting (UCR) Program, is the carnal knowledge of a female forcibly and against her will. Assaults and attempts to commit rape by force or threat of force are also included; however, statutory rape (without force) and other sex offenses are excluded.

## **Trend**

	Year	Number of offenses	Rate per 100,000 inhabitants
	2003	93,883	32.3
	2004	94,635	32.2
P	Percent change	+0.8	-0.2

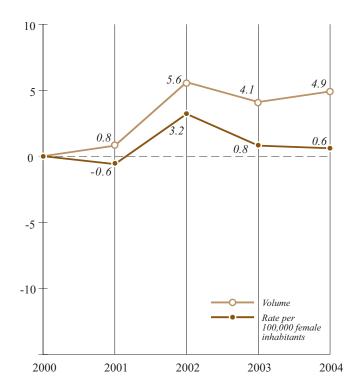

## Offense Methodology

The UCR Program counts one offense for each female victim of a forcible rape, attempted forcible rape, or assault with intent to rape, regardless of the victim's age. The Program classifies as Part II offenses all other crimes of a sexual nature and, as such, collects only arrest statistics concerning them. Statutory rape, in which no force is used but the female victim is under the age of consent, is included in the aggregated arrest total for the sex offenses category. Sexual attacks on males are counted as aggravated assaults or sex offenses, depending on the circumstances and the extent of any injuries.

## Figure 2.5

## **Forcible Rape**

Percent Change from 2000

## **National Volume, Trends, and Rates**

During 2004, approximately 94,635 females nationwide were victims of forcible rape. (See Table 1.) This estimate represents a small increase of 0.8 percent from the 2003 number and a 4.9-percent rise from the 2000 figure. However, the 2004 data showed a 2.9-percent decrease when compared to the 1995 estimated volume of female forcible rapes.

In preparing rate tables for inclusion in this report, the UCR Program's computer system automatically calculates offense rates per 100,000 persons for all Part I crimes. Thus, the rate data that appear in the trend box above and in subsequent tables in this book are based upon the total U.S. population. However, in preparing this narrative, UCR Program staff manually recalculated the 2004 rate of female rapes based upon the national female population provided by the U.S. Bureau of the Census. The recalculation resulted in a rate of 63.5 (63.46) rape victims per 100,000 females. The 2004 rate was virtually unchanged from the prior year's estimate (63.54). Although the 2004 rate is 1.1 percent higher than the 2000 rate of 62.7, it is 12.4 percent lower than the 1995 rate, which was 72.5 forcible rapes per 100,000 females. (See Tables 1 and 1A.)

Of the forcible rapes in 2004, law enforcement agencies reported that 91.6 percent were completed; the remainder were attempts or assaults to rape. (Based on Table 19.)

## Regional Offense Trends and Rates

The national UCR Program conducts regional analyses of crime by separating the United States into four areas: the Northeast, the Midwest, the South, and the West. (A map delineating these regions appears in Appendix III.) The following commentary offers estimates of the volume of female rapes, the percent change from the prior year's estimate, and the rate of rape per 100,000 female residents within each region. Although the 2-year trend (2004 vs 2003) indicated that the rate of female rapes was virtually unchanged nationally, the regional breakdowns revealed some variations from the prior year's data. (Based on Tables 3 and 4.)

#### The Northeast

During 2004, 12,243 forcible rapes of females—12.9 percent of the national total—occurred in the Northeastern states. The region's rate of 44.2 forcible rapes per 100,000 females was the Nation's lowest and reflected a 2.9-per-

## **Table 2.17**

# **Forcible Rape**Percent Distribution by Month, 2000-2004

Month	2000	2001	2002	2003	2004
January	8.0	7.7	7.6	7.9	8.1
February	7.5	7.1	7.0	6.8	7.7
March	8.5	8.4	7.8	8.3	8.7
April	8.0	8.3	8.6	8.0	8.4
May	9.0	8.8	9.0	9.0	9.0
June	9.1	8.7	9.0	8.8	8.5
July	9.5	9.7	9.6	9.5	9.2
August	9.3	9.4	9.5	9.6	9.0
September	8.4	8.6	9.1	8.9	8.4
October	8.3	8.5	8.4	8.4	8.5
November	7.5	7.6	7.4	7.8	7.6
December	6.9	7.2	6.9	7.1	7.0

cent decrease from the 2003 rate, which was 45.5.

### The Midwest

Approximately one quarter of all female rapes during 2004 (25.3 percent) happened in the Midwest Region. With an estimated 23,900 forcible rapes of females, this region had the highest rate: 71.6. The 2004 rate represented a small increase (0.7 percent) over the 71.1 rate estimated for 2003.

### The South

The South, the most populous region of the United States, accounted for 38.2 percent of the national total of female rapes. Based on an estimated 36,113 female victims in 2004, the rate of forcible rapes for the region was 67.1 per 100,000 females. This rate was a 1.3-percent increase compared with the 2003 estimate of 66.3 offenses per 100,000 females.

### The West

In 2004, the West accounted for 23.6 percent of the total forcible rapes of females. The estimated 22,379 offenses yielded a rate of 65.4 rapes per 100,000 females. The 2004 rate declined 1.7 percent from the estimated 66.5 per 100,000 females in 2003.

## **Community Types**

Using the U.S. Office of Management and Budget's designations, the UCR Program aggregates crime data by the type of community in which the offenses occur: Metropolitan Statistical Areas (MSAs), cities outside MSAs, and nonmetropolitan counties. (Appendix III provides more detailed information about community types.)

### **MSAs**

Nearly 83 percent (82.9) of the U.S. population resided in an MSA during 2004, and this community type accounted for 84.0 percent of the

forcible rapes of females nationwide. An estimated 79,531 females were forcibly raped within metropolitan areas, a figure that yielded a rate of 64.4 offenses per 100,000 females. (Based on Table 2.)

### Cities Outside MSAs

Cities outside MSAs are mostly incorporated areas served by city law enforcement agencies. Though accounting for only 6.8 percent of the national population in 2004, this type of community had the highest rate of forcible rapes of females, 76.4 per 100,000 females. By volume, cities outside metropolitan areas accounted for about 8.2 percent of the national total of forcible rapes of females, approximately 7,732 offenses. (Based on Table 2.)

### Nonmetropolitan Counties

In 2004, approximately 10.4 percent of the Nation's inhabitants resided in a nonmetropolitan county, that is, one made up of mostly unincorporated areas served by noncity law enforcement agencies. Collectively, those areas had approximately 7,372 forcible rapes of females, 7.8 percent of the national total. Among the three community types, nonmetropolitan counties had the lowest rate of forcible rapes per 100,000 females—47.7. (Based on Table 2.)

## **Clearances**

In the UCR Program, law enforcement agencies may clear an offense by the arrest of at least one person or by exceptional means. An exceptional clearance is reported when some element beyond the control of law enforcement precludes the agency from making an arrest that otherwise would be accomplished; for example, the victim refuses to cooperate with the prosecution. (Section III provides more information concerning clearances.)

Nationwide in 2004, law enforcement agencies cleared, either by arrest

or by exceptional means, 41.8 percent of reported forcible rapes. Among the Nation's cities, the overall clearance rate for forcible rape was 40.1 percent. Cities with fewer than 10,000 inhabitants had the highest clearance rate (43.8 percent), and those with populations of 100,000 to 249,999 had the lowest rate (38.1 percent). County law enforcement agencies cleared 46.8 percent of the forcible rapes that occurred in metropolitan counties and 45.8 percent of those that took place in nonmetropolitan counties. (See Table 25.)

By region, law enforcement agencies in the Northeast cleared 46.0 percent of reported forcible rapes in 2004, compared with 45.2 percent in the South, 39.9 percent in the West, and 35.2 percent in the Midwest. (See Table 26.)

### Clearances and Juveniles

Juvenile clearances are reported when a person under the age of 18 is cited to appear in a juvenile court or is turned over to another juvenile authority; it is not necessary for an arrest to actually occur. Importantly, according to the UCR Program's definitions, when a law enforcement agency clears a crime involving both juveniles and adults, the agency classifies the action as an adult clearance. A juvenile clearance is recorded when a crime involves only juveniles. For this reason, juvenile clearance data may not reflect the total involvement in crime of youthful offenders.

In 2004, clearances nationwide involving only juveniles made up 12.2 percent of the total number of clearances for forcible rape. Among the Nation's cities, the proportion of forcible rape clearances classified as juvenile ranged from a low of 8.2 percent in the largest cities (250,000 and over in population) to a high of 14.1 percent in cities with populations of 25,000 to 49,999. County law enforcement agencies classified as juvenile clearances 14.3 percent of the total number of forcible rapes cleared in metropolitan counties and 15.2 percent of those cleared in nonmetropolitan counties. (See Table 28.)

## Robbery content revised 02/17/06

## **Definition**

The Uniform Crime Reporting (UCR) Program defines robbery as the taking or attempting to take anything of value from the care, custody, or control of a person or persons by force or threat of force or violence and/or by putting the victim in fear.

### **Trend**

Year	Number of offenses	Rate per 100,000 inhabitants
2003	414,235	142.5
2004	401,326	136.7
Percent change	-3.1	-4.1

### National Volume, Trends, and Rates

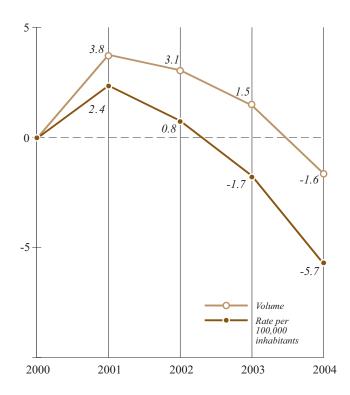

Marking the third straight year of a decline in the number of robberies nationwide, the 2004 estimate of 401,326 offenses reflected a 3.1-percent decline from the 2003 estimate. The number of robberies also declined in the 5- and 10-year trends, though the number of robberies in 2004 showed a lesser decrease (1.6 percent) from the 2000 estimate, the drop was greater (30.9 percent) compared with the 1995 data.

A decline was also evident in the Nation's robbery rate in the same target years. The rate of robbery in the Nation in 2004 was 136.7 robberies per 100,000

## Figure 2.6

### **Robbery**

Percent Change from 2000

inhabitants, a decrease of 4.1 percent compared with the 2003 rate. The 5-year trend showed a decline of 5.7 percent from the 2000 rate, and, as with the trend for the volume of robberies, the 10-year trend for the robbery rate revealed a larger drop (38.1 percent) compared with the 1995 rate. (See Tables 1 and 1A.)

## Regional Offense Trends and Rates

The UCR Program divides the United States into four regions: the Northeast, the Midwest, the South, and the West. (Appendix III provides a map delineating the regions.) The following paragraphs furnish a regional overview of robbery.

### The Northeast

The Northeast, with an estimated 18.6 percent of the country's population in 2004, accounted for 19.5 percent of the Nation's robberies. (See Table 3.) The estimated number of robberies in the region was a 3.3-percent decline from the 2003 level. The rate in the Northeast was measured at 143.6 robberies per 100,000 inhabitants, a 3.5-percent drop from the 2003 rate. (See Table 4.)

## The Midwest

In 2004, an estimated 22.4 percent of the Nation's population resided in the Midwest, and 19.1 percent of all robberies

took place there. (See Table 3.) Compared with the 2003 total, the number of robberies in the Midwest decreased 1.6 percent. The robbery rate (116.8 offenses per 100,000 persons) was the lowest among the four regions and declined 2.1 percent compared with the previous year's rate. (See Table 4.)

#### The South

The most populous region, the South, accounted for an estimated 36.1 percent of the country's population and an estimated 38.4 percent of the Nation's robberies. (See Table 3.) The number of estimated robberies showed a 4.1-percent drop from the 2003 level. The region experienced the highest rate (145.6 robberies per 100,000 inhabi-

### **Table 2.18**

# **Robbery**Percent Distribution by Month, 2000-2004

Month	2000	2001	2002	2003	2004	
January	8.6	8.3	8.8	8.5	8.6	
February	7.1	6.5	6.7	6.5	6.9	
March	7.7	7.6	7.6	8.0	7.8	
April	7.5	7.4	7.4	7.9	7.7	
May	8.1	8.1	8.0	8.4	8.2	
June	7.9	8.0	7.9	8.2	8.2	
July	8.7	8.7	8.8	8.8	8.9

October	9.1	9.7	9.1	9.0	9.0	
November	8.7	9.2	8.6	8.4	8.6	
December	9.0	9.4	9.2	9.1	8.9	

tants) among the regions but, conversely, saw the greatest decline (5.4 percent) in the rate from the previous year. (See Table 4.)

### The West

The West was home to an estimated 23.0 percent of the Nation's population in 2004 and accounted for 22.9 percent of the robbery total. (See Table 3.) The estimated number of robberies for the region was down 2.5 percent from the 2003 estimate. The rate in Western states (136.5 robberies per 100,000 persons) was down 3.9 percent from the 2003 rate. (See Table 4.)

### **Community Types**

The UCR Program aggregates data by three community types: Metropolitan Statistical Areas (MSAs), cities outside metropolitan areas, and nonmetropolitan counties. MSAs include a central city or urbanized area with at least 50,000 inhabitants and the county that contains the principal city and other adjacent counties that have, as defined by the Office of Management and Budget, a high degree of economic and social integration with the principal city and county as measured through commuting. Cities outside MSAs are mostly incorporated areas, and nonmetropolitan counties are made up of mostly unincorporated areas served by noncity law enforcement agencies.

Nearly 83 percent (82.9) of the Nation's residents lived in MSAs in 2004, and 96 percent of the Nation's robberies occurred within these metropolitan areas. Robberies occurred in MSAs at a rate of 158.3 offenses per 100,000 persons. Nonmetropolitan counties comprised 10.4 percent of the Nation's total population and accounted for 1.2 percent of the robberies committed in the United States. The rate was 15.5 robberies per 100,000 inhabitants in this type of community. Cities outside metropolitan areas made up 6.8 percent of the U.S. population and had 2.9 percent of the total robberies. The rate in these areas was 57.7 robberies per 100,000 in population. (See Table 2.)

# Population Groups: Trends and Rates

The national UCR Program aggregates data by various population groups, which include cities, metropolitan counties, and nonmetropolitan counties. A definition of these groups can be found in Appendix III. Most of the population groups experienced declines in the number of robberies in 2004 compared with the previous year's data. Robberies in cities as a whole decreased 3.7 percent. Among the population groups labeled city, the Nation's largest cities, those with 250,000 and over in population, had the greatest decrease (5.5 percent) in the number of robberies. Nonmetropolitan counties had the largest decline (7.1 percent) among all population groups compared with the prior year's data. Metropolitan counties showed a 2.3percent decline in the robbery volume. (See Table 12.)

Among the population groups, the Nation's cities, collectively, had a rate of 190.2 robberies per 100,000 inhabitants. Of the population groups

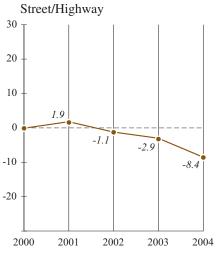

## **Table 2.19**

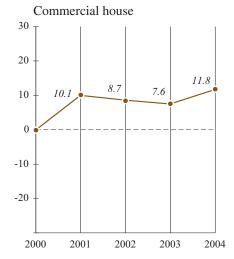

## Robbery, Location

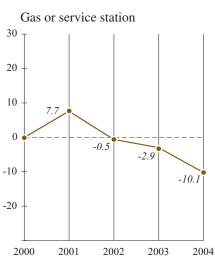

Percent Distribution by Region, 2004

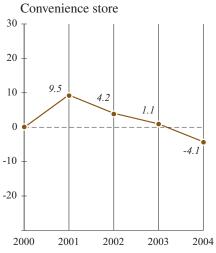

Туре	United States total	Northeast	Midwest	South	West
Total <sup>1</sup>	100.0	100.0	100.0	100.0	100.0
Street/highway	42.8	53.2	45.2	36.3	43.4

Bank	2.4	3.6	2.8	2.0	2.6
Miscellaneous	17.4	12.5	18.7	18.1	18.9

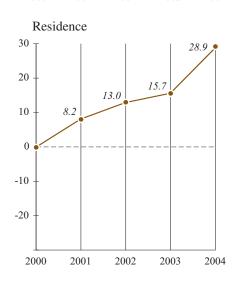

<sup>&</sup>lt;sup>1</sup> Because of rounding, the percentages may not add to 100.0.

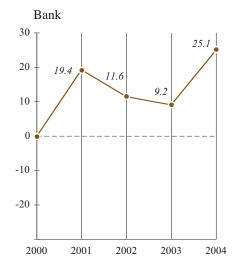

designated *city*, those with 250,000 and over in population had the highest rate (358.1 robberies per 100,000 inhabitants), and the Nation's smallest cities, those with under 10,000 persons, experienced the lowest rate (52.1 robberies per 100,000 in population). Of the two county groups, the Nation's metropolitan counties had a rate of 66.3 robberies per 100,000 residents, and nonmetropolitan counties, a rate of 15.7. (See Table 16.)

## Offense Analysis

The UCR Program collects supplemental data about robberies to document the use of weapons, the dollar loss associated with the offense, and the location types.

### Robbery by Weapon

An examination of the 2004 supplemental data regarding the type of weapons offenders used in the commission of the robbery revealed that assailants relied on strong-arm tactics in 41.1 percent of robberies during 2004; they employed firearms in 40.6 percent of robberies. Offenders used knives or other cutting instruments in 8.9 percent of these

crimes. In the remaining 9.4 percent of robberies, the offenders used other types of weapons. (See Table 19.)

### Loss by Dollar Value

Based on law enforcement agencies' supplemental reports, robberies cost victims, collectively, an estimated \$525 million. (Based on Tables 1 and 23.) The average loss per robbery was \$1,308. Average dollar losses were highest for banks, which lost \$4,221 per offense. Gas and service stations lost an average of \$1,749. Commercial houses, which include supermarkets, department stores, and restaurants, had average losses of \$1,529. An average of \$1,488 was taken from residences; individuals lost an average \$923 from robberies on streets and highways. An average of \$653 per robbery was taken at convenience stores. An average of \$1,682 per robbery was taken in all other types of robberies, cumulatively. (See Table 23.)

### Robbery Trends by Location

Among the location types, robberies from banks increased 14.6 percent from 2003 to 2004. Robberies that occurred at residences increased 11.4 percent,

and those at commercial houses rose 3.9 percent. However, the greatest decrease (7.4 percent) occurred in robberies of gas or service stations. The number of robberies on streets and highways dropped 5.6 percent, and robberies at convenience stores fell 5.2 percent. The cumulative total of robberies that took place in all other locations increased 5.1 percent in 2004 in relation to the totals from 2003. (See Table 23.)

### Percent Distribution

By location type, the greatest proportion of robberies (42.8 percent) in 2004 occurred on streets and highways. Robbers targeted commercial houses in 14.7 percent of the offenses and residences in 13.8 percent. Convenience stores were the site of 6.1 percent of robberies, followed by gas or service stations, 2.7 percent. The smallest percentage of robberies (2.4 percent) occurred at banks. In addition, 17.4 percent of robberies occurred in other types of locations. (See Table 23.)

 $<sup>^{\</sup>scriptscriptstyle 1}$  Because of rounding, the percentages may not add to 100.0.

#### Clearances

In the UCR Program, law enforcement can clear offenses either by arrest or by exceptional means, i.e., when elements beyond the control of law enforcement prevent the placing of formal charges against the offender. (Section III provides more information regarding clearances.) In 2004, law enforcement agencies cleared 26.2 percent of robberies through arrests or exceptional means. Law enforcement in the Nation's cities, collectively, cleared 25.3 percent of robberies. Within the city population groups, law enforcement in the smallest cities, those with populations under 10,000, cleared the highest percentage of robberies (34.8 percent) that occurred within their jurisdictions. Law enforcement in the largest cities—250,000 and over in population—cleared the smallest proportion of robberies (22.0 percent). For the Nation's two population groups labeled as county, law enforcement agencies in metropolitan counties cleared 31.7 percent of robberies and those in nonmetropolitan counties cleared 40.6 percent. (See Table 25.)

Among the Nation's four regions, law enforcement agencies in the Northeast cleared the highest percentage of their robberies (30.1 percent). Agencies in the South cleared 26.3 percent of robberies, followed by the West (26.1 percent) and the Midwest (22.3 percent). (See Table 26.)

### Clearances and Juveniles

When a law enforcement agency clears a crime that involved only a juvenile(s), the clearance is not dependent upon an arrest. For instance, when an offender under the age of 18 is cited to appear before juvenile authorities, the UCR Program considers the incident cleared by arrest, even though a physical arrest may not have occurred. However, clearances of crimes that involved both adult

and juvenile offenders are reported as a clearance for an offense committed by an adult. For more information on clearances, see Section III, Offenses Cleared.

Nationally, 14.4 percent of the clearances for robbery involved juveniles only. By population group, robbery clearances involving juveniles only accounted for 14.6 percent of the total number of clearances in the Nation's cities, 13.7 percent in metropolitan counties, and 6.8 percent of robbery clearances in nonmetropolitan counties. (See Table 28.)

**Table 2.21** 

## **Robbery, Types of Weapons Used** Percent Distribution by Region, 2004

			Armed

<sup>&</sup>lt;sup>1</sup> Because of rounding, the percentages may not add to 100.0.

## Aggravated Assault content revised 02/17/06

### **Definition**

The Uniform Crime Reporting (UCR) Program defines aggravated assault as an unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. The Program further specifies that this type of assault is usually accompanied by the use of a weapon or by other means likely to produce death or great bodily harm. Attempted aggravated assault that involves the display of—or threat to use—a gun, knife, or other weapon is included in this crime category because serious personal injury would likely result if the assault

were completed. When aggravated assault and larcenytheft occur together, the offense falls under the category of robbery.

### **Trend**

	Year	Number of offenses	Rate per 100,000 inhabitants
	2003	859,030	295.4
	2004	854,911	291.1
Ì	Percent change	-0.5	-1.5

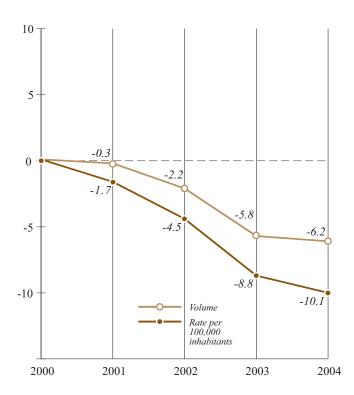

## **National Volume, Trends, and Rates**

For 11 consecutive years, the estimated number of aggravated assaults nationwide has declined. In 2004, occurrences of this offense decreased 0.5 percent compared with the 2003 number, down to 854,911 offenses. Five- and 10-year trend data for aggravated assault showed declines of 6.2 percent and 22.2 percent, respectively.

## Figure 2.8

## Aggravated Assault

Percent Change from 2000

The 2004 data also showed a decline in the frequency of aggravated assaults per 100,000 inhabitants. The rate, estimated at 291.1 offenses per 100,000 inhabitants nationwide, decreased 1.5 percent compared with the 2003 rate, 10.1 percent from that in 2000, and 30.4 percent from the 1995 rate. (See Tables 1 and 1A.)

Among the four types of offenses classified as violent crime (murder, forcible rape, robbery, and aggravated assault), aggravated assault typically has the highest percentage of occurrences. The trend continued in 2004 with this offense accounting for an estimated 62.5 percent of violent crime.

## **Regional Offense Trends and Rates**

The UCR Program defines four regions within the United States: the Northeast, the Midwest, the South, and the West. (See Appendix III for a definition of each region.) Across three regions in 2004, both the estimated number and the estimated rate of aggravated assaults declined from the previous year; the South, however, experienced a 1.2-percent increase in the number of offenses and a slight decrease (0.2 percent) in the rate per 100,000 inhabitants. (See Table 4.)

### The Northeast

The region with the smallest proportion of the population in the United States (18.6 percent), the Northeast also typically has the fewest aggravated assaults. This trend continued in 2004 as an estimated 14.1 percent of the total number of aggravated assaults took place in the Northeastern states. (See Table 3.) Occurrences of this offense fell 2.0 percent from the previous year's number, down to an estimated 120,374. The region also had the lowest rate of this offense nationwide: estimated at 220.6 aggravated assaults per 100,000 inhabitants, a 2.3-percent decline from the prior year's rate. (See Table 4.)

### **Table 2.22**

## **Aggravated Assault** Percent Distribution by Month, 2000-2004

Month 2000 2001 2002 2003 2004 January 7.5 7.5 7.5 7.5 7.5 February 7.2 6.7 6.7 6.4 7.0 8.0 8.3 March 8.3 8.1 8.4 8.4 8.5 8.4 8.5 8.5 April 93 9.0 9.0 9.2 94 May June 8.9 8.9 9.2 9.1 8.9 July 9.5 9.6 9.6 9.4 9.4 9.0 9.0 9.4 9.4 August 9.1 September 8.8 9.4 8.7 8.6 8.6 October 8.6 8.7 8.4 8.7 8.5 November 7.3 7.7 7.3 7.7 7.4 7.2 7.1 7.2 7.5 December 7.5

#### The Midwest

With 22.4 percent of the Nation's population in 2004, the Midwest had approximately 17.9 percent of the aggravated assaults. (See Table 3.) Occurrences of this offense declined 2.1 percent from the previous year's number, down to an estimated 153,280. The rate, estimated at 233.2 offenses per 100,000 inhabitants, declined 2.5 percent. (See Table 4.)

### The South

Accounting for an estimated 36.1 percent of the Nation's population in 2004, the South was the most populous region and had the highest percentage of aggravated assaults: an estimated 43.9 percent. (See Table 3.) From 2003 to 2004, the number of offenses increased 1.2 percent, to an estimated 375,413. In contrast, the frequency of this offense, estimated at 354.3 aggravated assaults per 100,000 inhabitants, decreased 0.2 percent. (See Table 4.)

#### The West

In 2004, the West was home to 23.0 percent of the U.S. population and experienced an estimated 24.1 percent of the Nation's aggravated assaults. (See Table 3.) From 2003 to 2004, the estimated number of offenses for this region declined 1.4 percent, down to 205,844. The rate, estimated at 305.4 offenses per

100,000 inhabitants, declined 2.8 percent. (See Table 4.)

## **Community Types**

The UCR Program aggregates crime data by three community types: Metropolitan Statistical Areas (MSAs), cities outside metropolitan statistical areas, and nonmetropolitan counties. By definition, an MSA has a principal city with at least 50,000 inhabitants. It includes the county that contains the principal city and adjacent counties that share a high degree of economic and social integration with the principal city and county as measured by commuting. Cities outside the MSAs are mostly incorporated areas, and nonmetropolitan counties are composed of unincorporated areas. (For additional information regarding community types, see Appendix III.)

In 2004, most of the Nation's population (82.9 percent) lived in the MSAs, where the rate of aggravated assaults was an estimated 308.9 per 100,000 inhabitants. Cities outside the MSAs (with 6.8 percent of the U.S. population) had the next-highest rate of this offense (277.0 per 100,000 inhabitants). Nonmetropolitan counties (with 10.4 percent of the population) had 158.1 aggravated assaults per 100,000 inhabitants. (Based on Table 2.)

# Population Groups: Trends and Rates

To calculate 2-year trend data for population groups, the UCR Program staff reviewed reports from all agencies that submitted statistics on aggravated assaults for at least 6 common months in 2003 and 2004. (For an explanation of population-group designations and the number of agencies contributing to the UCR Program, see Appendix III; for the methodology used in tabular presentations, see Appendix I.)

## **Table 2.23**

## **Aggravated Assault, Types of Weapons Used**

Percent Distribution by Region, 2004

Region	Total all weapons <sup>1</sup>	Firearms	Knives or cutting instruments	Other weapons (clubs, blunt objects, etc.)	Personal weapons (hands, fists, feet, etc.)
Total	100.0	19.3	18.6	35.6	26.6
Northeast	100.0	14.7	19.8	34.3	31.1
Midwest	100.0	19.7	17.4	33.7	29.2
South	100.0	20.8	19.7	37.7	21.8
West	100.0	18.4	16.7	33.3	31.5

<sup>&</sup>lt;sup>1</sup> Because of rounding, the percentages may not add to 100.0.

From 2003 to 2004, the number of aggravated assaults in four of six city population groups decreased. Cities with populations of 50,000 to 99,999 experienced the smallest decline in this offense, 0.6 percent. The greatest decline was in the Nation's largest cities, those with populations of 250,000 and over, where the number of offenses decreased 1.7 percent. In two city groups the number of offenses increased: 0.2 percent in cities with populations under 10,000 and 1.3 percent in cities with 25,000 to 49,999 in population. Within metropolitan counties, the number of aggravated assaults decreased 1.5 percent; in nonmetropolitan counties, however, it increased 1.2 percent. (See Table 12.)

Based on reports from agencies submitting 12 months of complete data for 2004, aggravated assault occurred at an estimated rate of 302.5 offenses per 100,000 inhabitants nationwide. In cities collectively, the rate was 343.9. Among the city population groups, the rate ranged from a high of 520.2 offenses per 100,000 inhabitants (cities with populations of 250,000 and over) to a low of 201.8 offenses (cities with populations of 10,000 to 24,999). The rate was 234.9 in metropolitan counties, and 171.2 in nonmetropolitan counties. (See Table 16.)

### **Offense Analysis**

### Aggravated Assault by Weapon

The UCR Program collects data about the type of weapons used in aggravated assaults. During 2004, personal weapons (i.e., hands, fists, feet, etc.) were used in 26.6 percent of the offenses; firearms, 19.3 percent; and knives or cutting instruments, 18.6 percent. Weapons in the category of "other" were used in the remaining 35.6 percent of this offense. (Based on Table 19.)

An analysis by weapon type showed that the rate of aggravated assaults per 100,000 persons was 77.8 with personal weapons, 56.5 with firearms, 54.3 with knives or cutting instruments, and 104.1 with weapons in the "other" category. (See Table 19.)

### **Clearances**

In the UCR Program, an offense can be cleared either by arrest or by exceptional means, i.e., when conditions beyond the control of law enforcement prevent placing formal charges against the offender. (For a further explanation of clearances, see Section III.) In 2004, law enforcement agencies nationwide collectively cleared 55.6 percent of aggravated assaults. Data in Table 26, a breakdown of clearances by region, showed that the percent of offenses cleared was lowest in the Midwest (51.9 percent) and highest in the Northeast (62.9 percent). In the South, agencies cleared 54.2 percent of aggravated assaults; in the West, 57.1 percent. Law enforcement in cities collectively cleared 53.4 percent of their aggravated assaults. In a breakdown by city population group, clearances ranged from a high of 64.1 percent (cities under 10,000 in population) to a low of 48.5 percent (250,000 and over in population). Law enforcement agencies in metropolitan counties cleared 61.5 percent; those in nonmetropolitan counties cleared 64.4 percent of their aggravated assaults. (See Table 25.)

### Clearances and Juveniles

In certain circumstances involving juveniles, a law enforcement agency may report that an offense is cleared by arrest even when no physical arrest is made. This type of clearance must meet the following criteria: the offender is under the age of 18 and is cited to appear in juvenile court or before other juvenile authorities. When a clearance

involves both adult and juvenile offenders, it is reported as an adult clearance.

In 2004, of the clearances for aggravated assault reported nationwide, 11.8 percent involved only juveniles. A breakdown of this statistic by population group shows that law enforcement in cities collectively reported that 12.0 percent of clearances involved only juveniles. Agencies in cities with populations of 10,000 to 24,999 reported the highest percent of clearances involving only juveniles (14.2 percent), and those agencies in cities having 250,000 and over in population reported the lowest (9.7 percent). In metropolitan counties, 12.1 percent of clearances for aggravated assault involved only juveniles; in nonmetropolitan counties, 9.0 percent involved only juveniles. (See Table 28.)

## Property Crime content revised 02/17/06

### **Definition**

In the Uniform Crime Reporting (UCR) Program, property crime includes the offenses of burglary, larceny-theft, motor vehicle theft, and arson. The object of the theft-type offenses is the taking of money or property, but there is no force or threat of force against the victims. The property crime category includes arson because the offense involves the destruction of property; however, arson victims may be subjected to force. Because of limited participation and varying collection procedures by local agencies, only limited data are available for arson. Arson statistics are included in trend, clearance, and arrest tables throughout

*Crime in the United States*, but they are not included in any estimated volume data. The arson section in this report provides more information on that offense.

#### Trend

	Year	Number of offenses <sup>1</sup>	Rate per 100,000 inhabitants <sup>1</sup>
	2003	10,422,862	3,591.2
	2004	10,328,255	3,517.1
1	Percent change	-1.1	-2.1

<sup>&</sup>lt;sup>1</sup>Does not include arson. See Offense Tabulations.

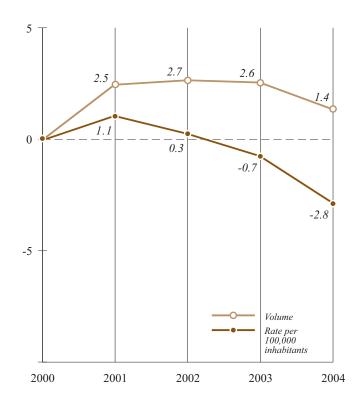

### National Volume, Trends, and Rates

An estimated 10,328,255 property crimes were committed in the Nation in 2004, representing a 1.1-percent decrease from the 2003 estimate, a 1.4-percent increase compared with the 2000 estimate, and a 14.4-percent decrease from the 1995 estimate.

## Figure 2.9

## **Property Crime**

Percent Change from 2000

In 2004, each of the individual property crimes showed a decrease from the 2003 estimates. The number of motor vehicle thefts was down 1.9 percent, the number of larceny-thefts was down 1.1 percent, and the number of burglaries was down 0.5 percent. (See Tables 1 and 1A.)

The estimated property crime rate per 100,000 inhabitants (3,517.1) in 2004 declined 2.1 percent when compared with the 2003 rate. When compared with data from 2000, the rate was down 2.8 percent, and when compared with the 1995 figure, the rate had decreased 23.4 percent. (See Tables 1 and 1A.)

## Regional Offense Trends and Rates

The UCR Program separates the United States into four regions: the Northeast, the Midwest, the South, and the West. (Geographic region breakdowns can be found in Appendix III.) Property crime data collected by the UCR Program and aggregated by region reflected the following:

### The Northeast

The Northeast Region accounted for 18.6 percent of the Nation's population

in 2004; 12.5 percent of the estimated number of property crimes that were committed in the Nation occurred in that region. (See Table 3.) In 2004, law enforcement in the Northeast had a 2.1-percent decrease in property crimes from the previous year's figure. The property crime rate, estimated at 2,358.9 per 100,000 inhabitants, decreased 2.4 percent from the 2003 number. (See Table 4.)

### The Midwest

The Midwest, comprised of 22.4 percent of the Nation's population in 2004, accounted for 20.9 percent of the estimated number of property crimes in the United States. (See Table 3.) Law enforcement in the Midwest Region had a 2.5-percent decrease in property crimes from the previous year's figure. Estimated at a rate of 3,281.0 property crimes per 100,000 in population, the 2004 figure decreased 2.9 percent from the 2003 data. (See Table 4.)

### The South

Just over 36 percent (36.1) of the Nation's population resided in the South in 2004, and law enforcement agencies in the region had an estimated 41.3 percent of the country's property crimes. (See Table 3.) When compared with data from the previous year, the South

## **Table 2.24**

# **Property Crime**Percent Distribution by Month, 2000-2004

Month	2000	2001	2002	2003	2004
January	7.8	7.8	8.3	8.0	8.0
February	7.3	6.8	7.0	6.7	7.1
March	8.2	7.8	7.8	8.0	8.2
April	7.9	7.9	8.0	8.2	8.1
May	8.6	8.5	8.5	8.6	8.5
June	8.6	8.5	8.4	8.5	8.6
July	9.1	9.1	9.2	9.1	9.0
August	9.2	9.1	9.0	9.0	8.9
September	8.5	8.5	8.6	8.7	8.4
October	8.8	9.2	8.8	8.8	8.7
November	8.1	8.5	8.1	8.1	8.3
December	8.0	8.5	8.3	8.3	8.3

had a decrease of 0.8 percent in the estimated number of property crimes. The 2004 property crime rate, 4,022.2 per 100,000 inhabitants, was 2.2 percent lower than the 2003 rate. (See Table 4.)

#### The West

In 2004, the West accounted for 23.0 percent of the Nation's total population, and 25.4 percent of the country's property crimes. (See Table 3.) From 2003 to 2004, the estimated number of property crimes in the West increased slightly (+0.2 percent). The rate was estimated at 3,891.2 property crimes per 100,000 inhabitants, a 1.3-percent decline from the 2003 rate. (See Table 4.)

## **Community Types**

The UCR Program aggregates data by three community types: Metropolitan Statistical Areas (MSAs), cities outside metropolitan statistical areas, and nonmetropolitan counties. (Additional in-depth information regarding community types is located in Appendix III.) In 2004, an estimated 82.9 percent of the Nation's population resided in an MSA. The rate in this community type was 3,697.1 property crimes per 100,000 inhabitants. Cities outside metropolitan areas, comprising 6.8 percent of the Nation's population, had a rate of 4,109.5 property crimes per 100,000 in population. Nonmetropolitan counties accounted for an estimated 10.4 percent of the Nation's inhabitants. These counties had a rate of 1,690.5 property crime offenses per 100,000 inhabitants. (See Table 2.)

# Population Groups: Trends and Rates

The UCR Program organizes the agencies that contribute data into population groups, which include cities, metropolitan counties, and nonmetropolitan counties. (Appendix III of this book provides an explanation of these groups.) From

2003 to 2004, law enforcement in the Nation's cities collectively reported a 1.8-percent decrease in the number of property crimes. All city population groups experienced decreases, with the largest decrease, 3.3 percent, in cities with populations of 250,000 or more. Nonmetropolitan and metropolitan counties experienced decreases of 1.1 and 0.9 percent, respectively. (See Table 12.)

The country's cities collectively had a rate of 4,240.2 property crime offenses per 100,000 inhabitants.

Nonmetropolitan counties had a property crime rate of 1,743.9 per 100,000 people, and metropolitan counties experienced a rate of 2,529.6 offenses per 100,000 inhabitants. Property crime rates for each of the population groups are furnished in Table 16.

### Offense Analysis

The estimated dollar loss attributable to property crimes (excluding arson) in 2004 was \$16.1 billion, representing a 5.0-percent decrease when compared with the 2003 estimate. Among the individual property crimes, the dollar losses were an estimated \$3.5 billion for burglary, nearly \$5.1 billion for larceny-theft, and \$7.6 billion for motor vehicle theft. (Based on Table 1 and Table 23.) Arson had an average dollar loss of \$12,017 for the 63,215 offenses for which monetary figures were reported. (See Table 2.31.)

#### **Clearances**

Law enforcement agencies reporting crime to the UCR Program can clear, or "close," the offense in one of two ways: by arrest or, when elements are beyond the control of law enforcement prevent the agency from arresting and formally charging the offender, by exceptional means. (Additional information regarding clearances is provided in Section III, Offenses Cleared.)

Nationwide in 2004, law enforcement agencies, collectively, cleared 16.5 percent of property crimes. Agencies in cities cleared 16.4 percent of property crimes. Law enforcement in cities with populations of 10,000 to 24,999 cleared the largest proportion of their property crimes (20.9 percent) and those in cities with populations of 250,000 and over cleared the smallest percentage of their property crimes, slightly less than 13 percent (12.9). Metropolitan county law enforcement agencies reported 16.9 percent of property crimes cleared by arrest or exceptional means, and agencies in nonmetropolitan counties reported 17.8 percent of property crimes cleared. (See Table 25.)

Regionally, law enforcement agencies in the Northeast cleared the highest percentage of property crimes at 20.2 percent. Law enforcement agencies in the South cleared 16.9 percent; those in the Midwest, 16.2 percent; and agencies in the West cleared 14.6 percent of property crimes. (See Table 26.)

## Clearances and Juveniles

Special conditions exist concerning clearances and juveniles. Data users should know that when an offender under the age of 18 is cited to appear in juvenile court or before other juvenile authorities, the UCR Program considers the incident for which the juvenile is being held responsible to be cleared by arrest, although a physical arrest may not have occurred. In addition, clearances that include both adult and juvenile offenders are classified as clearances for crimes committed by adults. Additional details concerning clearances as they relate to juveniles are provided in Section III, Offenses Cleared.

In 2004, 18.9 percent of the property crime clearances nationwide involved persons under the age of 18. In cities collectively, 19.6 percent of the clearances for property crime involved

juveniles only. Among the population groups labeled *city*, the percentages of clearances involving only juveniles ranged from a low of 16.4 percent in cities with populations of 250,000 and over to a high of 21.7 percent in cities with populations of 50,000 to 99,999. Law enforcement in metropolitan counties reported 16.4 percent of property crime clearances involved persons under the age of 18 and those in nonmetropolitan counties, 14.8 percent. (See Table 28.)

## Burglary content revised 02/17/06

### **Definition**

Burglary is defined in the Uniform Crime Reporting (UCR) Program as the unlawful entry of a structure to commit a felony or theft. The use of force to gain entry is not required to classify an offense as a burglary. Burglary in the UCR program is categorized into three subclassifications: forcible entry, unlawful entry where no force is used, and attempted forcible entry.

### **Trend**

Year	Number of offenses	Rate per 100,000 inhabitants
2003	2,154,834	741.0
2004	2,143,456	729.9
Percent change	-0.5	-1.5

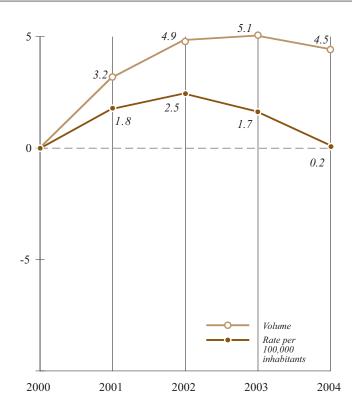

### National Volume, Trends, and Rates

In 2004, an estimated 2.1 million burglary offenses were committed in the United States. This figure (approximately 2,143,456) is a 0.5-percent decline from the 2003 estimate. An examination of 5- and 10-year trends demonstrated a 4.5-percent increase in the number of burglaries when compared with the 2000 estimate, and a 17.4-percent decrease from the 1995 number. Calculated at 729.9 burglaries per 100,000 people, the 2004 rate was a decrease of 1.5 percent from the 2003 rate. Although the

## Figure 2.10

#### **Burglary**

Percent Change from 2000

2004 burglary rate was slightly higher (0.2 percent) than the 2000 rate, it was 26.0 percent lower than the 1995 rate. (See Tables 1 and 1A).

## Regional Offense Trends and Rates

The UCR Program divides the United States into four regions: the Northeast, the Midwest, the South, and the West. (Details regarding the geographic regions are included in Appendix III.) An analysis of burglary data by region showed the following details.

## The Northeast

In 2004, 18.6 percent of the Nation's population inhabited Northeastern states where 11.0 percent of the estimated number of burglary offenses (236,366) occurred. This figure represents a decrease of 2.9 percent when compared to the 2003 estimate. The region's burglary rate, estimated at 433.1 offenses per 100,000 persons, marks a decrease of 3.2 percent from the 2003 rate. (See Tables 3 and 4.)

### The Midwest

The Midwest accounted for 22.4 percent of the Nation's population in 2004 and 19.8 percent, or about 424,892, of the country's burglary offenses. With a rate of 646.4 offenses per 100,000 inhabi-

tants, the Midwest had the lowest rate of burglaries among the regions. By volume, the number of burglaries declined 2.1 percent from the 2003 number, and the rate decreased 2.6 percent from that of the prior year. (See Tables 3 and 4.)

#### The South

The most populous region, the South, had the most burglaries in 2004. With 36.1 percent of the Nation's population, this region accounted for an estimated 968,932 (45.2 percent) of the Nation's burglary offenses. The estimated number of burglaries yielded a rate of 914.6 offenses per 100,000 people, a 1.5-percent decrease from the region's 2003 rate. (See Tables 3 and 4.)

### The West

The West accounted for 23.0 percent of the Nation's total population in 2004 and an estimated 23.9 percent (513,266) of the burglaries that occurred. Overall, the region had a 1.1-percent increase in burglaries from the 2003 total. The estimated rate of 761.4 offenses per 100,000 people was 0.3 percent lower than the 2003 rate. (See Tables 3 and 4.)

### **Community Types**

The UCR Program aggregates data by three community types: Metropolitan

## **Table 2.25**

# **Burglary**Percent Distribution by Month, 2000-2004

Month	2000	2001	2002	2003	2004
January	8.1	7.9	8.5	8.1	8.0
February	7.2	6.6	6.9	6.4	6.8
March	8.0	7.6	7.7	7.8	8.0
April	7.8	7.7	7.8	8.1	7.9
May	8.5	8.3	8.5	8.6	8.3
June	8.4	8.2	8.2	8.4	8.5
July	9.2	9.1	9.1	9.2	9.1
August	9.2	9.1	9.0	9.0	9.0
September	8.6	8.6	8.7	8.8	8.6
October	8.7	9.3	8.8	8.9	8.7
November	8.3	8.9	8.2	8.3	8.6
December	8.1	8.8	8.5	8.5	8.5

Statistical Areas (MSAs), cities outside MSAs, and nonmetropolitan counties. (See Appendix III for more information regarding community types.) In 2004, residents in MSAs accounted for 82.9 percent of the population and experienced an estimated 84.5 percent of the Nation's burglaries. The MSAs' rate of burglaries per 100,000 people was 744.8. Inhabitants of cities outside MSAs accounted for 6.8 percent of the Nation's population in 2004 and 7.6 percent of the number of burglary offenses. The burglary rate in these areas was 822.8 offenses per 100,000 people, the highest rate by community type. Nonmetropolitan counties accounted for 10.4 percent of the Nation's inhabitants, and about 7.8 percent of its burglaries. Burglary offenses in nonmetropolitan counties occurred at an estimated rate of 550.0 per 100,000 people. (Based on Table 2.)

# Population Groups: Trends and Rates

In addition to analyzing data by region and community type, the UCR Program aggregates crime statistics by population groups; cities are categorized into six groups based on the number of inhabitants, and counties are categorized into two groups, metropolitan and nonmetropolitan. (Appendix III offers further details regarding these population groups.)

An examination of data from law enforcement agencies that provided statistics at least 6 common months in 2003 and 2004 showed that the Nation's cities overall experienced a 0.7-percent decrease in burglaries during the 2-year period. Burglaries declined in four of the city groups and increased in two of the city groups. The Nation's largest cities, those with 250,000 or more inhabitants, showed the largest decline, 2.1 percent. Cities with populations of

50,000 to 99,999 had an increase of 1.9 percent, and cities with populations of 10,000 to 24,999 had an increase of 0.6 percent in the number of burglaries in 2004 compared with 2003.

The volume of burglaries declined in both metropolitan and nonmetropolitan counties in 2004. In metropolitan counties, burglary offenses decreased 2.2 percent from the 2003 level, and in nonmetropolitan counties, these offenses went down 2.6 percent. (See Table 12.)

The UCR Program calculates burglary rates for population groups from information provided by participating agencies that submitted all 12 months of offense data for the year. In 2004, the Nation's cities overall had 821.6 offenses per 100,000 people. The largest cities (those with 250,000 or more inhabitants) had the highest rate, 972.9 offenses per 100,000 people, and cities with 10,000 to 24,999 residents had the lowest rate among the city groups, 631.8 burglaries per 100,000 people. Metropolitan counties had a rate of 605.5 offenses per 100,000 people, and nonmetropolitan counties had a rate of 574.4. (See Table 16.)

### Offense Analysis

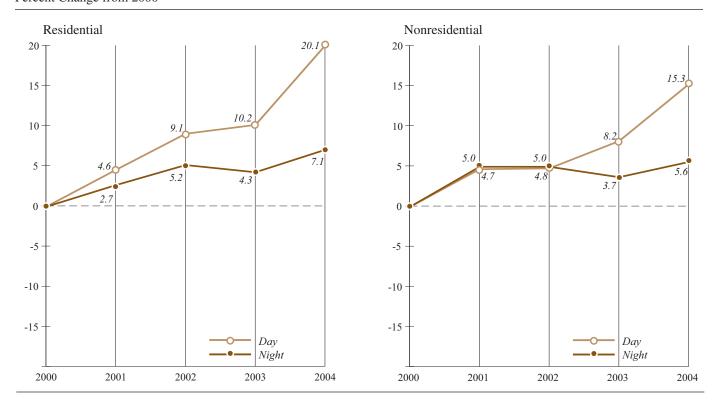

The UCR program requests that participating law enforcement agencies provide details regarding the nature of burglaries in their jurisdictions, such as type of entry, type of structure, time of day, and dollar loss associated with each offense.

An examination of data from agencies that provided burglary data for all 12 months of 2004 revealed that 61.4 percent of all burglaries involved forcible entry. Unlawful entry marked 32.4 percent of offenses, and attempted forcible entry accounted for 6.2 percent of burglaries reported to the Program in 2004. (See Table 19.)

As in the past, burglars targeted homes more often than nonresidential

Figure 2.11

**Burglary** Percent Change from 2000

structures. An analysis of data from agencies that provided supplemental burglary data for at least 6 months of 2004 showed that 65.7 percent of burglaries were of residences, and 34.3 were of nonresidential structures. (See Table 23.) Law enforcement agencies were unable to determine the time burglaries occurred in 25.3 percent of offenses. However, of the burglaries for which the time could be established. most (62.2 percent) residential burglaries occurred during the day, from 6 a.m. to 6 p.m. Nonresidential structures were targeted more often at night with 58.0 percent of these offenses occurring from 6 p.m. to 6 a.m. The average dollar loss per burglary offense was \$1,642. Losses from residential burglaries averaged \$1,607 per offense and losses from nonresidential burglaries averaged \$1,708 per offense. (See Table 23.)

### **Clearances**

The UCR Program considers an offense to be cleared when at least one person is arrested in connection with the offense, or law enforcement officials have identified the offender, but are unable to make an arrest because of circumstances beyond their control (e.g., the suspect is incarcerated or is in custody for another crime). This type of clearance is known as a clearance by exceptional means. (Section III furnishes more information about clearances.) The following paragraphs offer an overview of burglary clearances. The data are based on information from law enforcement agencies that provided at least 6 months of data for 2004.

In 2004, law enforcement agencies cleared 12.9 percent of the Nation's burglary offenses. By region, agencies

in the Northeast cleared the highest percentage (17.1 percent) of burglary offenses occurring within that region. In the South, agencies cleared 13.1 percent of burglary offenses, in the West, 11.8 percent, and in the Midwest, 11.2 percent. (See Table 26.)

By population group, agencies in cities collectively cleared 12.1 percent of burglary offenses. Agencies in the smallest cities, those with less than 10,000 in population, cleared the highest percentage (16.2 percent) of burglary offenses occurring in those jurisdictions. Agencies covering cities with 250,000 and over in population cleared the lowest percentage, 10.3 percent. The Nation's county law enforcement agencies cleared 14.5 percent of burglary offenses occurring in metropolitan counties, and 15.8 percent of those occurring in nonmetropolitan counties. (See Table 25.)

When grouped by classification and type, data showed that the highest percent (14.2 percent) of burglary clearances in the Nation were of offenses that involved unlawful entry of structures. Of the burglaries where force was used to enter structures, agencies cleared 12.2 percent of offenses, and of attempted burglary offenses, they cleared 10.6 percent. (See Table 27.)

#### Clearances and Juveniles

The UCR Program has established reporting guidelines that are unique to clearances involving juvenile offenders. First, law enforcement agencies may clear an offense by arrest even though no physical arrest may have occurred, e.g., when a juvenile is turned over to juvenile authorities. Second, when clearing a crime that involves both juvenile and adult offenders, law enforcement reports the clearance as an adult clearance.

Based on data from law enforcement agencies that provided at least 6 months of statistics to the UCR Program in 2004, arrests of juveniles accounted for 16.0 percent of burglary clearances. In the Nation's cities overall, clearances by juvenile arrests made up a slightly higher percentage, 16.1 percent. Clearances involving only juveniles accounted for 19.6 percent of the total number of burglary clearances in the Nation's smallest cities (those with fewer than 10,000 residents). The largest cities, those with 250,000 or more inhabitants, had the smallest percentage of clearances involving solely juveniles, 12.5 percent. Of the two county population groups, clearances involving only juveniles made up 15.9 percent of burglary clearances in metropolitan counties, and 15.5 percent in nonmetropolitan counties. (See Table 28.)

## Larceny-theft content revised 02/17/06

### **Definition**

The Uniform Crime Reporting (UCR) Program defines larceny-theft as the unlawful taking, carrying, leading, or riding away of property from the possession or constructive possession of another; attempts to do these acts are included in the definition. This crime category includes shoplifting, pocket-picking, purse-snatching, thefts from motor vehicles, thefts of motor vehicle parts and accessories, bicycle thefts, and so forth, in which no use of force, violence, or fraud occurs. Excluded from larcenytheft is motor vehicle theft, which is classified in a separate

offense category; also excluded are crimes that involve embezzlement, confidence games, forgery, and worthless checks—all of which are UCR Part II offenses.

### **Trend**

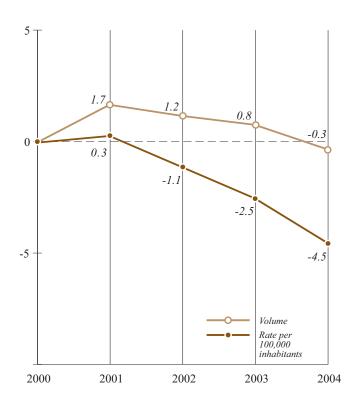

Year	Number of offenses	Rate per 100,000 inhabitants
2003	7,026,802	2,416.5
2004	6,947,685	2,365.9
Percent change	-1.1	-2.1

### **National Volume, Trends, and Rates**

In 2004, larceny-theft accounted for an estimated 67.3 percent of the Nation's property crimes. (See Table 1.) Trend data showed that the number of larceny-thefts decreased 1.1 percent from the 2003 estimate, a slight 0.3 percent from the 2000

## Figure 2.12

# **Larceny-theft**Percent Change from 2000

estimate, and 13.1 percent from the 1995 estimate.

Two-, 5-, and 10-year trend data also showed a decline in the frequency of larceny-theft per 100,000 inhabitants. With an estimated 6,947,685 occurrences of this offense in 2004, there were 2,365.9 larceny thefts per 100,000 inhabitants nationwide. This rate reflects declines of 2.1 percent from the 2003 estimate, 4.5 percent from the 2000 estimate, and 22.3 percent from the 1995 estimate. (See Tables 1 and 1A.)

## **Regional Offense Trends and Rates**

The UCR Program defines four regions within the United States: the Northeast, the Midwest, the South, and the West. (See Appendix III for a geographical description of each region.) A comparison of 2003 and 2004 data showed that both the estimated number and the estimated rate of larceny-theft offenses declined across all regions. (See Tables 3 and 4.) The following paragraphs provide a regional overview of larceny-theft.

### The Northeast

The region with the smallest proportion (18.6 percent) of the U.S. population in 2004, the Northeast experienced the fewest larceny-theft offenses nationwide: an estimated 13.1 percent. (See Table 3.) The estimated number of offenses (907,670) declined 0.6 percent compared with 2003 data, and the estimated rate of occurrences (1,663.3 per 100,000 inhabitants) declined 0.9 percent. (See Table 4.)

#### The Midwest

Accounting for 22.4 percent of the population in 2004, the Midwest had an estimated 21.7 percent of the Nation's

### **Table 2.26**

**Larceny-theft**Percent Distribution by Month, 2000-2004

Month	2000	2001	2002	2003	2004
January	7.6	7.7	8.1	7.9	7.9
February	7.3	6.8	7.0	6.7	7.1
March	8.2	7.8	7.8	8.1	8.3
April	7.9	8.0	8.1	8.3	8.2
May	8.6	8.6	8.6	8.7	8.5
June	8.8	8.6	8.5	8.6	8.7
July	9.2	9.1	9.2	9.2	9.0
August	9.2	9.1	9.1	9.0	8.9
September	8.5	8.4	8.6	8.6	8.4
October	8.8	9.1	8.9	8.8	8.8
November	8.0	8.3	8.0	8.0	8.1
December	7.9	8.4	8.1	8.2	8.1

larceny-thefts. (See Table 3.) The estimated number of offenses (1,507,171) declined 2.3 percent compared with 2003 data, and the estimated rate of occurrences (2,293.0 per 100,000 inhabitants) declined 2.8 percent. (See Table 4.)

#### The South

With more than one-third of the U.S. population (36.1 percent) in 2004, the South had the Nation's highest percentage of larceny-theft offenses: an estimated 41.3 percent. (See Table 3.) There were an estimated 2,870,994 offenses, which reflected a 0.8-percent decline from the 2003 estimate. The rate, estimated at 2,709.9 larceny-thefts per 100,000 inhabitants, decreased 2.1 percent from the 2003 estimated rate. (See Table 4.)

### The West

In 2004, an estimated 23.0 percent of the U.S. population lived in the West, which accounted for 23.9 percent of the Nation's larceny-theft offenses. (See Table 3.) Occurrences of this offense declined 0.9 percent from the 2003 data, down to an estimated 1,661,850 larceny-theft offenses. The rate, estimated at 2,465.3 larceny-thefts per 100,000 inhabitants, declined 2.3 percent. (See Table 4.)

## **Table 2.27**

**Larceny-theft**Percent Distribution by Region, 2004

Туре	United States total	Northeast	Midwest	South	West
Total <sup>1</sup>	100.0	100.0	100.0	100.0	100.0

All others	31.6	32.6	34.8	36.3	23.2

<sup>&</sup>lt;sup>1</sup> Because of rounding, the percentages may not add to 100.0.

## **Community Types**

The UCR Program aggregates crime data by three community types: Metropolitan Statistical Areas (MSAs), cities outside MSAs, and nonmetropolitan counties. By definition, an MSA has a principal city with at least 50,000 inhabitants. It includes the county that contains the principal city and adjacent counties that share a high degree of economic and social integration with the principal city and county as measured by commuting. Cities outside the MSAs are mostly incorporated areas, and nonmetropolitan counties are composed of unincorporated areas. (For additional information regarding community types, see Appendix III.)

In 2004, most of the Nation's population (an estimated 82.9 percent) lived in the MSAs, where an estimated 86.7 percent of the larceny-theft offenses occurred. Cities outside the MSAs (with 6.8 percent of the population) had 8.9 percent of the offenses, and nonmetropolitan counties (with 10.4 percent of the population) had an estimated 4.4 percent of the offenses. (Based on Table 2.)

# **Population Groups:** Trends and Rates

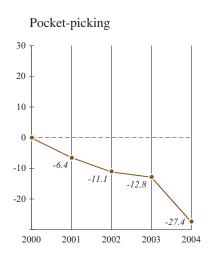

To calculate 2-year trend data for population groups, the UCR Program reviewed reports from all agencies that submitted statistics on larcenytheft offenses for at least 6 common months in 2003 and 2004. (For an explanation of population groups and the number of agencies contributing to the UCR Program, see Appendix III; for the methodology used in tabular presentations, see Appendix I.)

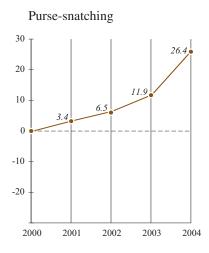

In cities collectively, occurrences of larceny-theft in 2004 declined 1.9 percent compared with 2003 data. Among the city groups, cities with populations of 250,000 and over had the

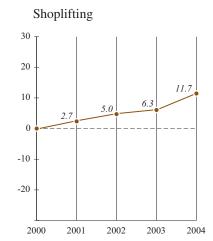

## Figure 2.13

## **Larceny-theft Categories**

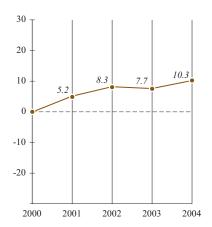

## Percent Change from 2000

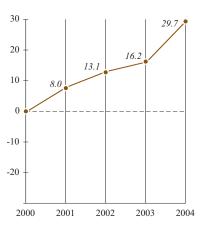

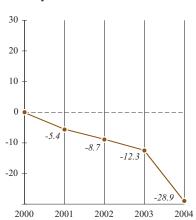

From motor vehicles (except accessories)

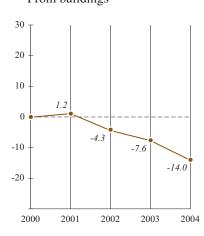

Motor vehicle accessories

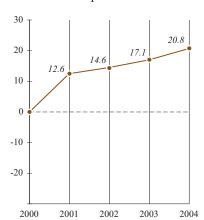

Bicycles

From buildings

From coin-operated machines

largest decrease (3.4 percent) in larcenytheft offenses compared with 2003 data; cities with populations of 10,000 to 24,999 had the smallest decrease (0.1 percent). In metropolitan counties, the decline was 0.7 percent, and in nonmetropolitan counties, 0.5 percent.

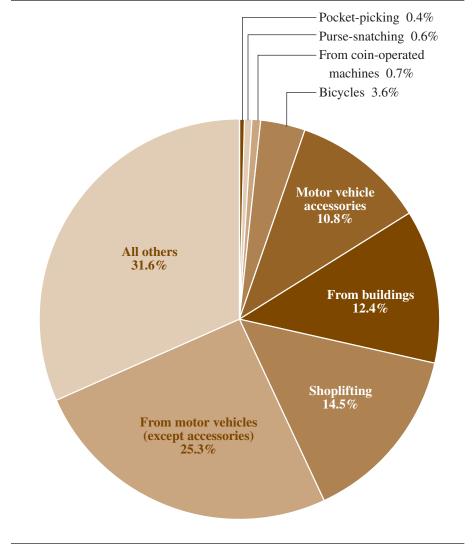

Based on reports of larceny-theft offenses from U.S. law enforcement agencies submitting 12 months of complete data for 2004, this offense occurred at a rate of 2,418.1 per 100,000

inhabitants nationwide. In cities collectively, the rate was 2,884.4 offenses per 100,000 inhabitants. Among the city population groups, cities with populations of 100,000 to 249,999 experienced the highest rate of larceny-theft: 3,218.7 offenses per 100,000 inhabitants. Cities with populations of 10,000 to 24,999 had the lowest rate: 2,519.3. In metropolitan counties, the estimated rate was 1,619.6; in nonmetropolitan counties, it was 1,030.6 offenses. (See Table 16.)

## Figure 2.14

## Larceny-theft

Percent Distribution, 1 2004

<sup>&</sup>lt;sup>1</sup>Due to rounding, the percentages may not add to 100.0.

### Offense Analysis

### Distribution

Thefts from motor vehicles accounted for the majority of offenses in the category of larceny-theft: 25.3 percent. Table 23 provides a further breakdown of larceny-theft offenses, including shoplifting, thefts from buildings, thefts of motor vehicle accessories, thefts of bicycles, thefts from coin-operated machines, purse-snatching, and pocket-picking. "All other," a category that includes the less-defined larceny-theft offenses, accounted for 31.6 percent of the total.

## Loss by Dollar Value

Larceny-theft offenses cost victims an estimated \$5.1 billion in lost property in 2004, up from \$4.9 billion in 2003. (Based on Tables 1 and 23.) The average value of property stolen was estimated at \$727 per offense, up 4.2 percent from the 2003 figure. The category with the highest average loss in dollar value was theft from buildings (\$1,106 per offense). Thefts from motor vehicles were valued at \$697 per offense; thefts of motor vehicle accessories, \$428; pursesnatching, \$416; pocket-picking, \$360; thefts from coin-operated machines, \$244; thefts of bicycles, \$240; and shoplifting, \$156.

Offenses in which the stolen property was valued at more than \$200 accounted for 39.1 percent of the crimes in the category of larceny-theft. Table 23 provides a further analysis, including the average dollar value per offense, of all offenses in the overall category of property crime.

### **Clearances**

In the UCR Program, an offense can be cleared either by arrest or by exceptional means, i.e., when conditions beyond the control of law enforcement prevent placing formal charges against the offender.

(For a further explanation of clearances, see Section III.) In 2004, law enforcement agencies across the Nation collectively cleared 18.3 percent of reported larceny-theft offenses.

Among the population groups, law enforcement in cities collectively cleared 18.4 percent of reported larceny-theft offenses. The highest percentage of larceny-theft offenses cleared (22.5 percent) occurred in cities with populations of 10,000 to 24,999. The lowest percentage of larceny-theft offenses cleared (14.7 percent) took place in cities with populations of 250,000 and over. Law enforcement agencies in metropolitan counties cleared 18.0 percent of offenses in this category, and those in nonmetropolitan counties cleared 17.7 percent. (See Table 25.)

An analysis of clearances by region shows that law enforcement agencies in the Northeast cleared the largest proportion of their larceny-theft offenses: 21.9 percent. Agencies in the South cleared 18.4 percent; in the Midwest, 17.9 percent; and in the West, 16.6 percent. (See Table 26.)

### Clearances and Juveniles

In certain circumstances involving juveniles, a law enforcement agency may report that an offense is cleared by arrest even when no physical arrest is made. This type of clearance must meet the following criteria: the offender is under the age of 18 and is cited to appear in juvenile court or before other juvenile authorities. When a clearance involves both adult and juvenile offenders, it is classified as an adult clearance.

In 2004, of the total number of larceny-theft offenses cleared nation-wide, 19.8 percent involved juveniles alone. In cities collectively, 20.6 percent of such clearances involved only juveniles. Law enforcement agencies in cities with populations of 50,000 to 99,999 reported the highest percentage of

clearances that involved solely juveniles, 23.0 percent. The lowest percentage of such clearances (17.0 percent) occurred in cities having a population of 250,000 and over.

In metropolitan counties, agencies reported that 16.7 percent of clearances for larceny-theft offenses involved only juveniles; in nonmetropolitan counties, 14.2 percent involved only juveniles. (See Table 28.)

## Motor Vehicle Theft content revised 02/17/06

### **Definition**

The Uniform Crime Reporting (UCR) Program defines motor vehicle theft as the theft or attempted theft of a motor vehicle. The offense includes the stealing of automobiles, trucks, buses, motorcycles, snowmobiles, etc. The taking of a motor vehicle for temporary use by persons having lawful access is excluded from this definition.

## **Trend**

		Rate per 100,000
Year	Number of offenses	inhabitants
2003	1,261,226	433.7
2004	1,237,114	421.3
Percent change	-1.9	-2.9

## National Volume, Trends, and Rates

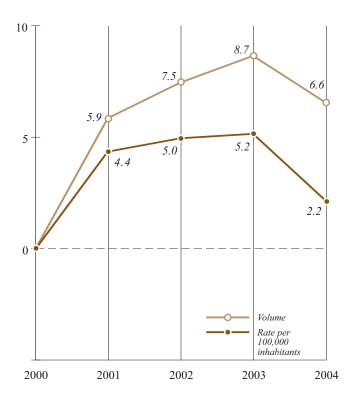

In 2004, there were an estimated 1,237,114 motor vehicle thefts in the Nation. Two-, 5-, and 10-year trend data showed considerable volatility: the number of motor vehicles estimated to have been stolen in 2004 decreased 1.9 percent from the 2003 estimate, increased 6.6 percent from the 2000 estimate, and decreased 16.0 percent from the 1995 estimate.

This volatility in trend data was also apparent in the estimations for rates. With 2004 as the base year, the rate of motor vehicle thefts was estimated at 421.3 motor vehicles stolen per 100,000 inhabitants. Changes at the 2-, 5-, and

## Figure 2.15

## Motor Vehicle Theft

Percent Change from 2000

10-year points showed that this 2004 rate decreased 2.9 percent from the 2003 estimate, increased 2.2 percent from the 2000 estimate, and decreased 24.8 percent from the 1995 estimate. (See Tables 1 and 1A.)

## Regional Offense Trends and Rates

In order to analyze crime by geographical area, the UCR Program divides the United States into four regions: the Northeast, the Midwest, the South, and the West. (Appendix III provides a map delineating the regions.) The following paragraphs furnish a regional overview of motor vehicle theft.

### The Northeast

The Northeast Region accounted for an estimated 18.6 percent of the Nation's population in 2004 and 11.6 percent of its motor vehicle thefts. (See Table 3.) An estimated 143,253 motor vehicle thefts occurred in the Northeastern states in 2004. This figure represented a 9.7-percent decrease compared with the previous year's estimate, and it was the largest decline among the regions. Estimated at a rate of 262.5 motor vehicle thefts per 100,000 inhabitants, the 2004 figure decreased 9.9 percent from the 2003 rate. (See Table 4.)

#### The Midwest

An estimated 22.4 percent of the country's population resided in the Midwestern states in 2004, and 18.1 percent of the Nation's motor vehicle thefts occurred in this region. (See Table 3.) The Midwest had an estimated 224,517 motor vehicle thefts in 2004. This number represented a 4.4-percent decrease in the previous year's volume. The rate, estimated at 341.6 motor vehicles stolen per 100,000 inhabitants, decreased 4.8 percent from the 2003 number. (See Table 4.)

### The South

The Nation's most populous region is the South, where an estimated 36.1 percent of the U.S. population resided in 2004. This region accounted for over one-third (34.1 percent) of the Nation's

### **Table 2.28**

# **Motor Vehicle Theft**Percent Distribution by Month, 2000-2004

Month	2000	2001	2002	2003	2004
January	8.1	8.1	8.6	8.3	8.6
February	7.4	6.9	7.2	7.0	7.5
March	8.0	7.7	8.0	8.0	8.2
April	7.6	7.6	7.8	8.1	7.9
May	8.2	8.0	8.1	8.2	8.3
June	8.3	8.2	8.1	8.2	8.4
July	8.9	9.0	9.0	8.8	8.7
August	9.1	8.9	8.8	8.8	8.7
September	8.5	8.5	8.6	8.6	8.2
October	8.7	9.3	8.8	8.8	8.7
November	8.5	8.9	8.4	8.3	8.4
December	8.6	9.0	8.6	8.8	8.5

### **Table 2.29**

# Motor Vehicle Theft Percent Distribution by Region, 2004

Region	Total <sup>1</sup>	Autos	Trucks and buses	Other vehicles
Total	100.0	72.8	18.4	8.7
Northeast	100.0	88.3	5.3	6.5
Midwest	100.0	76.2	15.0	8.8
South	100.0	67.2	21.2	11.5
West	100.0	72.3	20.8	6.9

Because of rounding, the percentages may not add to 100.0.

motor vehicle thefts. (See Table 3.) The estimated 421,414 motor vehicle thefts in the South decreased 2.9 percent from the 2003 estimate. It is estimated that motor vehicles in the South were stolen at a rate of 397.8 offenses per 100,000 population. The 2004 rate decreased 4.2 percent when compared with the 2003 rate. (See Table 4.)

### The West

With approximately 23.0 percent of the U.S. population, the Western states accounted for 36.2 percent of all motor vehicle thefts in the Nation in 2004. (See Table 3.) By volume, the largest number of motor vehicle thefts, an estimated 447,930, occurred in this region. The only region to show an increase, the estimated number of motor vehicle thefts went up 3.2 percent from last year's number. Also on the rise from the 2003 number was the rate, estimated at 664.5 offenses per 100,000, an increase of 1.7 percent. (See Table 4.)

## **Community Types**

The UCR Program aggregates data by three community types: Metropolitan Statistical Areas (MSAs), cities outside metropolitan areas, and nonmetropolitan counties. MSAs are areas that include a principal city or urbanized area with at least 50,000 inhabitants and the county that contains the principal city and other adjacent counties that have, as defined by the Office of Management and Budget, a high degree of economic and social integration.

The vast majority (82.9 percent) of the U.S. population resided in MSAs during 2004, where approximately 93.5 percent of motor vehicle thefts occurred. For 2004, the UCR Program estimated an overall rate of 475.7 motor vehicles stolen per 100,000 MSA inhabitants. Cities outside MSAs and nonmetropolitan counties, comprised 6.8 and

10.4 percent of the Nation's population, respectively. The former accounted for 3.2 percent of motor vehicle thefts and the latter 3.3 percent. The Program estimated a rate of 198.0 motor vehicles stolen for every 100,000 persons inhabiting cities outside MSAs and a rate of 132.7 motor vehicles stolen per 100,000 inhabitants of nonmetropolitan counties. (Based on Table 2.)

# Population Groups: Trends and Rates

The national UCR Program aggregates data by various population groups, which include cities, metropolitan counties, and nonmetropolitan counties. A definition of these groups can be found in Appendix III. In cities collectively, the number of motor vehicle thefts decreased 2.9 percent in 2004 compared with the previous year's data. From 2003 to 2004, the number of motor vehicle thefts reported by law enforcement in all city population groups decreased. The Nation's largest cities, those with populations of 250,000 and over, experienced the greatest decline-4.0 percent; cities with populations of 25,000–49,999 experienced the smallest decline—0.7 percent. Within metropolitan and nonmetropolitan counties, however, the number showed a slight increase, +0.3 percent and +0.2 percent respectively. (See Table 12.)

Among the population groups, in 2004 cities overall had a motor vehicle theft rate of 534.2 per 100,000 inhabitants. The largest cities, those with 250,000 and over in population, experienced the highest rate of motor vehicle thefts with 873.5 thefts per 100,000 inhabitants. Conversely, the Nation's smallest cities, those with populations under 10,000, had the lowest rate of motor vehicle theft with 217.2 per 100,000 in population. Within the county groups, metropolitan counties

had a rate of 304.6 motor vehicles stolen per 100,000 inhabitants and nonmetropolitan counties, a rate of 138.9 per 100,000 persons. (See Table 16.)

## **Offense Analysis**

Based on law enforcement agencies' reports, the UCR Program estimated the combined value of motor vehicles stolen nationwide in 2004 at approximately \$7.6 billion. (Based on Tables 1 and 23.) Automobiles were, by far, the most frequently stolen vehicle type—accounting for 72.8 percent of all vehicles stolen. Trucks and buses accounted for 18.4 percent, and other vehicles accounted for 8.7 percent. (Based on Table 19.)

By type of vehicle, automobiles were stolen at a rate of 320.5 cars per 100,000 in population in 2004. Trucks and buses were stolen at a rate of 81.1 vehicles per 100,000 in population, and other types of vehicles were stolen at a rate of 38.4 vehicles per 100,000 people. (See Table 19.)

#### **Clearances**

In the UCR Program, law enforcement may clear offenses either by arrest or by exceptional means, i.e., when elements beyond the control of law enforcement prevent the placing of formal charges against the offender. (Section III provides more information regarding clearances.) In 2004, law enforcement agencies in the United States, collectively. cleared 13.0 percent of motor vehicle theft offenses. Law enforcement in cities cleared 12.0 percent of motor vehicle thefts. Among the Nation's population groups labeled city, law enforcement in cities with populations of fewer than 10,000 inhabitants cleared the largest proportion of motor vehicle thefts (24.6 percent) reported in their jurisdictions. Law enforcement in the Nation's largest cities, those with 250,000 and over in population, cleared the smallest proportion of motor vehicle thefts (9.4 percent) reported to them. Law enforcement agencies in metropolitan counties cleared 15.4 percent of motor vehicle thefts in their jurisdictions, and nonmetropolitan counties cleared 26.0 percent of motor vehicle thefts. (Table 25.)

Regionally, law enforcement agencies in the South cleared the highest percentage of motor vehicle thefts (15.0 percent, collectively) within their jurisdictions. Law enforcement agencies in the Northeast cleared 14.7 percent; agencies in the Midwest, 14.0 percent; and agencies in the West, 10.2 percent of motor vehicle thefts. (See Table 26.)

## Clearances and Juveniles

Before analyzing data involving clearances and juveniles, the data user should consider two important pieces of information. First, when an offender under the age of 18 is cited to appear before juvenile authorities, the UCR Program considers the offense to be cleared by arrest, even though a physical arrest may not have occurred. Second, clearances involving both adult and juvenile offenders are classified as adult clearances. For more information on clearances, see Section III, Offenses Cleared.

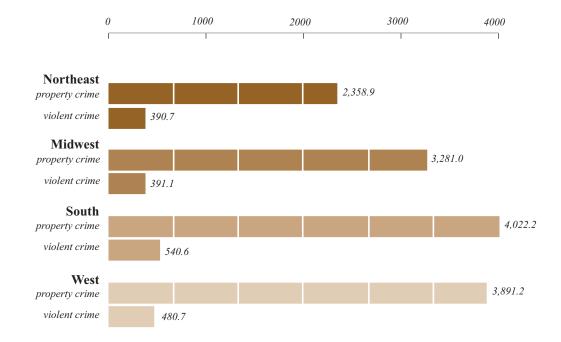

Nationwide, 16.4 percent of all clearances of motor vehicle thefts in 2004 involved juveniles only. In cities collectively, 16.7 percent of all clearances of motor vehicle thefts involved only persons under 18 years of age. Within the city population groups, law enforcement agencies in cities with populations of 50,000 to 99,999 reported the highest percentage of clearances (17.5 percent) for motor vehicle thefts that involved only juveniles. The lowest per-

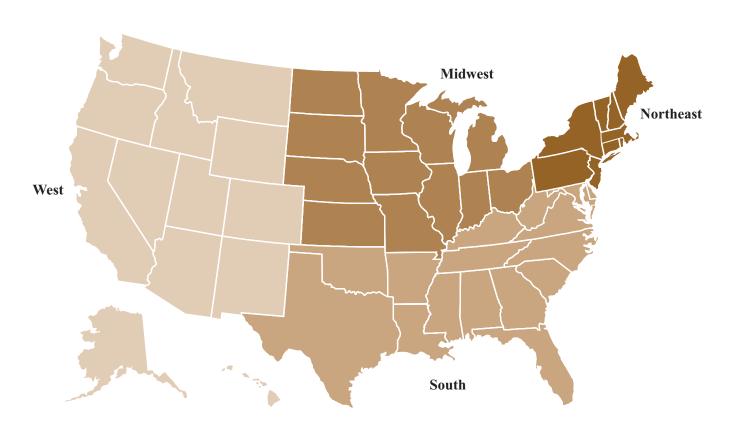

centage of clearances for motor vehicle thefts involving juveniles (15.5 percent) was reported by law enforcement in both cities with 100,000 to 249,999 in population and in the Nation's smallest cities, those with under 10,000 inhabitants. Law enforcement agencies in metropolitan counties reported that 15.2 percent of motor vehicle theft clearances within their jurisdictions involved juveniles only. Agencies in nonmetropolitan counties reported that juveniles only comprised 16.2 percent of their total clearances for motor vehicle theft. (See Table 28.)

## Figure 2.16

## **Regional Crime Rates 2004**

Violent and Property Crimes per 100,000 Inhabitants

## Arson content revised 02/17/06

#### **Definition**

The Uniform Crime Reporting (UCR) Program defines arson as any willful or malicious burning or attempting to burn, with or without intent to defraud, a dwelling house, public building, motor vehicle or aircraft, personal property of another, etc.

# Offense Methodology and Tabular Presentation

According to the UCR Program's guidelines, only fires that law enforcement investigation determined to have been willfully or maliciously set may be classified as arson. Participating agencies do not report fires of suspicious or unknown origin. Data users should consider several points regarding arson statistics:

 The UCR Program staff does not include arson data in the national offense rates. Rates are computed separately based upon arson data received from all law enforcement agencies that provide data for 12

### **Table 2.30**

#### **Arson Rate**

by Population Group, 2004 [10,142 agencies; 2004 estimated population 215,865,707; rate per 100,000 inhabitants]

Population group	Rate
Total	28.2
Total cities	31.2
Group I (cities 250,000 and over)	48.8
(cities 1,000,000 and over)	42.7
(cities 500,000 to 999,999)	52.2
(cities 250,000 to 499,999)	52.9
Group II (cities 100,000 to 249,999)	30.1
Group III (cities 50,000 to 99,999)	26.0
Group IV (cities 25,000 to 49,999)	22.9
Group V (cities 10,000 to 24,999)	18.9
Group VI (cities under 10,000)	22.3
Metropolitan counties	24.1
Nonmetropolitan counties	17.1
Suburban area <sup>1</sup>	21.9

<sup>&</sup>lt;sup>1</sup> Suburban area includes law enforcement agencies in cities with less than 50,000 inhabitants and county law enforcement agencies that are within a Metropolitan Statistical Area (see Appendix III). Suburban area excludes all metropolitan agencies associated with a principal city. The agencies associated with suburban areas also appear in other groups within this table.

- complete months. Data concerning the rate of arson per 100,000 inhabitants is presented in Table 2.30.
- Because of fluctuations in law enforcement agencies' reporting of arson offenses, the FBI does not estimate for arson offenses. Therefore, arson offenses are excluded from Tables 1-7, all of which contain offense estimations.

However, the UCR Program presents the number of arsons reported by individual law enforcement agencies (Tables 8-11), trend data (Tables 12-15), and arson clearance data (Table 2.31 and Tables 25-28). Appendix I of this publication contains more information about the methodology of individual tables.

#### **National Coverage**

In 2004, 13,286 agencies (providing 1 to 12 months of data) reported 68,245 arson offenses. Supplemental data, such as the type of structure burned and the estimated dollar loss, were received for 63,215 arsons. (See Table 2.31.) The Program received 12 complete months of arson data from 10,142 agencies representing 73.5 percent of the U.S. population. (See Table 2.30.)

# Population Groups: Trends and Rates

The UCR Program aggregates data into population groups; six of these population groups have the *city* label (based on the number of inhabitants), and two have the *county* label. Appendix III contains

more information about the individual population groups.

#### **Trends**

The number of arsons reported in 2004 fell 6.4 percent when compared with 2003 data. Law enforcement agencies in the Nation's cities collectively reported a 6.8-percent decline in the number of arsons from the 2003 figure. Among the population groups labeled city, those with 100,000 to 249,999 inhabitants had the largest year-to-year decrease in reported arsons, 11.1 percent; cities with populations of less than 10,000 had the smallest decrease in reported arsons, 0.5 percent. Agencies in the Nation's metropolitan counties had a 5.8-percent decrease in the number of arsons; and those in nonmetropolitan counties, a 3.5-percent decline. (See Table 12.)

#### Rates

Arson rates were based on information received from 10,142 agencies that provided 12 months of complete arson data to the UCR Program. An examination of data from those agencies indicated that in 2004, the highest rate—48.8 arsons per 100,000 inhabitants—was reported in the Nation's largest cities, those with 250,000 or more inhabitants. Cities with 10,000 to 24,999 residents had the lowest arson rate, 18.9 per 100,000 in population. Metropolitan counties had 24.1 arsons per 100,000 inhabitants, and nonmetropolitan counties had 17.1 arsons per 100,000 inhabitants, the lowest of all the population groups. (See Table 2.30.)

Arson

by Type of Property, 2004

[13,205 agencies; 2004 estimated population 233,208,779]

Property classification	Humber of offens	es Percent distribut	percent not in	nserage damage	Total clean	percent of percent of	percent of nees under 18

Other	15,925	25.2		1,705	3,206	20.1	53.5

<sup>&</sup>lt;sup>1</sup> Because of rounding, the percentages may not add to 100.0.

#### Offense Analysis

The UCR Program breaks down arson offenses into three property categories: structural, mobile, and other. In addition, the structural property type is comprised of seven types of structures, and the mobile property type consists of two subgroupings. The Program also collects information on the estimated dollar value of the damaged property.

#### Property Type

The number of arsons decreased for all three property types in 2004 compared with the 2003 number, particularly for the mobile type, which dropped 13.1 percent from the prior year's figure. Arsons of structural property decreased 3.9 percent, and arsons of other property types declined 2.9 percent. (See Table 15.)

#### Distributions by Property Type

In 2004, arsons of structures accounted for 44.6 percent of all arsons. Of those, 62.2 percent involved residential properties. Of the residential arsons, most (72.8 percent) were single-occupancy

residences such as houses, townhouses, duplexes, etc. Mobile arsons accounted for 30.2 percent of all arsons. Within this category, 94.7 percent of the offenses involved the burning of motor vehicles. Other types of property, such as crops, timber, fences, etc., comprised 25.2 percent of reported arson offenses. (See Table 2.31.)

#### Dollar Loss

In monetary terms, the average dollar loss in 2004 for an arson was \$12,017. The average dollar loss for a structural arson was \$22,071. Mobile property had an average dollar loss of \$6,382. Other property types had an average dollar loss of \$1,705. (See Table 2.31.)

Within the structural arson category, the industrial/manufacturing subcategory had the highest average dollar loss at \$92,201. Within that same category, single-occupancy dwellings had an average dollar loss of \$21,819. Other residential dwellings had an average dollar loss of \$21,959. (See Table 2.31.)

#### **Clearances**

In the UCR Program, law enforcement agencies may clear an offense by the arrest of at least one person or by exceptional means. An agency may clear an offense by exceptional means if some force outside the agency's control prohibits the arrest of the individual. Section III provides additional information regarding clearances by exceptional means.

Overall in 2004, law enforcement agencies cleared 17.1 percent of arson offenses by arrest or exceptional means. Among the four regions by which the UCR Program aggregates clearance data, law enforcement agencies in the Northeast cleared the highest percentage of arson offenses, 21.5 percent, occurring in that region. Agencies in the South cleared 18.8 percent of arsons by arrest or exceptional means. Fifteen percent of arson offenses (the lowest percentage) were cleared in the Midwest as well as in the West. (See Table 26.)

<sup>&</sup>lt;sup>2</sup> Includes offenses cleared by arrest or exceptional means.

An examination of the data collected about arson clearances by population groups indicated that law enforcement agencies in the Nation's smallest cities (under 10,000 in population) and in non-metropolitan counties cleared the highest percentage of their arsons, 26.7 and 24.3 percent, respectively. The largest cities (250,000 and over in population) and metropolitan counties cleared their reported arsons at 10.0 and 17.8 percent, respectively. (See Table 25.)

#### Clearances by Property Type

A review of the 2004 data from 13,205 agencies that provided supplemental information concerning arsons showed that 21.2 percent of structural arson offenses were cleared by arrest or exceptional means. Slightly more than 7 percent (7.1) of mobile arson offenses and 20.1 percent of other arson crimes were cleared by arrest or exceptional means. (See Table 2.31.)

#### Clearances and Juveniles

Juvenile clearances are reported when a person under the age of 18 is cited to appear in a juvenile court or is turned over to another juvenile authority; it is not necessary for an arrest actually to occur. According to the UCR Program's definitions, when a law enforcement agency clears a crime involving both juveniles and adults, the agency classifies the action as an adult clearance. A juvenile clearance is recorded only when the crime involves only juveniles.

During 2004, clearances of juveniles for the offense of arson were proportionally higher than for any other crime. Nearly 43 percent (42.7) of arson clearances nationwide involved only juveniles. A breakdown of the data by population groups showed that among the Nation's cities, collectively, juvenile clearances accounted for 46.9 percent of all arson clearances. Of all the popula-

tion groups, cities with populations of 100,000 to 249,999 inhabitants had the highest percentage of their arson clearances involving only juveniles, 51.5 percent. Agencies in nonmetropolitan counties had the lowest percentage of their arson clearances involving only juveniles, 26.1 percent. In the country's metropolitan counties, 35.5 percent of arson clearances involved only juveniles. (See Table 28.)

#### Juvenile Clearances by Property Type

Of the clearances for structural arsons, 40.2 percent involved only juveniles. Of those, the majority (76.3 percent) involved community or public buildings such as churches, jails, schools, etc. Twenty-one percent of clearances for mobile arsons and 53.5 percent of other property type arsons involved only juveniles. (See Table 2.31.)

## **Hate Crime**

#### **Definition**

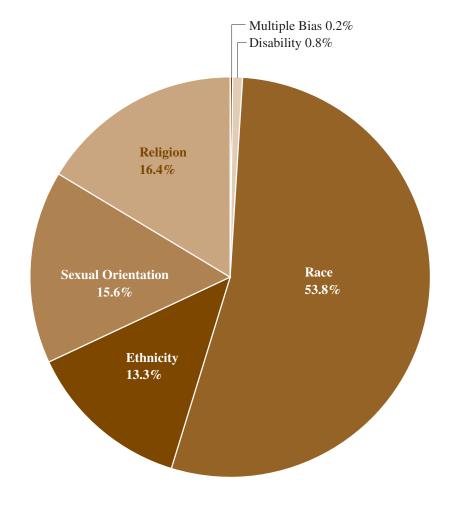

A hate crime, also known as a bias crime, is a criminal offense committed against a person, property, or society that is motivated, in whole or in part, by the offender's bias against a race, religion, disability, sexual orientation, or ethnicity/national origin.

#### **Background**

In response to mounting national concern over crimes motivated by bias, Congress enacted the Hate Crime Statistics Act of 1990. The law directed the Attorney General to collect data "about crimes that manifest evidence of prejudice based on race, religion, sexual orientation, or ethnicity." The Attorney General delegated the responsibility for developing and implementing a hate crime data collection program

Figure 2.17

Bias-motivated Offenses
Percent Distribution, 1 2004

to the Director of the FBI, who assigned the task to the Uniform Crime Reporting (UCR) Program. In September 1994, Congress passed the Violent Crime Control and Law Enforcement Act, which amended the Hate Crime Statistics Act to include both physical and mental disabilities. The UCR Program began collecting statistics on offenses motivated by bias against physical and mental disabilities in January 1997. The Church Arson Act of 1996 mandated that hate crime data collection become a permanent part of the UCR Program.

Those who developed the guidelines for hate crime data collection recognized that hate crimes are not separate, distinct crimes; instead, they are traditional offenses motivated by the offender's bias. After much consideration, the developers decided that hate crime data could be derived by capturing the additional element of bias in those offenses already being reported to the UCR Program. Attaching the collection of hate crime statistics to the established UCR data collection procedures, they concluded, would fulfill the directives of the Hate Crime Statistics Act without placing an undue additional reporting burden on law enforcement and, in time, would develop a substantial body of data about the nature and frequency of bias crimes occurring throughout the Nation. As a result, the law enforcement agencies that participate in the national hate crime program collect details about an offender's bias motivation associated with the following offense types:

<sup>&</sup>lt;sup>1</sup>Due to rounding, the percentages may not add to 100.0.

#### **Table 2.32**

## **Incidents, Offenses, Victims, and Known Offenders** by Bias Motivation, 2004

Bias motivation	Incidents	Offenses	Victims <sup>1</sup>	Known offenders <sup>2</sup>
Total	7,649	9,035	9,528	7,145

Other <sup>4</sup>	35	35	37	38
Crimes against society <sup>4</sup>	60	60	60	75

<sup>&</sup>lt;sup>1</sup>The actual number of incidents is 7,649. However, the column figures will not add to the total because incidents may include more than one offense type, and these are counted in each appropriate offense type category.

murder and nonnegligent manslaughter, forcible rape, aggravated assault, simple assault, intimidation, robbery, burglary, larceny-theft, motor vehicle theft, arson, and destruction/damage/vandalism of property. The law enforcement agencies participating in the National Incident-Based Reporting System also collect data on additional bias-motivated crimes against persons or crimes against property (e.g., fraud) and publishes these crimes as Other.

An abstract based on the information received from law enforcement agencies that provided 1 to 12 months of hate crime reports during 2004 follows. More detailed information concerning the characteristics of hate crime can be found in the UCR Program's annual publication *Hate Crime Statistics*.

#### **Participation**

The UCR Program published the first national hate crime data in 1992 with participation from 6,200 law enforcement agencies. Since then, the hate crime data collection program has been marked by a slow but steady increase in participation. A total of 12,711 law enforcement agencies took part in the national hate crime program during 2004. This number represents a 6.7percent increase in agency participation from 2003. Of those agencies that participated, 2,046 (16.1 percent) reported hate crime incidents. (See Table 2.35.) By way of comparison, 11,909 agencies participated in the program in 2003, and 1,967 (16.5 percent) contributed hate crime incident reports.

### **Law Enforcement Reports**

The national UCR Program views each hate crime as an incident, which may have multiple offenses, victims, and offenders. When aggregating the number of hate crime offenses committed

<sup>&</sup>lt;sup>2</sup>The term *known offender* does not imply that the identity of the suspect is known, but only that an attribute of the suspect has been identified, which distinguishes him/her from an unknown offender.

<sup>&</sup>lt;sup>3</sup>A *multiple-bias incident* occurs only when two or more offense types are committed in a single incident. In a situation where there is more than one offense type, the agency can indicate a different bias motivation for each offense type. In the case of a single offense type, only one bias motivation can be indicated.

<sup>&</sup>lt;sup>2</sup>The term *victim* may refer to a person, business, institution, or society as a whole.

<sup>&</sup>lt;sup>3</sup>The term *known offender* does not imply that the identity of the suspect is known, but only that an attribute of the suspect has been identified, which distinguishes him/her from an unknown offender. The actual number of known offenders is 7,145. However, the column figures will not add to the total because some offenders are responsible for more than one offense type, and they are, therefore, counted more than once in this table.

<sup>&</sup>lt;sup>4</sup>Includes additional offenses collected in the NIBRS.

against individuals, the UCR Program counts one offense for each victim. The offense types of murder, forcible rape, aggravated assault, simple assault, and intimidation are crimes against persons. When counting crimes against property, the UCR Program allots one offense for each distinct incident regardless of the number of victims. Robbery, burglary, larceny-theft, motor vehicle theft, arson, and destruction/damage/vandalism comprise the offense types that the Program considers crimes against property.

For 2004, the hate crime program tallied 7,649 bias-motivated incidents involving 9,035 offenses directed at 9,528 victims. The offenses were committed by 7,145 known offenders.

#### **Incidents**

The great majority of hate crime incidents involve a single bias, although the hate crime program accepts reports of multiple-bias incidents. By definition, a multiple-bias incident is one in which two or more offense types were motivated by two or more bias types. Of the 7,649 incidents reported by law enforcement agencies in 2004, 7 were multiple-bias incidents. (See Table 2.32.)

Law enforcement investigators found that racial prejudice motivated more than half of all the reported singlebias incidents (52.9 percent). They

#### **Table 2.34**

## Known Offenders<sup>1</sup> Known Offender's Race, 2004

Total	7,145
White	4,327
Black	1,408
American Indian/Alaskan Native	48
Asian/Pacific Islander	70
Multiple Races, Group <sup>2</sup>	367
Unknown Race	925

<sup>&</sup>lt;sup>1</sup>The term *known offender* does not imply that the identity of the suspect is known, but only that an attribute of the suspect has been identified, which distinguishes him/her from an unknown offender.

attributed 18.0 percent of the incidents to a religious bias, 15.7 percent to a sexual-orientation bias, and 12.7 percent to an ethnicity/national origin bias. The remaining incidents were ascribed to a disability bias. (Based on Table 2.32.)

#### Offenses

In the hate crime program, bias-motivated offenses can be directed at persons, property, or society. During 2004, law enforcement agencies identified 9,035 offenses within the reported 7,649 incidents. Of these offenses, 62.4 percent were directed against persons, 36.9 percent against property, and the remainder (0.7 percent) against society.

<sup>&</sup>lt;sup>2</sup>The term *multiple races, group* is used to describe a group of offenders comprised of individuals of varying races

Approximately one-half of all bias-motivated offenses against persons involved the crime of intimidation (50.1 percent). Nearly all of the other offenses directed at persons involved assaults: simple assaults made up 31.0 percent and aggravated assaults accounted for 18.4 percent of the offenses.

The majority of hate motivated offenses directed against property (84.4 percent) involved destruction, damage, or vandalism.

An analysis of the total reported offenses showed that intimidation accounted for 31.3 percent of the 9,035 offenses; destruction/damage/vandalism, 31.1 percent; simple assault, 19.4 percent; and aggravated assault, 11.5 percent of the total offenses. (Based on Table 2.33.)

#### **Victims**

Of the 9,528 victims of hate crimes in 2004, 9,514 were associated with an incident involving a single bias. More than half of that number (53.8 percent) were victims of racial prejudice. Of those, 67.9 percent were victimized because of anti-black attitudes, and 20.1 percent were targets of anti-white sentiments.

Victims of religious intolerance made up 16.7 percent of the victims of incidents involving a single bias. Of those, 67.8 percent were victims of anti-Jewish bias, and 12.7 percent were targets of anti-Islamic bias.

Of the total number of victims of single-bias incidents, 15.6 percent were attacked because of a sexual-orientation bias. The majority of those victims, 60.9

percent, were the objects of anti-male homosexual attitudes on the part of the offenders.

Approximately 13 percent (13.2) of the victims in single-bias incidents were targeted because of the offenders' ethnicity/national orientation bias. Of those, 51.5 percent were marked because of the perpetrators' anti-Hispanic views. (Based on Table 2.32.)

Less than 1 percent of the total victims of crimes motivated by a single bias were targets of an anti-disability bias. Of the 73 victims of this type of bias, 49 were the subjects of a bias against a mental disability.

Fourteen of the total 9,528 victims of hate crimes were the objects of multiple biases on the part of the offenders. (See Table 2.32.)

#### **Offenders**

The hate crime incident reports for 2004 contained a total of 7,145 known offenders. The term *known offender* does not imply that the identity of the perpetrator was known but only that a distinguishing attribute of the individual, race, was noted on the incident report.

Of those persons who committed a crime based upon their perceived biases, 60.6 percent were white, and 19.7 percent were black. Nearly 13 percent (12.9) were classified as unknown race. Groups containing persons of various races accounted for 5.1 percent of the perpetrators, and the remainder were American Indian/Alaskan Natives or Asian/Pacific Islanders. (Based on Table 2.34.)

## Offense Tabulations: A Summary of the Tables in this Section

The data in the tables of Section II—Offenses Reported are organized in several ways. First, the data are categorized for the Nation as a whole, then by geographic divisions; individual states; Metropolitan Statistical Areas (MSAs); and cities, towns, and counties. Appendix III of this publication provides a comprehensive explanation of the UCR Program's definitions of areas.

#### **Crime Volume and Rate**

The data are presented in the tables of this section as crime volume and/or crime rate (occurrence per 100,000 U.S. inhabitants). The exact number of crimes occurring within the United States is unknown. In Tables 1 through 7 of this book, the UCR Program provides estimates based upon the number of offenses that are known to law enforcement and, using these estimates, computes crime rates for each 100,000 in population. The Program uses current, resident population counts in computing crimes rates. The reader should be aware that

all communities are affected to some degree by seasonal or transient population changes, and the Program's crime rates do not account for these short-term variations. In addition, the reader should remember that many factors influence the amount and type of crime occurring from place to place, and shifting variables may cause crime to vary from time to time within the same place. Other factors contributing to the level of crime in a given area are discussed in Crime Factors, (page v).

# National Data: An Important Instrument for Crime Analysis

One tool that law enforcement administrators and others can use in analyzing the volume of local crime and the performance of the law enforcement agencies is national data. That analysis, however, should not end with a comparison based solely on data presented in this publication. Only by analysis that considers the numerous unique factors that shape local crime can one make a true assessment of a community's crime problem or the effectiveness of law enforcement operations.

#### A Brief Description of the Tables' Contents

An in-depth discussion of table construction methodology can be found in Appendix I of this publication. The following summarizes the contents of the tables contained in this Section.

- **Table 1**—20-year table that presents national estimates of the volumes and rates per 100,000 inhabitants for the Part I offenses. Table 1A presents percent changes in volume and rate for 2 years, 5 years, and 10 years.
- Table 2—estimated crime volumes and rates for 2004 for the Nation as a whole and for the Nation broken down by community type: MSAs, nonmetropolitan counties, and cities and towns outside metropolitan areas. Definitions of these community types can be found in Appendix III.
- Table 3—data showing the regional distribution of estimated number of Part I crimes and population estimates. A map of the United States illustrating the regions and divisions employed by the UCR Program appears in Appendix III.
- Table 4—a percent change (2003-2004) in the volume and rate estimates by region, geographic division, and state.

- Table 5—estimated volume and rate of Part I offenses for each state by community type.
- Table 6—estimated offense volume and rate for Part I crimes for each individual MSA.
- **Table 7**—breakdowns for the offenses of robbery (by location), burglary (by time of day), and larceny-theft (by type) over the past 5 years.
- **Table 8**—offenses known to police for cities over 10,000 in population.
- Table 9—number of offenses occurring on college and university campuses as reported to the UCR Program by
  college and university law enforcement agencies. The UCR Program does not assign population to educational
  institutions, but does provide student enrollment information when available.
- Table 10—offenses reported by metropolitan and nonmetropolitan county law enforcement agencies.
- Table 11—offenses reported by state law enforcement agencies, including state police, and federal agencies.
- Tables 12 through 19—crime trends for volumes and rates by population groupings. The UCR Program's definition of the population groups can be found in Appendix III.
- Tables 20 through 22—data concerning weapons used in the violent crimes of murder, robbery, and aggravated assault.
- Table 23—analysis of the value of property lost through the crimes of robbery, burglary, motor vehicle theft, and larceny-theft. This table provides a percent change (2003-2004) in offense volume, percent distribution of offense breakdowns, and the average value of property lost.
- **Table 24**—breakdowns by type and value of property stolen and recovered.

### **A Note concerning Arson**

Because of the limited reporting of arson offenses by law enforcement agencies, the UCR Program does not estimate for arson; therefore, arson offenses are not included in the estimated offense tables (Tables 1-7). However, arson offenses reported by individual law enforcement agencies are displayed in Tables 8–11. Two-year arson trends are shown in Tables 12–15.

### **Advisory**

Information regarding the UCR Program's statistical methodology and table construction can be found in Appendix I.

Table 1

by Volume and Rate per 100,000 Inhabitants, 1985-2004

<sup>&</sup>lt;sup>1</sup> Populations are U.S. Census Bureau provisional estimates as of July 1 for each year except 1990 and 2000, which are decennial census counts.

NOTE: Although arson data are included in the trend and clearance tables, sufficient data are not available to estimate totals for this offense.

Table 1A

#### Crime in the United States

Percent Change in Volume and Rate per 100,000 Inhabitants for 2 years, 5 years, and 10 years

Years	Violent crime	Violent crime rate	Murder and nonnegligent manslaughter	Murder and nonnegligent manslaughter rate	Forcible rape	Forcible rape rate	Robbery	Robbery rate	Aggravated assault	Aggravated assault rate
2004/2003	-1.2	-2.2	-2.4	-3.3	+0.8	-0.2	-3.1	-4.1	-0.5	-1.5
2004/2000	-4.1	-8.1	+3.5	-0.8	+4.9	+0.6	-1.6	-5.7	-6.2	-10.1
2004/1995	-24.0	-32.0	-25.3	-33.2	-2.9	-13.1	-30.9	-38.1	-22.2	-30.4

<sup>&</sup>lt;sup>2</sup> The murder and nonnegligent homicides that occurred as a result of the events of September 11, 2001, are not included in this table.

<sup>&</sup>lt;sup>3</sup> The 2003 crime figures have been adjusted.

Property crime			Burglary rate	Larceny- theft	Larceny- theft rate	Motor vehicle theft	Motor vehicle theft rate
11,102,590	4,666.4	3,073,348	1,291.7	6,926,380	2,911.2	1,102,862	463.5

<sup>&</sup>lt;sup>1</sup> Populations are U.S. Census Bureau provisional estimates as of July 1, 2004.

Topulations are C.S. Celtus Bureau provisional estimates as of May 1, 2004.

The percentage reported under "Area actually reporting" is based upon the population covered by agencies providing 3 months or more of crime reports to the FBI.

NOTE: Although arson data are included in the trend and clearance tables, sufficient data are not available to estimate totals for this offense. Therefore, no arson data are published in this table.

Table 3

Offense and Population Distribution by Region, 2004

Region	Population	Violent crime	Murder and non- negligent man- slaughter	Forcible rape	Robbery	Aggravated assault	Property crime	Burglary	Larceny- theft	Motor vehicle theft
United States Total <sup>1</sup>	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Northeast	18.6	15.6	14.1	12.9	19.5	14.1	12.5	11.0	13.1	11.6
Midwest	22.4	18.8	19.3	25.3	19.1	17.9	20.9	19.8	21.7	18.1
South	36.1	41.9	43.0	38.2	38.4	43.9	41.3	45.2	41.3	34.1
West	23.0	23.7	23.7	23.6	22.9	24.1	25.4	23.9	23.9	36.2

<sup>1</sup> Because of rounding, the percentages may not add to 100.0.

NOTE: Although arson data are included in the trend and clearance tables, sufficient data are not available to estimate totals for this offense. Therefore, no arson data are published in this table.

NOTE: Although arson data are included in the trend and clearance tables, sufficient data are not available to estimate totals for this offense. Therefore, no arson data are published in this table.

 <sup>&</sup>lt;sup>1</sup> Populations are U.S. Census Bureau provisional estimates as of July 1, 2004, and July 1, 2003.
 <sup>2</sup> The 2003 crime figures have been adjusted.
 <sup>3</sup> Limited data for 2004 were available for Illinois. See Offense Estimation, Appendix I, for details.

<sup>&</sup>lt;sup>4</sup> Includes offenses reported by the Zoological Police and the Metro Transit Police.

<sup>\*</sup>Less than one-tenth of 1 percent.

<sup>&</sup>lt;sup>1</sup>The FBI does not publish arson data unless it receives data from either the agency or the state for all 12 months of the calendar year.

<sup>2</sup>The population for the city of Mobile, Alabama, includes 55,864 inhabitants from the jurisdiction of the Mobile County Sheriff's Department.

<sup>&</sup>lt;sup>3</sup> Because of changes in reporting practices, annexations, and/or incomplete data, figures are not comparable to previous years' data.

<sup>&</sup>lt;sup>4</sup>Limited data for 2004 were available for Illinois.

<sup>&</sup>lt;sup>5</sup>The data collection methodology for the offense of

with national UCR guidelines. Consequently, their figures for forcible rape and violent crime (of which forcible rape is a part) are not included in this table.

<sup>&</sup>lt;sup>6</sup>The data collection methodology for the offense of aggravated assault used by these agencies does not comply with national UCR guidelines. Consequently, their figures for aggravated assault and violent crime (of which aggravated assault is a part) are not included in this table.

<sup>&</sup>lt;sup>1</sup> The student enrollment figures provided by the United States Department of Education are for the 2002 school year, the most recent available. The enrollment figures include full-time and part-time students. See Appendix I for details.

<sup>&</sup>lt;sup>2</sup> The FBI does not publish arson data unless it receives data from either the agency or the state for all 12 months of the calendar year.

<sup>&</sup>lt;sup>3</sup> Because of changes in reporting practices, annexations, and/or incomplete data, figures are not comparable to previous years' data.

<sup>&</sup>lt;sup>4</sup> Student enrollment figures were not available.

NOTE: Caution should be exercised in making any intercampus comparisons or ranking schools because university/college crime statistics are affected by a variety of factors. These include demographic characteristics of the surrounding community, ratio of male to female students, number of on-campus residents, accessibility of outside visitors, size of enrollment, etc.

<sup>&</sup>lt;sup>1</sup> The FBI does not publish arson data unless it receives data from either the agency or the state for all 12 months of the calendar year. <sup>2</sup> Because of changes in reporting practices, annexations, and/or incomplete data, figures are not comparable to previous years' data.

<sup>&</sup>lt;sup>3</sup> Figures reported are the number of crimes occurring in New Jersey.

<sup>&</sup>lt;sup>4</sup> Figures reported are the number of crimes occurring in New York.

<sup>&</sup>lt;sup>1</sup> The data collection methodology for the off

comply with national UCR guidelines. Consequently, their figures for forcible rape and violent crime (of which forcible rape is a part) are not included in this table.

<sup>&</sup>lt;sup>2</sup> Includes state police agencies that report aggregately for the entire state.

<sup>3</sup> Suburban area includes law enforcement agencies in cities with less than 50,000 inhabitants and county law enforcement agencies that are within a Metropolitan Statistical Area (see Appendix III). Suburban area excludes all metropolitan agencies associated with a principal city. The agencies associated with suburban areas also appear in other groups within this table.

<sup>\*</sup>Less than one-tenth of 1 percent.

<sup>&</sup>lt;sup>1</sup> Metropolitan counties include sheriffs and county law enforcement agencies associated with a Metropolitan Statistical Area (see Appendix III). Nonmetropolitan counties include sheriffs and county law enforcement agencies that are not associated with a Metropolitan Statistical Area. The offenses from state police agencies are not included in this table.

\*Less than one-tenth of 1 percent.

# **SECTION III** Offenses Cleared

# **Offenses Cleared**

Law enforcement agencies reporting crime to the FBI can clear, or "close," the offenses in one of two ways: by arrest or by exceptional means. However, the administrative closing of a case by a local law enforcement agency does not necessarily mean that the agency can clear an offense for UCR purposes. To clear an offense within the Program's guidelines, the reporting agency must adhere to certain criteria, which are outlined in the following text. (Note: The UCR Program does not distinguish between offenses cleared by arrest and those cleared by exceptional means in its data presentations. The distinction is made solely for the purpose of a definition and not for data collection and publication.)

## **Cleared by Arrest**

In the UCR Program, a law enforcement agency reports that an offense is cleared by arrest, or solved for crime reporting purposes, when at least one person is:

- · Arrested.
- Charged with the commission of the offense.
- Turned over to the court for prosecution (whether following arrest, court summons, or police notice).

To qualify as a clearance, *all* of the conditions listed above must have been met. In its calculations, the UCR Program counts the number of offenses that are cleared, not the number of arrestees. Therefore, the arrest of one person may clear several crimes, and the arrest of many persons may clear only one offense. In addition, some clearances that an agency records in a particular calendar year, such as 2004, may pertain to offenses that occurred in previous years.

## **Cleared by Exceptional Means**

In certain situations, elements beyond law enforcement's control prevent the agency from arresting and formally charging the offender. When this occurs, the agency can clear the offense exceptionally. There are four Program requirements that law enforcement must meet in order to clear an offense by exceptional means. The agency must have:

- · Identified the offender.
- Gathered enough evidence to support an arrest, make a charge, and turn over the offender to the court for prosecution.
- Identified the offender's exact location so that the suspect could be taken into custody immediately.
- Encountered a circumstance outside the control of law enforcement that prohibits the agency from arresting, charging, and prosecuting the offender.

Examples of exceptional clearances include, but are not limited to, the death of the offender (e.g., suicide or justifiably killed by police or citizen); the victim's refusal to cooperate with the prosecution after the offender has been identified; or the denial of extradition because the offender committed a crime in another jurisdiction and is being prosecuted for that offense. In the UCR Program, the recovery of property does not clear an offense.

#### **National Clearances**

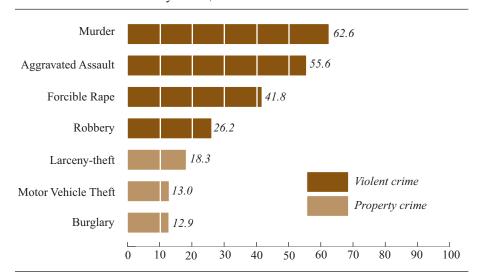

A review of the data for 2004 revealed that the percentages of violent and property crime offenses cleared by arrest or exceptional means remained virtually unchanged from the 2003 percentages. In 2004, law enforcement agencies in the United States cleared 46.3 percent of violent crimes (murder, forcible rape, robbery, and aggravated assault) and 16.5 percent of property crimes (burglary, larceny-theft, and motor vehicle theft) brought to their attention. In addition, law enforcement cleared 17.1 percent of arson offenses, which are reported in a slightly different manner than the other property crimes. (More details concerning this offense are furnished in the Arson section.)

As in most years, law enforcement agencies cleared a higher percentage of violent crimes than property crimes in 2004. As a rule, this long-term trend is attributed to the more vigorous investigative efforts that are given to violent crimes. In addition, violent crimes more often involve victims and/or witnesses who are able to identify the perpetrators.

A breakdown of the clearances for violent crimes for 2004 revealed that the Nation's law enforcement agencies cleared 62.6 percent of murder offenses, 55.6 percent of aggravated assaults,

Figure 3.1

Crimes Cleared by Arrest
Percent of Crimes Cleared by Arrest, 2004

41.8 percent of forcible rapes, and 26.2 percent of robbery offenses. The data for property crimes showed that agencies cleared 18.3 percent of larceny-theft offenses, 13.0 percent of motor vehicle theft offenses, and 12.9 percent of burglary offenses. (See Table 25.)

## **Regional Clearances**

The UCR Program divides the Nation into four regions: the Northeast, the Midwest, the South, and the West. (See Appendix III.) A review of clearance data for 2004 by region showed that agencies in the Northeast cleared the greatest proportion of their violent crime offenses (50.3 percent). Agencies in the West cleared 47.1 percent of their violent crimes, and law enforcement in the South and the Midwest cleared 46.2 percent and 41.8 percent, respectively.

Clearance data for 2004 showed that, among the regions, agencies in the Northeast cleared the highest percentage of their property crimes (20.2 percent). Law enforcement in the South and Midwest cleared 16.9 percent and 16.2 per-

cent, respectively. Agencies in the West cleared 14.6 percent of their property crimes. (See Table 26.)

## **Clearances by Population Groups**

The UCR Program uses the following population group designations in its data presentations: cities (grouped according to population size) and counties (classified as either metropolitan or nonmetropolitan). (A breakdown of these classifications is furnished in Appendix III.)

#### Cities

In 2004, the clearance data collected showed that law enforcement agencies in the Nation's cities cleared 43.7 percent of their violent crime offenses. Among the city population groups, agencies in the smallest cities, those with populations under 10,000 inhabitants, cleared the greatest proportion of their violent crime offenses (57.7 percent), and law enforcement in the Nation's largest cities, those with 250,000 or more residents, cleared the smallest proportion of their violent crime offenses (38.5

percent). The clearance data for murder, an offense of particular interest to law enforcement, showed that among the city population groups, agencies in cities with populations ranging from 10,000 to 24,999 cleared the greatest percentage of their murders (74.4 percent), Law enforcement in the Nation's largest cities cleared the lowest percentage of their murders (58.0 percent).

A further review of the clearance data for 2004 showed that agencies in the Nation's cities cleared 16.4 percent of their property crime offenses. Law enforcement in cities with populations ranging from 10,000 to 24,999 residents cleared the highest proportion of the property crimes (20.9 percent) brought to their attention, and as with the clearances for violent crime, agencies in the largest cities cleared the smallest proportion of their property crimes (12.9 percent). Of the property crimes known to law enforcement in cities collectively, the highest percentage of offenses cleared was for larceny-theft offenses at 18.4 percent. (See Table 25.)

## Metropolitan counties

An examination of clearance data submitted by law enforcement in metropolitan counties in 2004 showed that these agencies cleared 54.5 percent of their violent crime offenses. Of the violent crimes made known to them, law enforcement in metropolitan counties most often cleared their murder offenses, reporting that 64.4 percent of those offenses were cleared. Further, clearance data also showed that law enforcement in metropolitan counties cleared 16.9 percent of their total property crimes. Of the property crimes known to agencies in these counties, the greatest percentage of clearances was for larceny-theft offenses (18.0 percent). (See Table 25.)

#### Nonmetropolitan counties

Just as for metropolitan counties, clearance figures for nonmetropolitan counties showed that these agencies collectively cleared a greater proportion of their violent crimes and property crimes —with the exception of larceny-theft—than did the Nation as a whole in 2004. A further breakdown of the clearance data revealed that agencies in nonmetropolitan counties cleared 60.6 percent of their violent crime offenses, and of the violent crimes known to them, law enforcement in these counties had the highest number of clearances for murder (74.2 percent). A further examination of the clearance data collected also showed that law enforcement in these counties cleared 17.8 percent of their property crime offenses. Among the property crimes known to these agencies, the highest percentage of offenses cleared was for motor vehicle theft at 26.0 percent. In addition, law enforcement in these counties cleared 17.7 percent of their larceny-theft offenses. (See Table 25.)

# Clearances Involving Only Persons Under 18 Years of Age

When an offender under the age of 18 is cited to appear in juvenile court or before other juvenile authorities, the UCR Program considers the incident for which the juvenile is being held responsible to be cleared by arrest, although a physical arrest may not have occurred. In addition, according to Program definitions, clearances that include both adult and juvenile offenders are classified as clearances for crimes committed by adults. Therefore, because the clearance percentages for crimes committed by juveniles include only those clearances in which no adults were involved, the figures in this publication should not be used to present a definitive picture of juvenile involvement in crime.

Of the clearances for violent crime that were reported in the Nation in 2004, 12.1 percent involved only juveniles, a rate that remained virtually unchanged from the previous year's statistics. In addition, 18.9 percent of clearances for property crime in 2004 involved only juveniles, down slightly from the 19.3 percent of clearances for property crime in 2003. Of all the crime categories—for both violent crime and property crime—clearances for murder offenses had the lowest percentage of involvement solely by juveniles (4.7 percent), and arson clearances involving only juveniles comprised the highest percentage (42.7 percent).

Clearance data broken down by population groups revealed that in cities collectively 12.3 percent of the clearances for violent crime involved juveniles only. Of the city groups, law enforcement agencies in cities with populations ranging from 25,000 to 49,999 inhabitants reported the largest percentage of clearances for violent crime that involved only juvenile offenders (14.2 percent). During 2004, 12.3 percent of clearances for violent crime in metropolitan counties and 9.3 percent of clearances for violent crimes in nonmetropolitan counties exclusively involved juveniles.

Clearance data collected for property crime offenses committed in the Nation's cities showed that 19.6 percent of these clearances solely involved juveniles. Law enforcement agencies in cities with populations ranging from 50,000 to 99,999 inhabitants reported the largest percentage of property crime clearances exclusively involving juveniles (21.7 percent). In metropolitan counties, 16.4 percent of the property crime clearances involved juveniles only, and in nonmetropolitan counties, 14.8 percent of property crime clearances involved juveniles only. (See Table 28.)

#### **Advisory**

Information regarding the UCR Program's statistical methodology and table construction can be found in Appendix I.

${ m SUBURBAN\ AREA}^2$																			
6,734 agencies;																			

<sup>1</sup> Not all agencies submit reports for anson to the FBI. As a result, the number of reports the FBI uses to compute the percent of offenses cleared for all other offenses. Agencies must report arson clearances by detailed property classification as specified on the *Monthly Return of Arson Offenses Known to Law Enforcement* to be included in this table; therefore, clearances in this table may differ from other clearance tables.

<sup>2</sup> Suburban area includes law enforcement agencies in cities with less than 50,000 inhabitants and county law enforcement agencies that are within a Metropolitan Statistical Area (see Appendix III). Suburban area excludes all metropolitan agencies associated with a principal city. The agencies associated with suburban areas also appear in other groups within this table.

<sup>&</sup>lt;sup>1</sup> Not all agencies submit reports for arson to the FBI. As a result, the number of reports the FBI uses to compute the percent of offenses cleared for arson is less than the number it uses to compute the percent of offenses cleared for all other offenses.

<sup>&</sup>lt;sup>2</sup> Suburban area includes law enforcement agencies in cities with less than 50,000 inhabitants and county law enforcement agencies that are within a Metropolitan Statistical Area (see Appendix III). Suburban area excludes all metropolitan agencies associated with a principal city. The agencies associated with suburban areas also appear in other groups within this table.

# **SECTION IV** Persons Arrested

# Persons Arrested data updated 02/17/06

In the Uniform Crime Reporting (UCR) Program, one arrest is counted for each separate instance in which an individual is arrested, cited, or summoned for criminal acts in Part I and Part II crimes. (See Appendix II for additional information concerning Part I and Part II crimes.) One person may be arrested multiple times during the year; as a result, the arrest figures in this section should not be viewed as a total number of individuals arrested. Rather, this section provides the number of arrest occurrences that were reported by law enforcement.

#### **National Volume, Trends, and Rates**

In 2004, the UCR Program estimated the number of arrests in the United States for all criminal offenses (except traffic violations) at approximately 14 million. Law enforcement made an estimated 1.6 million arrests (11.8 percent of all arrests) for property crimes and 586,558 arrests (4.2 percent of all arrests) for violent crimes. Law officers made more arrests for drug abuse violations (an estimated 1.7 million arrests and 12.5 percent of all arrests) than for any other offense. (See Table 29.)

In 2004, the estimated rate of arrests in the Nation was 4,752.4 arrests per 100,000 residents. Arrests for violent crimes were measured at a rate of 200.4 arrests per 100,000 inhabitants—for property crimes, 565.8 arrests per 100,000 persons. (See Table 30.)

A comparison of arrest figures from 2003 to 2004 data revealed a 1.1-percent increase. Arrests for violent crimes fell 1.5 percent, and the number for property crimes rose slightly (0.6 percent) in the 2-year period. An examination of the 5- and 10-year arrest trends showed that the total number of arrests in 2004 declined 0.6 percent from the 2000 total and 5.1 percent from the 1995 level. Arrests for violent crimes showed a 3.5-percent decrease from 2000 to 2004. In the 10-year trend (1995 to 2004), the number of arrests showed a steeper decline (16.9 percent). For

property crimes, the number of arrests remained virtually unchanged in the 5-year trend, but the number dropped 22.6 percent in the 10-year trend. (See Tables 32, 34, and 36.)

#### By Age, Sex, and Race

Law enforcement agencies that contributed arrest data to the UCR Program reported information on the age, sex, and race of the persons they arrested. According to the 2004 data, adults accounted for 84.2 percent of arrestees nationally. (See Table 38.)

A review of arrest data by age from 2003 to 2004 showed that arrests of adults increased 1.6 percent. Arrests of adults for property crimes increased 2.1 percent, but arrests of adults for violent crimes dropped 1.6 percent over the same time span. In contrast to the 2-year arrest trend of adults, the arrest total for juveniles in 2004 decreased 1.7 percent from the 2003 figure. Over the same 2-year period, arrests of juveniles for violent crimes declined 1.0 percent and for property crimes dropped 2.9 percent. (See Table 36.)

By gender, 76.2 percent of arrests in 2004 were of males. Males accounted for 82.1 percent of the total number of arrestees for violent crimes and 68.1 percent of the total for property crimes. (See Table 42.)

A review of the 2004 arrest data by race indicated that 70.8 percent of arrestees were white, 26.8 percent were black, and 2.4 percent were of other races (American Indian or Alaskan Native and Asian or Pacific Islander). Of all arrestees for violent crimes, 60.9 percent were white, 36.9 percent were black, and the remainder were of other races. Of all arrestees for property crimes, 69.3 percent were white, 28.2 percent were black, and the remaining 2.5 percent were of other races. Whites were most commonly arrested for driving under the influence (893,212 arrests) and drug abuse violations (821,047 arrests). Blacks were most frequently arrested for drug abuse violations (406,890 arrests) and simple assaults (288,286 arrests). (See Table 43.)

#### **Regional Arrest Rates**

The UCR Program divides the United States into four regions: the Northeast, the Midwest, the South, and the West. (Appendix III provides a map delineating the regions.) The following paragraphs furnish a regional overview of persons arrested.

### The Northeast

Law enforcement agencies in the Northeast had an overall arrest rate of 3,738.5 arrests per 100,000 inhabitants, well below the national rate (4,752.4 arrest per 100,000 persons). In this region, the arrest rate for violent crimes was 167.6 arrests per 100,000 persons and for property crime, 437.6 arrests per 100,000 inhabitants. (See Table 30.)

**Table 4.1** data updated 02/17/06

# Arrests for Drug Abuse Violations by Region, 2004

Drug abuse violations	United States total	Northeast	Midwest	South	West
Total <sup>1</sup>	100.0	100.0	100.0	100.0	100.0
Sale/Manufacturing:	18.2	24.3	18.6	17.9	15.3
Heroin or cocaine and their derivatives	8.3	16.0	5.2	8.5	5.7
Marijuana	5.0	6.2	7.4	4.3	4.0
Synthetic or manufactured drugs	1.6	1.0	1.6	2.8	0.7
Other dangerous nonnarcotic drugs	3.3	1.1	4.5	2.3	4.9
Possession:	81.8	75.7	81.4	82.1	84.7
Heroin or cocaine and their derivatives	22.0	25.2	13.7	23.1	23.0
Marijuana	39.3	42.3	50.6	46.9	25.4
Synthetic or manufactured drugs	3.5	1.8	3.5	4.7	3.3
Other dangerous	17.0	6.4	13.5	7.4	33.0

<sup>&</sup>lt;sup>1</sup>Because of rounding, the percentages may not add to 100.0.

#### The Midwest

In the Midwest, law enforcement agencies had a rate of 4,692.0 arrests per 100,000 residents. The arrest rate for violent crimes was 159.1 arrests per 100,000 persons. For property crimes, the rate was 538.7 arrests per 100,000 in population. (See Table 30.)

#### The South

In the Nation's most populous region, the South, law enforcement agencies recorded arrests at a rate of 5,407.8 per 100,000 inhabitants. Arrests for violent crime occurred at a rate of 188.1 arrests per 100,000 residents and for property crime, 625.1 arrests per 100,000 inhabitants. (See Table 30.)

#### The West

Law enforcement agencies in the Western states had an overall arrest rate of 4,764.7 arrests per 100,000 residents. Arrests for violent crimes in this region occurred at a rate of 266.1 arrests per 100,000 in population, and for property crimes at a rate of 607.4 arrests per 100,000 persons. (See Table 30.)

# Population Groups: Rates and Trends

The national UCR Program aggregates data by various population groups, which include cities, metropolitan counties, and nonmetropolitan counties. A definition of these groups can be found in Appendix III. In 2004, law enforcement agencies in cities as a whole recorded an arrest rate of 5,220.7 arrests per 100,000 inhabitants. The Nation's smallest cities, those with less than 10,000 inhabitants, had the highest arrest rate among the city population groups with 6,189.2 arrests per 100,000 residents. Law enforcement agencies in cities with populations from 25,000 to 49,999 recorded the lowest rate, 4,556.1 arrests per 100,000 persons. In the Nation's metropolitan counties, law

officers made arrests at a rate of 3,685.6 arrests per 100,000 inhabitants. Officers in nonmetropolitan counties made arrests at a rate of 3,879.7. (See Table 31.)

The total number of arrests in U.S. cities increased 1.5 percent from 2003 to 2004. The number of arrests for property crimes rose less than 1 percent (+0.8 percent) in cities during the 2-year time frame; however, arrests for violent crimes in cities dropped 1.8 percent. (See Table 44.)

#### Distribution by Age, Sex, and Race

In 2004, law enforcement in the Nation's cities reported that 82.7 percent of arrests in their jurisdictions were of adults, and 17.3 percent of arrests were of juveniles. Adults accounted for 83.6 percent of arrestees for violent crimes and juveniles, 16.4 percent. Adults made up 71.7 percent of the arrestees for property crimes, and juveniles accounted for 28.3 percent. Of all arrests in the Nation's cities in 2004, 46.8 percent were of individuals under age 25. (See Tables 46 and 47.) In metropolitan counties, 87.4 percent of arrests were of adults, and 12.6 percent of arrests were of juveniles. In nonmetropolitan counties, 91.5 percent of persons arrested were adults, and 9.5 percent were juveniles. (Based on Tables 53 and 59.)

A breakdown of arrests by gender showed that males accounted for 75.8 percent of arrestees in the Nation's cities. (See Table 48.) In metropolitan counties, males comprised 77.5 percent of all arrestees; in nonmetropolitan counties, males made up 77.7 percent of arrestees. (See Tables 54 and 60.)

By race, 68.5 percent of arrestees in the Nation's cities were white, 29.1 percent were black, and the remainder were of other races. (See Table 49.) Whites accounted for 75.9 percent of arrestees in metropolitan counties in 2004, blacks comprised 22.7 percent, and persons of other races made up 1.4 percent of the total. (See Table 55.) In nonmetropolitan counties, whites made up 83.4 percent of arrestees, blacks, 12.4, and other races, 4.2 percent. (See Table 61.)

# **Advisory**

Information regarding the UCR Program's statistical methodology and table construction can be found in Appendix I.

Table 29data updated 02/17/06

# **Estimated Number of Arrests**

United States, 2004

<sup>&</sup>lt;sup>1</sup> Suburban area includes law enforcement agencies in cities with less than 50,000 inhabitants and county law enforcement agencies that are within a Metropolitan Statistical Area (see Appendix III). Suburban area excludes all metropolitan agencies associated with a principal city.

<sup>&</sup>lt;sup>2</sup> Does not include suspicion.

<sup>&</sup>lt;sup>3</sup> Violent crimes are offenses of murder, forcible rape, robbery, and aggravated assault. Property crimes are offenses of burglary, larceny-theft, motor vehicle theft, and arson.

<sup>\*</sup>Less than one-tenth of 1 percent.

# **SECTION V** Special Reports

# **Arrest of Juveniles for Drug Abuse Violations from 1994 to 2003**

#### Introduction

One major social ill facing the United States is drug abuse and its impact on the person and on society as a whole. Arrest data from the Uniform Crime Reporting (UCR) Program show that within the past decade alone, the number of arrests for drug abuse violations has increased 24.2 percent. In fact, the estimated number of arrests for drug abuse violations for the 10-year period 1994 to 2003 topped 15.4 million. Trends for overall arrests involving drug abuse suggest that this social problem shows no signs of abating. (See Table 5.1.)

### **Objective**

Analyzing the characteristics of those arrested has long been a valuable tool for law enforcement in the war against crime. The objective of this study is to analyze the data provided to the UCR Program by the local, county, and state law enforcement agencies pertaining to the juveniles (individuals under

Table 5.1
Estimated Number of Drug Arrests, 1994-2003

Year	Total	Adult	Juvenile
Total	15,416,973	13,503,421	1,913,552
1994	1,351,400	1,192,342	159,058
1995	1,476,100	1,287,231	188,869

1998	1,559,100	1,364,810	194,290
1999	1,557,100	1,367,561	189,539
2000	1,579,566	1,387,138	192,428
2001	1,586,902	1,391,666	195,236
2002	1,538,813	1,354,259	184,554
2003	1,678,192	1,482,724	195,468

Note: Prior to 2000, the FBI rounded estimated total numbers to the nearest 100.

age 18) whom they arrested for drug abuse violations during the decade of 1994 to 2003.

### Methodology

This study uses simple statistics and graphical tools to analyze the data received by the UCR Program concerning juveniles arrested for drug abuse violations over the 10-year period under consideration. The age, sex, and race of the juvenile arrestees are featured, and trends and patterns are illustrated by the tables and graphs.

#### Data

In the UCR Program, one arrest is counted for each separate instance in which an individual is arrested, cited, or summoned for a criminal act. An individual may be arrested multiple times during a year; therefore, the UCR Program's arrest figures do not represent the total number of persons arrested, but rather an accounting of the number of instances of arrest by law enforcement agencies. Because participation in the Program is voluntary, many agencies submit fewer than 12 months of arrest data. The actual arrest counts from those agencies submitting 12 months of complete arrest data were the base for this study. Those actual arrest counts were then used to estimate the number of arrests for the agencies that submitted fewer than 12 months of arrest data. (Details about the process used for making these estimations are provided in the Appendix at the end of this study.)

The UCR Program defines a juvenile as a person under the age of 18. The data used in this study include the age, sex, and race information reported to the Program concerning juveniles arrested for drug abuse violations over the 10-year

Table 5.2

<sup>\*</sup> Less than one-tenth of 1 percent.

period 1994 to 2003. The reader should know that the details collected by the UCR Program concerning the arrests made by law enforcement for drug abuse violations include the type of drug involved, differentiating between sale/manufacturing and possession of the following four drug categories: opium or cocaine and their derivatives (e.g. morphine, heroin, codeine); marijuana; synthetic narcotics—manufactured narcotics which can cause true drug addiction (e.g. Demerol, methadone); and dangerous nonnarcotic drugs (e.g. barbiturates, Benzedrine). This study uses these categories and definitions as well.

Finally, for this paper, the term *drug abuse* encompasses sale/manufacturing and possession, unless otherwise stated. In addition, the number of arrests implies *estimated* values. For convenience and ease of reading, *opium or cocaine* will be used for the category opium or cocaine and their derivatives.

### **Analysis**

Of the total number (15,416,973) of arrests for drug abuse violations during the decade (1994–2003) examined for this study, 12.4 percent were of juveniles (persons under age 18). (See Table 5.1.) The following text provides an analysis of the data furnished to the UCR Program concerning those arrests.

### By Age

Law enforcement agencies made over 1.9 million arrests of juveniles for drug abuse violations from 1994 to 2003. The data further revealed that in 1994, persons under 18 accounted for 11.8 percent of the number of arrests for drug abuse. Ten years later, the juvenile proportion of arrests for drug abuse violations was virtually unchanged: 11.6 percent. (Based on Table 5.1.) In addition, the data provided by the arresting agencies showed that in 1997, the Nation experienced the highest number of arrests of juveniles for drug abuse violations for the 10-year period under consideration. During that year, nearly 209,000 arrests of juveniles were made for either the sale/manufacture or possession of illegal drugs. (See Tables 5.1 and 5.2.)

A breakdown of the data showed that the majority (ranging from 73.8 percent in 1994 to 83.7 percent in 2003) of the arrests of juveniles for the period studied were for possession of drugs rather than the sale or manufacturing of illegal substances. (Based on Table 5.2.) Over the 10-year span, the number of arrests of juveniles for violations involving opium or cocaine declined, while arrests involving marijuana increased. Marijuana remained the drug type associated with the highest percentage of juveniles arrested for drug abuse. Arrests of juveniles for violations involving synthetic narcotics and dangerous nonnarcotics consistently accounted for the

lowest percentage of juveniles arrested for drug abuse violations for the 10-year period. (See Figure 5.1.)

A review of the arrest data from 1994 to 2003 showed that the overall number of arrests of juveniles for drug abuse violations increased 22.9 percent. The number of arrests involving each drug type, with the exception of opium or cocaine, increased during the decade. Arrests for violations involving marijuana rose 60.5 percent, arrests involving synthetic narcotics increased 162.8 percent—the highest propor-

	Female	0.3	3.1	20.1	18.9	24.5	33.1

tional increase, and arrests involving dangerous nonnarcotics rose 38.4 percent. Arrests of juveniles for violations involving opium or cocaine, however, declined 50.9 percent when comparing the number of arrests for drug abuse for 2003 with the number for 1994. (Based on Tables 5.1 and 5.2.)

A comparison of data concerning arrests for drug abuse from 1999 and 2003, a five-year trend, indicated the number of arrests of juveniles for violations involving marijuana increased 4.2 percent, arrests of juveniles involved with synthetic narcotics increased 80.6 percent, and arrests of juveniles involved with dangerous nonnarcotics increased 55.2 percent. Arrests of juveniles for violations involving opium or cocaine decreased 27.7 percent during this period. (Based on Table 5.2.)

During the two-year period from 2002 to 2003, the number of arrests of juveniles for violations involving marijuana, synthetic narcotics, and dangerous nonnarcotics increased 7.9 percent, 8.8 percent, and 8.2 percent, respectively. However, the number of arrests of juveniles involved with opium or cocaine declined 5.7 percent. (Based on Table 5.2.)

A review of the arrest data for 2003 revealed that the overall number of arrests of juveniles for the sale/manufacturing or possession of marijuana accounted for over 7 out of every 10 arrests of juveniles for drug abuse. Arrests for the sale/manufacturing or possession of marijuana accounted for 73.0 percent of the arrests of juveniles for drug abuse violations, followed by opium or cocaine with 13.2 percent of the arrests, dangerous nonnarcotics with 10.9 percent, and synthetic narcotics with 2.9 percent. (Based on Table 5.2.)

### By Age and Sex

A review of the data for the number of arrests of juveniles for drug abuse violations for each sex and age group showed that, as expected, juveniles 12 years of age and younger comprised the lowest percentage of arrests of juveniles for each year of the 10-year period covered. An examination of the data by sex showed that a lower percentage of female juveniles were arrested than were male juveniles for each age group. The group showing the highest percentage of arrests for each year during the 10-year period was 17-year-old males. (See Table 5.3.)

The data for the 10 years covered in this study showed that of the number of arrests in 1994 for drug abuse violations involving juveniles under age 10, 83.0 percent were males and 17.0 percent were females. A decade later, the percentage of arrests for drug abuse violations of males under age 10 dropped to 78.9 percent, and the percentage of arrests of females increased to 21.1 percent. (See Table 5.4.)

An examination of the data for all juveniles arrested for drug abuse violations within sex and by each age group

by Drug Type and Arrestee's Sex 2-, 5-, and 10-year Comparisons

	2003/2002		2003.	/1999	2003	/1994
	Male	Female	Male	Female	Male	Female
All Drug Types	5.1	10.2	-0.2	22.6	15.4	79.2
Opium or Cocaine	-7.0	1.5	-30.5	-8.5	-54.8	-10.7
Marijuana	7.4	10.7	2.1	16.8	54.9	97.7
Synthetic Narcotics	6.7	14.7	64.9	141.3	133.6	293.6
Dangerous Nonnarcotics	6.3	14.4	47.4	86.3	23.0	127.9

showed that a higher proportion of female juveniles were arrested at a younger age (15 and under) than were male juveniles. This held true for each year of the 10-year period considered in this study. (See Table 5.5.) The number of arrests of male juveniles for drug abuse violations accounted for over 80.0 percent of the total number of arrests of juveniles for drug abuse; however, the number decreased slightly over the 10-year period. In contrast, arrests of female juveniles marginally increased over the 10-year period, but remained under 20.0 percent of the total. (See Table 5.6.)

Arrests of male juveniles invariably account for the largest proportion of the arrests of juveniles for drug abuse violations—82.8 percent to 88.2 percent of the total arrests during the 10-year span of this study. When the sex of the arrestees within drug type was compared, the data showed that male juveniles composed a greater percentage of the total arrests for violations involving opium or cocaine, followed by violations involving marijuana. This held true for all 10 years studied. A year-by-year review of the arrest data involving synthetic narcotics and dangerous nonnarcotics by sex of the arrestees within drug type showed that from 1994 to 1998, violations involving these two drug types were consistently the third and fourth most frequent cause of arrest (and they often exchanged positions). From 1999 to 2003, the percentage of male juveniles arrested for violations involving synthetic narcotics proportionally followed dangerous nonnarcotics in percentage of arrests. (See Table 5.6.)

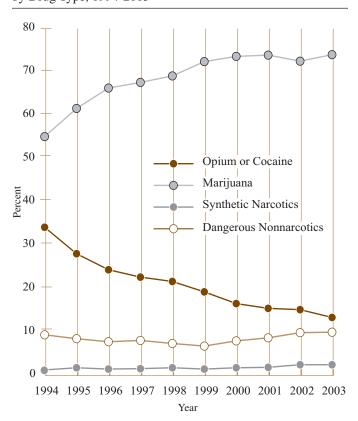

For the 10-, five-, and two-year periods examined for this study, the data reflected that the percent of change in the number of arrests of female juveniles for all drug types combined was larger than that for male juveniles, although male juveniles were more frequently arrested than female juveniles for violations involving each of the four drug types. (See Tables 5.6 and 5.7.) With the exception of violations involving opium or cocaine, the percent of change for arrests involving each of the four drug types by sex showed that the percentage increase for the arrests of female juveniles was much higher than the percentage increase in the number of arrests for male juveniles. There was a decrease in the

number of arrests of both female and male juveniles for the 10- and five-year periods for violations involving opium or cocaine. The number of arrests of male juveniles for drug abuse violations involving each drug type (except opium or cocaine) increased in 2003 when compared to the number in 2002. The number of arrests of male juveniles for violations involving opium or cocaine decreased 7.0 percent when comparing the data from this two-year period. Arrests of female juveniles for drug abuse violations increased for each drug type. Interestingly, arrests of female juveniles for drug abuse violations involving opium or cocaine increased 1.5 percent in contrast to the male juvenile experience, which showed a decrease for the same period. (See Table 5.7.)

Marijuana was the drug for which more male juveniles were arrested than for any other drug type each year from 1994 to 2003. Male juveniles arrested for the sale/manufacturing and possession of marijuana combined increased from 55.1 percent of the arrests of male juveniles in 1994 to 74.0 percent in 2003. Arrests of male juveniles for violations involving opium or cocaine fell from 34.2 percent of the arrests of male juveniles for drugs in 1994 to 13.4 percent in 2003. The percentage of arrests of male juveniles for viola-

Figure 5.2

Percent Distribution of the Estimated Number of Drug Arrests of Male Juveniles by Drug Type, 1994-2003

tions involving dangerous nonnarcotic drugs was nearly equal to the percentage of arrests of male juveniles for violations involving opium or cocaine in 2003. (See Figure 5.2.)

Similarly, arrests for violations involving marijuana accounted for the highest percentage of arrests of female juveniles for drug abuse violations for each year of the 10 years under consideration. The percentage of arrests of female juveniles for violations involving opium or cocaine decreased from 1994 to 2003. The percentage of arrests of female juveniles for violations involving dangerous nonnarcotics was higher than that of opium or cocaine for 2002 and 2003. (See Figure 5.3.)

### By Age and Race

The four race categories for which data are collected by the UCR Program are white, black, American Indian or Alaskan Native, and Asian or Pacific Islander. A review of the percent distribution of arrests within drug type by the arrestee's race showed that for all drug types combined, white juvenile arrestees accounted for 60.6 percent of the total in 1994; the number rose 23.6 percent to 74.9 percent of the total in 2003. Conversely, the percent of arrestees who were black juveniles fell 39.4 percent for all drug types combined, from 38.1 percent

	Nonnarcotics				

in 1994 to 23.1 percent in 2003. (Based on Table 5.8.) The percent of other races (American Indian or Alaskan Native and Asian or Pacific Islander) combined accounted for a minimal portion of juvenile arrestees when compared to the percentage of white and black juveniles arrested. In 1994, other races accounted for 1.3 percent, and in 2003, that percentage rose to 1.9 percent for all drug types combined. (Based on Table 5.8.)

An examination of the percent of arrests by race within drug type showed that black juveniles were more likely to be arrested for violations involving opium or cocaine than any other racial group. Whites were more likely to be arrested for violations involving the other three drug categories. The proportion of white juveniles arrested rose 25.2 percent from 66.6 percent of the arrests for violations involving dangerous nonnarcotics in 1994 to 83.4 percent in 2003. (Based on Table 5.8.)

An analysis of the data for 1994 and 2003 showed that the number of arrests of black juveniles for drug abuse violations decreased 25.6 percent for all drug types combined. The number of arrests of black juveniles fell 59.2 percent for violations involving opium or cocaine. Similarly, the number of arrests of white and Asian or Pacific Islander juveniles declined for violations involving opium or cocaine. The number of arrests of juveniles for violations involving marijuana and synthetic nonnarcotics increased for all races. Arrests involving dangerous nonnarcotics increased for each racial category except black. (See Table 5.9.)

When arrests for drug abuse violations for 2003 were compared to those in 1999, the number of arrests of black juveniles for drug abuse violations showed a decrease for all drug categories combined (16.7 percent); arrests of black juveniles also decreased for violations involving opium or cocaine (32.9 percent), and marijuana (9.5 percent). The number of arrests of juveniles declined for each of the other three racial groups for violations involving opium or cocaine. The number of arrests of juveniles of each race, with the exception of arrests of black juveniles for violations involving marijuana, increased for violations involving marijuana, synthetic narcotics, and dangerous nonnarcotics. (See Table 5.9.)

A review of the data for the two-year period of 2002 to 2003 revealed that the number of arrests of juveniles for violations involving all drugs combined decreased 9.7 percent for juveniles who were Asian or Pacific Islander. Each race showed a decrease in the number of arrests of juveniles for violations involving opium or cocaine. Although the number of drug-related arrests of juveniles who were Asian or Pacific Islanders declined 9.9 percent for marijuana and 26.3 percent for synthetic narcotics for 2003 over 2002, the number of arrests of juveniles of all other racial categories increased for those drug types for the same two-year period. The number of

All Drug Types	6.0	6.1	14.1	-9.7	11.0	-16.7	16.7	3.7	51.9	-25.6	130.6	56.1
Opium or Cocaine	-3.7	-7.8	-17.8	-17.0	-21.0	-32.9	-15.5	-32.5	-35.9	-59.2	133.4	-22.9
Marijuana	6.5	15.7	15.2	-9.9	8.0	-9.5	17.5	1.9	67.8	34.1	130.4	65.5
Synthetic Narcotics	7.6	4.5	53.1	-26.3	86.4	36.7	38.1	33.1	179.0	62.1	357.6	208.0
Dangerous Nonnarcotics	9.2	3.6	29.7	3.2	61.9	26.7	39.7	77.9	73.5	-36.9	97.1	81.1

arrests of juveniles of each race rose for violations involving dangerous nonnarcotics. (See Table 5.9.)

From 1994 to 2003, the 10 years of the study, the percentage of arrests of white juveniles for violations involving marijuana was, in every year, higher than for any other drug type. From 1994 to 1999, opium or cocaine violations were the second most common type leading to the arrest of white juveniles. However, beginning in 2000 and continuing until 2003, the final year of the study, the percentage of arrests of white juveniles for violations involving dangerous nonnarcotics became the second most common drug type leading to arrest. (See Figure 5.4.)

As previously observed, an examination of the data within drug type by arrestee's race for 1994 to 2003 showed that black juveniles were proportionally more likely to be arrested for violations involving opium or cocaine for each of the 10 years when compared to the other races. (See Table 5.8.) In contrast, when the data by drug type for arrests of black juveniles for each year during the period under consideration were analyzed, the percentage of arrests for violations involving opium or cocaine fell below the percentage of arrests for marijuana in 1997 and remained below through 2003. (See Figure 5.5.)

For each of the 10 years examined for this study, the highest percentage of arrests of juveniles of the race categories of American Indian or Alaskan Natives and Asian or Pacific Islanders for drug abuse was for violations involving marijuana. The percentages of arrests of juveniles in those two race categories for violations involving opium or cocaine and dangerous nonnarcotics varied higher and lower than one another several times during the 10-year period. Violations involving synthetic narcotics accounted for the lowest percentage of juvenile arrests for those two races. (See Figures 5.6 and 5.7.)

### Limitations

One limitation to this study is the fact that participating in the FBI's UCR Program is voluntary, and therefore, many agencies provide fewer than 12 months of arrest data to the Program. As a result, the actual arrest counts received by the Program must be estimated to account for those agencies that submit fewer than 12 months of arrest data for any given year. Another limitation to the data used in this study is the inclusion of the race of the arrestee and the drug breakdowns are not mandatory elements on participating agencies' arrest reports; therefore, the number of arrests that include race and drug breakdowns is generally lower than the arrest counts by age and sex. The agencies that contribute data to the FBI

### Figure 5.4

# Percent Distribution of the Estimated Number of Drug Arrests of White Juveniles

by Drug Type, 1994-2003

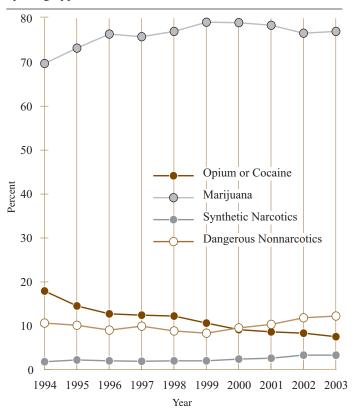

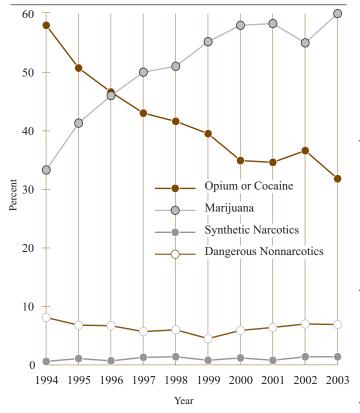

Figure 5.5

by Drug Type, 1994-2003

using the traditional Summary system are limited to collecting four drug categories with little specificity of drug type. (Currently, the UCR Program converts the data that are submitted through the Program's National Incident-Based Reporting System to Summary data before publication.) In spite of these limitations, this study illustrates the attributes of juveniles arrested for drug abuse violations as reported to the UCR Program from 1994 to 2003.

### **Summary and Conclusion**

Using basic statistics in tabular format and charts, this study presented the information received by the UCR Program over the 10-year period from 1994 to 2003 concerning the characteristics (i.e., the age, sex, and race) of juveniles arrested for drug abuse violations. In the past 10 years, the majority (68.7 percent) of the estimated number of arrests of juveniles for drug abuse violations (sale/manufacturing and possession combined) were for marijuana. A comparison of the number of arrests of juveniles for drug abuse violations in 2003 to that in 1994 showed that arrests of juveniles for violations involving marijuana increased 60.5 percent. The number of arrests of

juveniles for violations involving all drugs combined increased 22.9 percent from 1994 to 2003, with only arrests for violations involving opium or cocaine showing a decrease (50.9 percent) during the same period. In 1994, whites accounted for 60.6 percent of the juveniles arrested for drug abuse violations, increasing to 74.9 percent in 2003. In terms of sex, male juveniles were more often arrested for drug abuse violations than were female juveniles; however, female juveniles were shown to be arrested at a younger age than were male juveniles. By race within drug type, black juveniles comprised the majority of arrests for violations involving opium and cocaine. White juveniles accounted for the majority of arrests for violations involving the other three drug categories.

This study served to display the attributes of the juvenile arrestees for drug abuse violations. It was not intended for the purpose of explaining the causes behind any changes or trends for the 10-year period. More in-depth research utilizing more complex methodologies is necessary in order to determine any specific reasons for any trends in the number of arrests of juveniles for drug abuse violations.

### **Appendix**

The UCR Program's arrest data for drug abuse violations are available with breakdowns for the age and sex of the arrestees (both juveniles and adults). The races of the arrestees (both juveniles and adults) are also provided, but without specific age breakdowns. The numbers found on those UCR reports are the actual number of arrests. The FBI's staff estimates the total number of arrests for drug abuse violations for those agencies that submitted fewer than 12 months of data. For this study, the estimated number of arrests for drug abuse violations for each year and the age, sex, and racial categories were determined in the following manner. First, the estimated total of all arrests for drug abuse violations combined was determined for each year. (See the methodology for Table 29 in Appendix I.) Next, the estimated total of arrests for drug abuse violations was divided by the actual reported total for each year to arrive at a value, or multiplier, for each year. Then, the multiplier for a given year was applied to each actual value of age and sex breakdowns on the reports for that same year to arrive at the estimated value for each category.

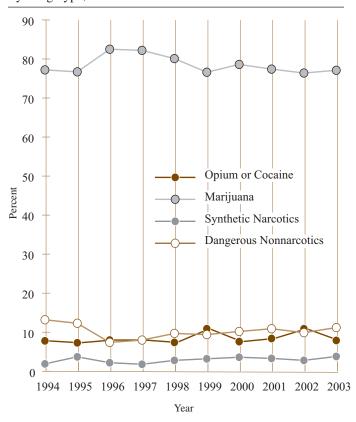

# **Example for Calculating the Estimated Number of Juveniles for Drug Abuse Violations for Age and Sex**

A = 1994 Actual Total of Arrests of Juveniles for Drug Abuse Violations by Age and Sex = 125,026

B = 1994 Actual Total of Arrests for Drug Abuse Violations by Age and Sex = 1,062,252

### Figure 5.6

Percent Distribution of the Estimated Number of Drug Arrests of American Indian or Alaskan Native Juveniles by Drug Type, 1994-2003

C = 1994 Estimated Total of Arrests for Drug Abuse Violations = 1,351,400

D = 1994 Estimated Total of Arrests of Juveniles for Drug Abuse Violations by Age and Sex = ?

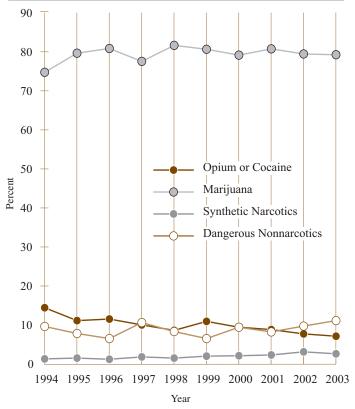

### Calculation

D = (C/B) (A) = (1,351,400/1,062,252) (125,026) = 159,058

Because providing the race of the arrestee is voluntary for law enforcement agencies that participate in the UCR Program, this information is often not included on the reports provided to the Program. Therefore, the actual arrest totals often differ from the totals on data that include age and sex information. The UCR staff used the same estimation procedure described above to estimate the total number of arrests for drug abuse violations. The Staff then used the estimated number of these arrests divided by the actual reported total of arrests for drug abuse violations by race for each year in order to determine the multiplier for estimating the arrests by race for a particular year. This second multiplier was then applied to the actual value in each racial category to determine the

### Figure 5.7

Percent Distribution of the Estimated Number of Drug Arrests of Asian or Pacific Islander Juveniles by Drug Type, 1994-2003

estimated number of arrests for drug abuse violations for a given year by race. These new (estimated) values were used to produce the tables and charts in this study.

# **Example for Calculating the Estimated Number of Juveniles for Drug Abuse Violations for Race**

A = 1994 Actual Total of Arrests of Juveniles for Drug Abuse Violations by Race = 124,931

B = 1994 Actual Total of Arrests for Drug Abuse Violations by Race = 1,061,563

C = 1994 Estimated Total of Arrests for Drug Abuse Violations = 1,351,400

D = 1994 Estimated Total of Arrests of Juveniles for Drug Abuse Violations by Race = ?

### Calculation

D = (C/B) (A) = (1,351,400/1,061,563) (124,931) = 159,041

# **Infant Victims: An Exploratory Study**

Utterly dependent on adults, infants are some of the most vulnerable individuals in our society. Despite the fact that society entrusts them to the care of adults, infants are occasionally the target of violence; they can also be incidental victims when violence occurs between other persons. This study explores the characteristics of and circumstances surrounding these criminal acts. It also includes an analysis of incidents indicating that additional victims are sometimes harmed during crimes of infant victimization.

This study uses data reported to the Uniform Crime Reporting (UCR) Program through the National Incident-Based Reporting System (NIBRS). Although not nationally representative at this time, NIBRS is one of the few sources of information on the victimization of young children and especially infants. It also provides a higher level of detail than is presently available in the

UCR Summary reporting system, which presents summarized tallies of crimes. Through NIBRS, law enforcement agencies report incident-specific information. This level of detail enables crime analysts to investigate not only the intricate relationships between victim and offender but also the correlations between these relationships and offense information. However, NIBRS implementation by law enforcement nationwide is still incomplete, thus readers should use caution in generalizing the findings of this study to the Nation as a whole.

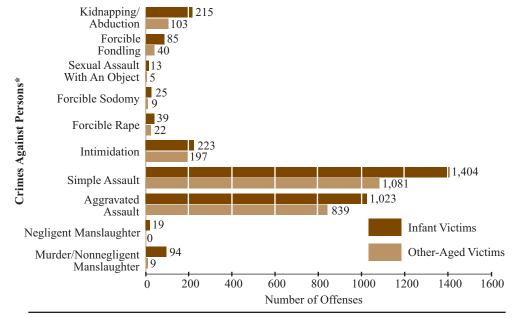

The NIBRS data used in this study are from the years 2001 through 2003 and reflect, on average, 16.7 percent of the crimes reported to the FBI overall. This study focuses on offense types classified as crimes against persons, excluding crimes that involve nonforcible sex. The nonforcible sex offenses of statutory rape and incest<sup>1</sup> require, by definition, some degree of consent; since

infants are incapable of consent, such offenses are excluded. The category of crimes against persons includes murder and nonnegligent manslaughter, negligent manslaughter, aggravated assault, simple assault, intimidation, forcible rape, forcible sodomy, sexual assault with an object, forcible fondling, and kidnapping/abduction.

In order to help detect underlying patterns, this study applies a variety of approaches and designations to the disaggregated data. For certain parts of the study, victims are classified into one of four age groups. Victims under 1 year old are grouped together as infants, and victims aged 1 through 10 years old are categorized as young children. Victims aged 11 through 17 years old are classified as preadolescent and adolescent minors; victims who are 18 years old and older are classified as adults.

Although NIBRS has the capability to collect crime data according to 20

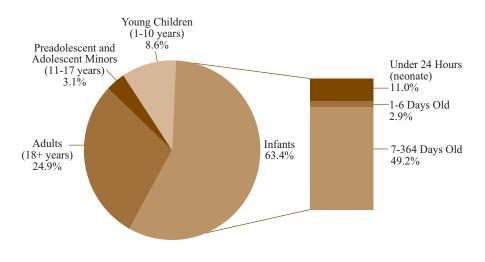

Figure 5.8

<sup>\*</sup>Listed according to NIBRS offense categories

Figure 5.9

### **Age of Victims Present at Infant Victimizations**

Note: Distribution based on 7,843 total victims

distinct types of location, for this study location types are reclassified into categories that reflect the possibility that someone unrelated to the offender might observe the crime. Areas considered private (or secluded) include residence/home, hotel/motel/etc., and jail/prison. With the exception of location types that are considered to be "other or unknown," the remaining location types are considered public (or within view of the public).

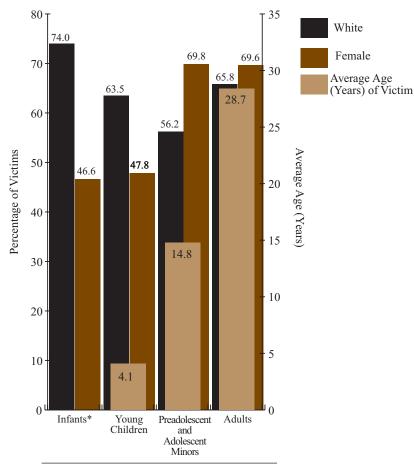

Figure 5.8 shows a breakdown of offenses that occurred against both the infant specifically and other victims that were present at the infant's victimization and were at least 1 year old. The breakdowns illustrate the number and distribution of offenses. In the case of crimes against persons, the UCR Program counts one offense for every victim in an incident, thus creating a unique statistical connection between the offense and the victim. Most often, the offense committed against these victims is simple assault. From 2001 through 2003, law enforcement agencies reported 1,404 simple assaults committed against infants and

1,081 simple assaults committed against other victims present at the infant's victimization. The next most common offense was that of aggravated assault (1,023 committed against infants; 839 committed against other victims).

During the time frame of this study (2001-2003), law enforcement agencies reported to the FBI 4,973 infant victims in the category of crimes against persons. This number represents 63.4 percent of the total number of victims in these incidents. (See Figure 5.9.) Even though the infants themselves constitute the majority of victims in the universe of incidents of interpersonal crime that include an infant victim, sometimes additional victims of other age groups are present

Figure 5.10

### Characteristics of Victims, by Age Group of Victim

<sup>\*</sup>The UCR Program defines infants as less than 1 year old.

at the infant's victimization. Concurrent with the infant victimizations, there were 2,870 victims of other ages. Adults make up the preponderance of these other victims (24.9 percent), followed by young children (8.6 percent) and preadolescent and adolescent minors (3.1 percent). Additionally, the age breakdown of the infant victims reveals noteworthy patterns. As would be expected, the majority of infant victims are in the age range of 7 to 364 days old (49.2 percent of the total). However, the age group having the second-highest risk is made up of neonates<sup>2</sup> (11.3 percent of the total) with those infants 1 to 6 days old having the least risk (2.9 percent of the total).

NIBRS collects data about the characteristics of victims in terms of age, gender, and race. (See Figure 5.10.) By assigning each victim to a category by age, one can more easily distinguish any differing patterns of the characteristics among these groups.

The vast majority of infant victims are white (74.0 percent). When others are victimized along with the infant, the percentage of whites decreases. This indicates that there is a higher presence of other races in these incidents. Data about other victims present at the infant's victimization show a higher presence of minorities. In the category of infant victims and victims between the ages of 1 and 10, there were approxi-

mately the same proportion of males and females. However, the older the associated victims are, the more likely they are to be female (69.8 percent for preadolescent and adolescent minors and 69.6 percent for adults). On average, the age data for minors victimized in these incidents show a slight bias toward younger ages. In the adult age group, the data for the average age of adult victims show a bias toward the lower end of the range of ages—as would be expected if the victims were the parents or caretakers of an infant.

NIBRS captures up to ten types of relationships between victim(s) and offender(s). These relationships reflect each unique combination of one victim and one offender within a crime incident. As a result, a victim can appear more than once in this table if more than one offender was involved in the incident. Data in Table 5.10 show the number of victims sorted by the type of victim-to-offender relationship. To facilitate the detection of patterns relating to each age group, this study uses aggregate categories that are more general than the categories coded in NIBRS.

Infant victims and the young children present at an infant's victimization are usually dependents in the household of the offender. The next-most-often relationship is when these victims are otherwise acquainted but not related to the offender. Older victims (i.e., preadolescent and adolescent minors) are more likely to be victimized by people acquainted with them rather than by individuals related to them. Finally, adult victims are usually an intimate partner of the offender. This result is consistent with the finding that infant and young child victims are dependents of the household—as would be expected in a domestic situation.

One of the advantages of gathering crime data through NIBRS is the ability to capture information on more than one type of offense that may occur in the course of a crime incident, information on multiple victims, and information on multiple offenders. NIBRS can record up to 10 different types of offenses, 999 victims, and 99 offenders. A simple analysis of the number of types of offenses and the number of victims and offenders reported within an incident showed noteworthy contrasts between those incidents with infant victims and those without. As shown in Table 5.11, incidents with infant victimizations are slightly more likely to have multiple offense types (11.9 percent compared with 8.1 percent) and multiple offenders (14.6 percent compared to 11.6 percent). Based on the data, incidents involving infants may have a slightly higher probability of involving more than one assailant or more than

#### Crime Location

Public or "Other/Unknown"

Note: Ranges reflect rounding to nearest whole number.

one type of offense. However, the contrast is more striking for the number of victims. The data show that 45.5 percent of incidents with infant victimization have more than one victim; in contrast, 13.9 percent of incidents with no infant victimization have multiple victims. This finding suggests that it is less common for the infant victim to be alone with his or her offender, regardless of whether the infant is the intended victim.

The NIBRS incident reports capture up to five types of injuries for each victim. For the present study, this data is grouped as follows: None, Apparent Minor Injury, Major Injury, and Multiple Injuries. In Figure 5.11, the category of multiple injuries reflects the number

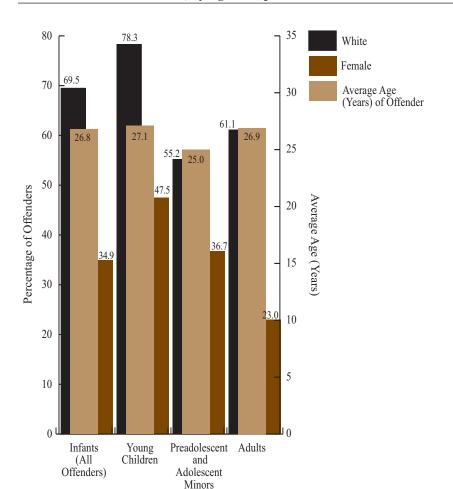

of victims in incidents for which law enforcement reported more than one type of injury. The figure shows the number of victims by the type of injury sustained for each of the age groups. The data show that although both adults (41.3 percent) and infants (46.3 percent) suffered an injury in 44.6 percent of the incidents, victims in the remaining age groups were less likely overall to receive an injury. Young children sustained no injury in 84.9 percent of the incidents, and preadolescent and adolescent minors sustained no injury in 68.6 percent of the incidents. The patterns of the injuries sustained within each age group demonstrate the particular vulnerability of infant victims. Infants had a higher

incidence of multiple injuries and major injury than did other victims.

NIBRS captures up to three types of weapons associated with certain offenses. Table 5.12 shows the number of offenses reported wherein a certain type of weapon was used, and the number is further broken out by infant and all others. For the purposes of this table, the "multiple weapons" category reflects the number of offenses in which law enforcement reported more than one type of weapon. The preponderance of offenses committed against both infants and other-aged victims fell under the "personal weapons" category. Firearms were more likely to be used in offenses involving other-aged victims

Figure 5.13

## Characteristics of Offenders, by Age Group of Victim

in private locations. One possible explanation for this pattern is that during certain times in private locations victims have a lack of effective "guardianship" or witnesses who might act as a deterrent. Additionally, these incidents do not appear to have a distinct pattern throughout the day except for some minor peaking at stressful times: at the dinner-hour, when adults arrive home from work, or Monday morning, when adults leave the house to go to work.

Incidents that occurred under public view and in other/unknown locations were typically at times when people are out of the house on the weekends, in the late afternoon, or in the early evening. (See Figure 5.12.)

NIBRS collects data about the characteristics of offenders in terms of age, gender, and race. By assigning each offender to a category by age of victim, one can more easily distinguish any differing patterns of the characteristics among these groups.

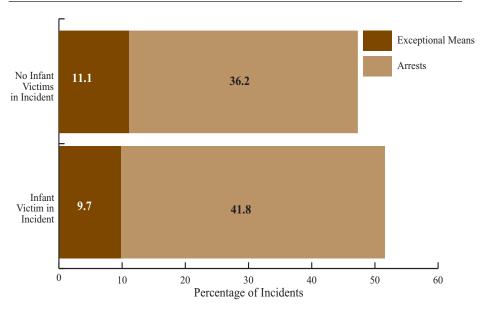

In contrast to characteristics of victims in these incidents, offenders are less often female (34.9 percent) but similar in terms of race (69.5 percent

rather than infants. Multiple weapons, though rarely used, were more likely to be recorded by law enforcement for aggravated assault (6.6 percent within the offense category) than for any other offense (2.4 percent overall).

For this study, the location types collected in NIBRS were regrouped to reflect whether the location would be considered private (or secluded) or would be considered public (or within view of the public). (For the purpose of this study, the location category other/unknown was grouped with public locations.) The incidents were then charted by time of day and day of the week in order to assess any patterns of occurrence.

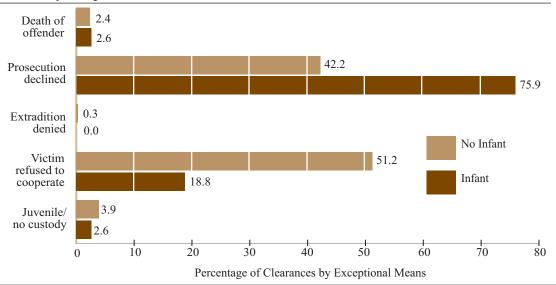

The preponderance of the incidents of infant victimizations occurred

Figure 5.14
Percentage of Incidents Cleared

## **Clearances by Exceptional Means**

Note: Figure 5.15 reflects the distribution of circumstances for reported exceptional clearances. Because the reporting of clearances occurs for the entire incident, the percentages are based upon incidents that either had no infant victims or had at least one infant victim (and possibly additional victims).

white). Among all incidents of infant victimization within this study, the offenders are mostly in their mid- to late twenties. (See Figure 5.13.) While those basic characteristics hold true for the subgroups of incidents with additional victims, the chances of the offender being female show subtle shifts depending upon the age group of the victim. Offenders are very often (47.5 percent) more likely to be female when the additional victims are young children and are less likely to be female when additional victims are adult or preadolescent and adolescent minor victims. There is a greater presence of minority offenders in incidents having additional older minor and adult victims. Although the average age of the offender is mostly stable across victim age groups, the average age of the offender shows a substantive difference (1.8 to 2.1 years) in incidents where the victims are in the Preadolescent and Adolescent Minors group. This finding is consistent with the lower occurrence of victimizing by family members compared with victimizing by individuals with whom the

victim is acquainted. The average age of offenders in crimes against preadolescent and adolescent minors may reflect circumstances in which offenders are closer in age to the victims themselves than in the other types of incidents.

Within the UCR Program, an incident, and subsequently any offenses within it, can be cleared by the arrest of one individual connected to it. Alternatively, it can be cleared by exceptional means when circumstances beyond the control of law enforcement prevent an arrest of a located offender from occurring. Incidents with infant victimization have a slightly higher overall clearance rate (51.5 percent) compared with incidents cleared when there were no infant victims (47.3 percent). Additionally, incidents with infant victimization are also more likely to be cleared by arrest, which may be expected since these incidents most commonly occur within a household by individuals known by or related to the victim. (See Figure 5.14.)

Law enforcement agencies report a clearance by exceptional means when

some element beyond law enforcement control prevents filing of formal charges against the offender. In such cases, the identity and location of the offender must be clearly established, and there must be enough information to support an arrest or charge. The data in Figure 5.15 show, among the circumstances that allow for an exceptional clearance in the UCR Program, the most common category for incidents with infant victimization was "prosecution declined" (75.9 percent). Whereas in those incidents without infant victimization, the most common circumstance of clearance by exceptional means involved the victim refusing to cooperate (51.2 percent).

### **Concluding Remarks**

Although data gathering through NIBRS is not implemented widely enough to support definitive statements about the characteristics of infant victimization nationwide, patterns emerge from the existing data. As might be expected, the information in NIBRS appears to support the understanding that infant

victimization is primarily a problem associated with violence in a domestic setting. The NIBRS data yield the following observations:

- The preponderance of these incidents involved some form of assault and occurred in private by individuals related to the infants victimized or in a relationship of trust with members of the household.
- Infants are rarely the solitary victim in an incident, and they and their fellow victims are usually related to the offender.
- The characteristics of infant victims reflect no particular bias in terms of race (based on racial breakdown of the general population) or gender. However, in this data set, there was a greater presence of minorities in the group of victims who were present at an infant's victimization.
- Weapons employed in infant victimization are mostly in the

- category of "personal weapons," and infants are far more likely to sustain serious or multiple injuries than are the other-aged victims present at the same incident.
- The typical offender is a white male in his mid- to late twenties. However, the data suggest that the offender is more likely to be female when additional victims are involved in the incident.
- In incidents with infant victimization, there is a higher probability of arrest compared with incidents having no infant victimization.
   This makes sense given the fact that in the majority of cases, the victims know their offenders in incidents with infant victimization. However, in times when arrest of a located offender is not possible, prosecution is declined in a significant proportion of incidents.

While it bears repeating that these findings do not necessarily reflect

statistics for the Nation as a whole, they do reflect the difficulties associated with an effective law enforcement response to this problem. When incidents occur in private and the witnesses to such crimes either cannot speak for themselves or may be reluctant to speak because of a sense of loyalty to friends and family, it can be difficult for law enforcement to ascertain sufficient information during an investigation to have a case accepted for prosecution.

#### **Endnotes**

<sup>1</sup>Although in common usage the term *incest* describes incidents of sexual abuse between a parent and his or her child, the UCR Program defines incest as "nonforcible sexual intercourse between persons who are related to each other within the degrees wherein marriage is prohibited by law." Any acts of sexual abuse that are considered nonconsensual are classified as a forcible sex offense regardless of the relationship of the victim to the offender.

<sup>2</sup>The UCR Program defines *neonates* as infants under 24 hours old and *infants* as less than 1 year old.

# **Law Enforcement Personnel**

Because of the differing service requirements and functions, care should be taken when using the data presented in this section to draw comparisons between and among the staffing levels of law enforcement agencies. What follows is not intended as recommended or preferred officer strength; the data should be viewed merely as guides.

Each year, the staff of the UCR Program ask law enforcement agencies across the United States to report the total number of sworn law enforcement officers and civilians in their agency as of October 31. This section of Crime in the United States presents that data as the number and rate of law enforcement officers and civilian employees throughout the United States. In 2004, 14,254 state, city, university and college, metropolitan and nonmetropolitan county, and other law enforcement agencies employed 675,734 sworn officers and 294,854 civilians who provided law enforcement services to more than 278 million people nationwide. (See Table 74.)

The data in this section are broken down by geographic region and division, population group, state, city, university and college, metropolitan and nonmetropolitan county, and other law enforcement agencies. (Information about geographic region and division and population group can be found in Appendix III.) The staff of the UCR Program compute the rate of sworn officers and law enforcement employees by taking the number of employees (sworn officers only or in combination with civilians), dividing by the population for which the agency provides law enforcement service, and multiplying by 1,000.

 Tables 70 and 71 present the number and rate of law enforcement personnel per 1,000 inhabitants collectively employed by agencies,

- broken down by geographic region and division by population group.
- Tables 72 and 73 provide a count of law enforcement agencies, by population group, based on the employment rate ranges for sworn officer and civilian employees per 1,000 inhabitants.
- Table 74 provides the number and percentage of male and female sworn officers and civilian employees by population group.
- Table 75 lists the percentage of full-time civilian law enforcement employees by population group.
- Table 76 breaks down by state the number of sworn law enforcement officers and civilians employed by state law enforcement agencies.
- Tables 78-80 list the number of law enforcement employees for cities, universities and colleges, and metropolitan and nonmetropolitan counties.
- Table 81 supplies employee data for those law enforcement agencies that serve this Nation's transit systems, parks and forests, schools and school districts, hospitals, etc.

The demographic traits and characteristics of a jurisdiction affect its requirements for law enforcement service. For instance, a hamlet between two large cities may require more law enforcement presence than a community of the same size that does not have a nearby urban center. A town with legal gambling may have different

law enforcement needs than one near a military base. Cities composed mostly of college students may have different law enforcement service requirements than cities whose residents are mainly retirees.

Similarly, the functions of law enforcement agencies are significantly diverse. They patrol local streets and major highways, they protect citizens in the Nation's smallest towns and largest cities, they conduct investigations on offenses around the block or around the state. State police in one area may enforce traffic laws on state highways and interstates; in another area, the state police may be responsible for investigating violent crimes. Sheriff's departments may collect tax monies, they may serve as the enforcement authority for local and state courts, or they may administer jail facilities. These duties have an impact on an agency's staffing levels.

Because of the differing service requirements and functions, care should be taken when using the data presented in this section to draw comparisons between and among the staffing levels of law enforcement agencies. What follows is not intended as recommended or preferred officer strength; the data should be viewed merely as guides. Adequate staffing levels can be determined only after careful study of the conditions that affect the service requirements in a particular jurisdiction.

#### Rate

The national rate of full-time law enforcement employees per 1,000 inhabitants remained at 3.5 in 2004, unchanged from the 2003 rate. (Based on Table 74.)

Among the Nation's four regions, law enforcement agencies in the Northeast had the highest rate of law enforcement employees, 3.5 law enforcement employees for every 1,000 inhabitants. Agencies in the South had 3.4 law enforcement employees per 1,000 inhabitants, in the Midwest, 2.7, and in the West, 2.4. (See Table 70.)

An examination of the 2004 law enforcement employee data by population group showed that in the Nation's cities collectively there were 3.0 law enforcement employees per 1,000 inhabitants. Of the population groups with the city label, cities with 10,000 or less in population had the highest rate of law enforcement employees, 4.2 per 1,000 inhabitants. Cities with 25,000 to 49,999 inhabitants and cities with 50,000 to 99,999 inhabitants had the lowest rate, 2.3 law enforcement employees per 1,000 in population. The Nation's largest cities, those with 250,000 or more inhabitants, averaged 3.8 law enforcement employees for every 1,000 inhabitants. (See Table 70.) The law enforcement agencies in the Nation's metropolitan counties averaged 4.4 employees per 1,000 inhabitants; agencies in the Nation's nonmetropolitan counties collectively reported having 4.5 law enforcement personnel for each 1,000 inhabitants. (Based on Table 74.)

### **Sworn Personnel**

The UCR Program defines law enforcement officers as individuals who ordinarily carry a firearm and a badge, have full arrest powers, and are paid from governmental funds set aside specifically for sworn law enforcement representatives.

An analysis of the 2004 data concerning only sworn law enforcement personnel showed that by region, law enforcement agencies in the cities in the Northeast had the highest rate of sworn officers, 2.7, per 1,000 inhabitants. The rate of law enforcement officers for each 1,000 in population was 2.6 in the South, 2.2 in the Midwest, and 1.7 in the West. (See Table 71.)

By population group, there were 2.3 sworn officers for each 1,000 resident population in the Nation's cities collectively. That rate was unchanged from the 2003 data. Of the population groups labeled city, the cities of 10,000 or less in population had the highest rate, 3.3 officers per 1,000 inhabitants in 2004. Two city population groups, those with populations from 25,000 to 49,999 and those with 50,000 to 99,999 had the lowest rate, 1.8 officers per 1,000 inhabitants. The Nation's largest cities, those with 250,000 or more inhabitants averaged 2.8 officers per 1,000 in population. (See Table 71.) Law enforcement agencies in the Nation's metropolitan and nonmetropolitan counties averaged 2.6 and 2.7 officers, respectively, for each 1,000 in population. (Based on Table 74.)

A review by gender of the 2004 data submitted about sworn officers showed that in the Nation as well as in cities overall, 88.4 percent of law enforcement officers were male and 11.6 percent were female. The review also revealed that in the Nation's metropolitan counties, 86.7 percent of officers were male and 13.3 percent were female; in the Nation's nonmetropolitan counties, 91.9 percent of officers were male and 8.1 percent were female. (See Table 74.)

### **Civilian Employees**

Civilian employees provide a myriad of services to the law enforcement and criminal justice agencies around the United States. Among other duties, they dispatch officers, they provide administrative and recordkeeping support, and they query local, state, and national databases.

Across the United States in 2004, 30.4 percent of all law enforcement employees were civilians. Civilians comprised 23.2 percent of employees at law enforcement agencies in the Nation's cities overall. In the Nation's metropolitan counties, civilians comprised 40.3 percent of law enforcement employees; in the Nation's nonmetropolitan counties, civilians accounted for 39.7 percent. Of the civilians working in law enforcement agencies throughout the Nation, 62.1 percent were female and 37.9 percent were male. (See Tables 74 and 75.)

# Law Enforcement Officers Killed and Assaulted

In 2004, 57 law enforcement officers were feloniously slain in the line of duty during 50 incidents compared with 52 officers who were killed in 46 incidents in 2003. A breakdown of the 2004 data by region showed that 27 officers were killed in the South, 10 officers were killed in the Midwest, 9 officers were killed in the West, and 8 officers were killed in the Northeast. Also, 2 officers were slain in Puerto Rico, and 1 was slain in the U.S. Virgin Islands.

In addition, 82 officers died in line-of-duty accidents in 2004 compared with 81 officers who were accidentally killed in 2003. The UCR publication *Law Enforcement Officers Killed and Assaulted* contains more extensive information regarding line-of-duty deaths and assaults on city, county, state, tribal, and federal officers.

 $<sup>^{\</sup>rm l}$  Data reported are the number of law enforcement employees for the state of New Jersey.

<sup>&</sup>lt;sup>2</sup> Data reported are the number of law enforcement employees for the state of New York.

NOTE: Caution should be used when comparing data from one state to that of another. The responsibilities of the various state police, highway patrol, and department of public safety agencies range from full law enforcement duties to only traffic patrol, which can impact both the level of employment for agencies as well as the ratio of sworn officers to civilians employed. Any valid comparison must take these factors and the other identified crime factors (see page v) into consideration.

# **SECTION VII** Appendices

# APPENDIX I – Methodology

Law enforcement agencies in 46 states and the District of Columbia voluntarily contribute crime data to the Uniform Crime Reporting (UCR) Program through their respective state UCR Program. For those states that do not have a state Program, local agencies submit crime statistics directly to the FBI, which provides continuous guidance and support to those participating agencies. The state UCR Programs function as liaisons between local agencies and the FBI. Many states have mandatory reporting requirements, and many state Programs collect data beyond those typically called for by the UCR Program to address crime problems specific to their particular jurisdiction. In most cases, these state Programs also provide direct and frequent service to their participating law enforcement agencies, make information readily available for statewide use, and help to streamline the national Program's operations.

The criteria established for state Programs ensure consistency and comparability in the data submitted to the national Program, as well as regular and timely reporting. These criteria are (1) The state Program must conform to the national UCR Program standards, definitions, and information required. (2) The state criminal justice agency must have a proven, effective, statewide Program and have instituted acceptable quality control procedures. (3) The state crime reporting must cover a percentage of the population at least equal to that covered by the national UCR Program through direct reporting. (4) The state Program must have adequate field staff assigned to conduct audits and to assist contributing agencies in record-keeping practices and crime-reporting procedures. (5) The state Program must furnish the FBI with all of the detailed data regularly collected by the FBI from individual agencies that report to the state Program in the form of duplicate returns, computer printouts, and/or appropriate electronic media. (6) The state Program must have the proven capability (tested over a period of time) to supply all the statistical data required in time to meet publication deadlines of the national UCR Program.

The FBI, in order to fulfill its responsibilities

in connection with the UCR Program, continues to edit and review individual agency reports for both completeness and quality. Members of the national Program's staff directly contact individual contributors within the state, as necessary, in connection with crime-reporting matters, and coordinate such contact with the UCR Program. On request, staff members conduct training programs within the state on law enforcement record-keeping and crime-reporting procedures. Following audit standards established by the federal government, the FBI conducts an audit of each state's UCR data collection procedures once every three years. Should circumstances develop whereby the state Program does not comply with the aforementioned requirements, the national Program may institute a direct collection of Uniform Crime Reports from law enforcement agencies within the state.

# **Reporting Procedures**

Based on records of all reports of crime received from victims, officers who discover infractions, or other sources, law enforcement agencies tabulate the number of Part I offenses brought to their attention and submit them monthly to the FBI either directly or through their state UCR Program. Part I offenses include murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny-theft, motor vehicle theft, and arson.

Law enforcement's monthly submission to the FBI includes other important information. When, through investigation, an agency determines that complaints of crimes are unfounded or false, the agency eliminates that offense from its crime tally through an entry on the monthly report. The report also provides the total number of actual Part I offenses, the number of offenses cleared, and the number of clearances that involve only offenders under the age of 18. (Law enforcement can clear crimes in one of two ways: by the arrest of at least one person who is charged and turned over to the court for prosecution or by exceptional means—when some element beyond law enforcement's control precludes the arrest of a known offender.) Law

enforcement agencies also submit monthly to the FBI the value of property stolen and recovered in connection with the offenses and detailed information pertaining to criminal homicide and arson.

In addition to reporting Part I offenses, law enforcement agencies provide to the UCR Program monthly data on persons arrested for all crimes except traffic violations. These arrest data include the age, sex, and race of arrestees for both Part I and Part II offenses. Part II offenses encompass all crimes, except traffic violations, that are not classified as Part I offenses.

The UCR Program also requires law enforcement agencies to report data regarding law enforcement employees. In addition to reporting monthly data on law enforcement officers killed or assaulted, agencies report yearly on the number of full-time sworn and civilian law enforcement personnel employed as of October 31.

At the end of each quarter, law enforcement agencies report summarized data on hate crimes, i.e., specific offenses that were motivated by an offender's bias against the perceived race, religion, ethnic origin, sexual orientation, or physical or mental disability of the victim. Those agencies participating in the UCR Program's National Incident-Base Reporting System (NIBRS) submit hate crime data monthly.

# **Editing Procedures**

The UCR Program thoroughly examines each report it receives for arithmetical accuracy and for deviations in crime data from month to month and from present to past years that may indicate errors. The UCR staff members compare an agency's monthly reports with the agency's previous submissions and with those from similar agencies to identify any unusual fluctuations in an agency's crime count. Large variations in crime levels may indicate modified records procedures, incomplete reporting, or changes in the jurisdiction's geopolitical structure.

Data reliability is a high priority of the national UCR Program, which brings any deviations or arithmetical adjustments to the attention of state UCR Programs or the submitting agency. Typically, staff members study the monthly reports

to evaluate periodic trends prepared for individual reporting units. Any significant increase or decrease becomes the subject of a special inquiry. Changes in crime reporting procedures or annexations that affect an agency's jurisdiction can influence the level of reported crime. When this occurs, the UCR Program excludes the figures for specific crime categories or totals, if necessary, from the trend tabulations.

To assist contributors in complying with UCR standards, the national UCR Program provides training seminars and instructional materials on crime reporting procedures. Throughout the country, the national Program maintains liaison with state Programs and law enforcement personnel and holds training sessions to explain the purpose of the Program, the rules of uniform classification and scoring, and the methods of assembling the information for reporting. When an individual agency has specific problems in compiling its crime statistics and its remedial efforts are unsuccessful, personnel from the FBI's Criminal Justice Information Services Division may visit the contributor to aid in resolving the difficulties.

The national UCR Program publishes a *Uniform Crime Reporting Handbook* (revised 2004), which details procedures for classifying and scoring offenses and serves as the contributing agencies' basic resource for preparing reports. The national staff also produces letters to UCR contributors and UCR *State Program Bulletins* as needed. These provide policy updates and new information, as well as clarification of reporting issues.

The final responsibility for data submissions rests with the individual contributing law enforcement agency. Although the FBI makes every effort through its editing procedures, training practices, and correspondence to ensure the validity of the data it receives, the accuracy of the statistics depends primarily on the adherence of each contributor to the established standards of reporting. Deviations from these established standards that cannot be resolved by the national UCR Program may be brought to the attention of the Criminal Justice Information Systems Committees of the International Association of Chiefs of Police and the National Sheriffs' Association.

# **Population**

For the 2004 edition of *Crime in the United States*, the UCR Program obtained current population estimates from the U.S. Census Bureau to estimate 2004 population counts for all contributing law enforcement agencies. The U.S. Census Bureau provided revised 2003 state/national population estimates and the 2004 state/national population estimates. Using these revised census data, the national UCR Program updated the 2003 U.S. Census Bureau city and county estimates and calculated the 2004 state growth rates. Subsequently, the Program updated the population figures for individual jurisdictions by applying the 2004 state growth rates to the updated 2003 U.S. Census Bureau data.

#### **NIBRS Conversion**

Several states provide their UCR data in the expanded NIBRS format. For presentation in this book, the NIBRS data were converted to the historical Summary UCR data. The UCR Program staff constructed the NIBRS database to allow for such conversion so that UCR's long-running time series could continue.

### **Crime Trends**

Trend statistics offer the data user an added perspective from which to study crime by showing fluctuations from year to year. Percent change tabulations in this publication are computed only for reporting agencies that provided comparable data for the periods under consideration. The Program excludes from the trend calculations all figures except those received for common months from common agencies. Also excluded are unusual fluctuations that the Program determines are the result of such variables as improved records procedures, annexations, etc.

Data users should exercise care in making any direct comparison between data in this publication and those in prior issues of *Crime in the United States*. Because of differing levels of participation from year to year and reporting problems that require the Program to estimate crime counts for certain contributors, the data are not comparable from year to year.

#### 2004 Arrest Data

Because of changes in reporting practices, arrest data for Montana are not available for 2004. The 2004 arrest data contained in this publication for Arkansas and Maine are not comparable to previous years' data. Limited arrest data were received from Illinois, Kentucky, and South Carolina. No 2004 arrest data were received from the District of Columbia's Metropolitan Police Department; the only agency (Metro Transit Police) in the District of Columbia for which 12 months of arrest data were received have no attributable population. Twelve months of arrest figures for the New York City Police Department and law enforcement agencies in Florida were not available to be included in the arrest tables in this book. However, arrest totals for these areas were estimated by the national UCR Program and were included in Table 29, "Estimated Number of Arrests, United States, 2004."

#### **Offense Estimation**

Tables 1 through 5 and Table 7 of this publication contain statistics for the entire United States. Because not all law enforcement agencies provide data for complete reporting periods, the UCR Program includes estimated crime numbers in these presentations. The Program estimates offenses that occur within each of three areas: Metropolitan Statistical Areas (MSAs), cities outside MSAs, and nonmetropolitan counties. The national Program computes estimates by using the known crime figures of similar areas within a state and assigning the same proportion of crime volumes to nonreporting agencies or agencies with missing data. The estimation process considers the following: population size of agency; type of jurisdiction, e.g., police department versus sheriff's office; and geographic location.

Various circumstances require the national Program to estimate offense totals for certain states. For example, some states do not provide forcible rape figures in accordance with UCR guidelines, or reporting problems at the state level have, at times, resulted in no usable data. In addition, the conversion of NIBRS data to Summary data has contributed to the need for unique estimation procedures. A summary of state-specific and offense-specific estimation procedures follows.

Year	State(s)	Reason for Estimation	Estimation Method
1985	Illinois	The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to the state.
1986	Illinois	The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to the state.
1987	Illinois	The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to the state.
1988	Illinois	The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to the state.
	Florida, Kentucky	Reporting problems at the state level resulted in no usable data.	State totals were estimated by updating previous valid annual totals for individual jurisdictions, subdivided by population group. Percent changes for each offense within each population group of the geographic divisions in which the states reside were applied to the previous valid annual totals. The state totals were compiled from the sums of the population group estimates.
1989	Illinois	The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to the state.
1990	Illinois	The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to the state.
1991	Illinois	The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to the state.
	Iowa	NIBRS conversion efforts resulted in estimation for Iowa.	State totals were estimated by updating previous valid annual totals for individual jurisdictions, subdivided by population group. Percent changes for each offense within each population group of the West North Central Division were applied to the previous valid annual totals. The state totals were compiled from the sums of the population group estimates.
1992	Illinois	The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to the state.

Year	State(s)	Reason for Estimation	Estimation Method
1993	Illinois	NIBRS conversion efforts resulted in estimation for Illinois.	Since valid annual totals were available for approximately 60 Illinois agencies, those counts were maintained. The counts for the remaining jurisdictions were replaced with the most recent valid annual totals or were generated using standard estimation procedures. The results of all sources were then combined to arrive at the 1993 state total for Illinois.
		The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to the state.
	Kansas	NIBRS conversion efforts resulted in estimation for Kansas.	State totals were estimated by updating previous valid annual totals for individual jurisdictions, subdivided by population group. Percent changes for each offense within each population group of the West North Central Division were applied to the previous valid annual totals. The state totals were compiled from the sums of the population group estimates.
	Michigan, Minnesota	The state UCR Programs were unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to each state.
1994	Illinois	NIBRS conversion efforts resulted in estimation for Illinois.	Illinois totals were generated using only the valid crime rates for the East North Central Division. Within each population group, the state's offense totals were estimated based on the rate per 100,000 inhabitants within the remainder of the division.
		The state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	The rape totals were estimated using national rates per 100,000 inhabitants within the eight population groups and assigning the forcible rape volumes proportionally to the state.
	Kansas	NIBRS conversion efforts resulted in estimation for Kansas.	State totals were generated using only the valid crimes rates for the West North Central Division. Within each population group, the state's offense totals were estimated based on the rate per 100,000 inhabitants within the remainder of the division.
	Montana	The state UCR Program was unable to provide complete 1994 offense figures in accordance with UCR guidelines.	State totals were estimated by updating previous valid annual totals for individual jurisdictions, subdivided by population group. Percent changes for each offense within each population group of the Mountain Division were applied to the previous valid annual totals. The state totals were compiled from the sums of the population group estimates.
1995	Kansas	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	The state UCR Program was able to provide valid 1994 state totals which were then updated using 1995 crime trends for the West North Central Division.

Year	State(s)	Reason for Estimation	Estimation Method
	Illinois	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	Valid Crime Index (Part I) counts were available for most of the largest cities (100,000 and over in population). For other agencies, the only available counts generated by the Illinois State Program were state totals based upon an incident-level system without indication of multiple offenses recorded within single incidents. Therefore, the UCR Hierarchy Rule could not be applied in order to convert the state's data to Summary data. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the Illinois State Program's state totals (which were inflated because of the nonapplication of the Hierarchy Rule) were reduced by the proportion of multiple offenses reported within single incidents in the NIBRS database. Valid totals for the large cities were excluded from the reduction process.
	Montana	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	State estimates were computed by updating the previous valid annual totals using the 1994 versus 1995 percent changes for the Mountain Division.
1996	Florida	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	The state UCR Program was able to provide an aggregated state total; data received from 94 individual Florida agencies are shown in the 1996 jurisdictional figures presented in Tables 8 through 11.
	Illinois	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	Valid Crime Index (Part I) counts were available for most of the largest cities (100,000 and over in population). For other agencies, the only available counts generated by the Illinois State Program were state totals based upon an incident-level system without indication of multiple offenses recorded within single incidents. Therefore, the UCR Hierarchy Rule could not be applied in order to convert the state's data to Summary format. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the Illinois State Program's state totals (which were inflated because of the nonapplication of the Hierarchy Rule) were reduced by the proportion of multiple offenses reported within single incidents in the NIBRS database. Valid totals for the large cities were excluded from the reduction process.
	Kansas	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	The Kansas state estimate was extrapolated from 1996 January-June state totals provided by the Kansas State UCR Program.
	Kentucky, Montana	The state UCR Programs were unable to provide complete offense figures in accordance with UCR guidelines.	The 1995 and 1996 percent changes within each geographic division were applied to valid 1995 state totals to generate 1996 state totals.

Year	State(s)	Reason for Estimation	Estimation Method
1997	Illinois	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	Valid Crime Index (Part I) counts were available for most of the largest cities (100,000 and over in population). For other agencies, the only available counts generated by the Illinois State Program were state totals based upon an incident-level system without indication of multiple offenses recorded within single incidents. Therefore, the UCR Hierarchy Rule could not be applied in order to convert the state's data to Summary format. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the Illinois State Program's state totals (which were inflated because of the nonapplication of the Hierarchy Rule) were reduced by the proportion of multiple offenses reported within single incidents in the NIBRS database. Valid totals for the large cities were excluded from the reduction process.
	Kansas	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	The Kansas state estimate was extrapolated from 1996 January-June state totals provided by the Kansas State UCR Program.
	Kentucky, Montana, New Hampshire, Vermont	The state UCR Programs were unable to provide complete offense figures in accordance with UCR guidelines.	The 1996 and 1997 percent changes registered for each geographic division in which the states of Kentucky, Montana, New Hampshire, and Vermont are categorized were applied to valid 1996 state totals to effect 1997 state totals.
1998	Delaware	The state UCR Program was unable to provide forcible rape figures in accordance with national UCR guidelines.	The 1998 forcible rape total for Delaware was estimated by reducing the number of reported offenses by the proportion of male forcible rape victims statewide.
	Illinois	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	Valid Crime Index (Part I) counts were available for most of the largest cities (100,000 and over in population). For other agencies, the only available counts generated by the Illinois State Program were state totals based upon an incident-level system without indication of multiple offenses recorded within single incidents. Therefore, the UCR Hierarchy Rule could not be applied in order to convert the state's data to Summary format. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the Illinois State Program's state totals (which were inflated because of the nonapplication of the Hierarchy Rule) were reduced by the proportion of multiple offenses reported within single incidents in the NIBRS database. Valid totals for the large cities were excluded from the reduction process.
	Kansas	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	To arrive at 1998 estimates, 1997 state totals supplied by the Kansas State UCR Program were updated using 1998 crime trends for the West North Central Division.
	Kentucky, Montana, New Hampshire, Wisconsin	The state UCR Programs were unable to provide complete offense figures in accordance with UCR guidelines.	State totals were estimated by using 1997 figures for the nonreporting areas and applying 1997 versus 1998 percentage changes for the division in which each state is located. The estimates for the nonreporting areas were then increased by any actual 1998 crime counts received.

Year	State(s)	Reason for Estimation	Estimation Method
1999	Illinois	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	Valid Crime Index (Part I) counts were available for most of the largest cities (100,000 and over in population). For other agencies, the only available counts generated by the Illinois State Program were state totals based upon an incident-level system without indication of multiple offenses recorded within single incidents. Therefore, the UCR Hierarchy Rule could not be applied in order to convert the state's data to Summary format. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the Illinois State Program's state totals (which were inflated because of the nonapplication of the Hierarchy Rule) were reduced by the proportion of multiple offenses reported within single incidents in the NIBRS database. Valid totals for the large cities were excluded from the reduction process.
	Kansas, Kentucky, Montana	The state UCR Programs were unable to provide complete offense figures in accordance with UCR guidelines.	To arrive at 1999 estimates for Kansas, Kentucky, and Montana, 1998 state totals supplied by each state's UCR Program were updated using 1999 crime trends for the divisions in which each state is located.
	Maine	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	The Maine Department of Public Safety forwarded monthly January through October crime counts for each law enforcement contributor; since 12 months of data were not received, the national Program estimated for the missing data following standard estimation procedures to arrive at a 1999 state total.
	New Hampshire	The state UCR Program was unable to provide complete 1999 offense figures in accordance with UCR guidelines.	The state total for New Hampshire was estimated by using the 1998 figures for the 1999 nonreporting areas and applying the 2-year percent change for the New England Division.
2000	Illinois	The state UCR Programs were unable to provide complete offense figures or forcible rape figures in accordance with UCR guidelines.	Valid Crime Index (Part I) counts were available for most of the largest cities (100,000 and over in population). For other agencies, the only available counts generated by the Illinois State Program were state totals based upon an incident-level system without indication of multiple offenses recorded within single incidents. Therefore, the UCR Hierarchy Rule could not be applied in order to convert the state's data to Summary format. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the Illinois State Program's state totals (which were inflated because of the nonapplication of the Hierarchy Rule) were reduced by the proportion of multiple offenses reported within single incidents in the NIBRS database. Valid totals for the large cities were excluded from the reduction process.
	Kansas	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	To arrive at 2000 estimates for Kansas, 1999 state estimates were updated using 2000 crime trends for the West North Central Division.
	Kentucky, Montana	The state UCR Programs were unable to provide complete offense figures in accordance with UCR guidelines.	To arrive at 2000 estimates for Kentucky and Montana, 1999 state totals supplied by each state's UCR Program were updated using 2000 crime trends for the divisions in which each state is located.

Year	State(s)	Reason for Estimation	Estimation Method
2001	Illinois	The state UCR Program submitted complete data for only seven agencies within the state. Additionally, the state UCR Program was unable to provide forcible rape figures in accordance with UCR guidelines.	Valid Crime Index (Part I) counts were available for most of the largest cities (100,000 and over in population). For other agencies, the only available counts were generated without application of the UCR Hierarchy Rule. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the total supplied by the Illinois State Program (which was inflated because of the nonapplication of the Hierarchy Rule) was reduced by the proportion of multiple offenses reported within single incidents in the available NIBRS data. Valid totals for the large cities were excluded from the reduction process.
	Kentucky	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	To arrive at the 2001 estimate for Kentucky, the 2000 state estimates were updated using 2001 crime trends reported for the East South Central Division.
2002	Illinois	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	Valid Crime Index (Part I) counts were only available for most of the largest cities (100,000 and over in population). For other agencies, the only available counts generated by the Illinois State Program were state totals based upon an incident-level system without indication of multiple offenses recorded within single incidents. Therefore, the UCR Hierarchy Rule could not be applied in order to convert the state's data to Summary format. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the Illinois State Program's state totals (which were inflated because of the nonapplication of the Hierarchy Rule) were reduced by the proportion of multiple offenses reported within single incidents in the NIBRS database. Valid totals for the large cities were excluded from the reduction process.
	Kentucky	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	To obtain the 2002 state crime count, the FBI contacted the state UCR Program, and the state agency was able to provide their latest state total, 2000. Therefore, the 2001 state estimate was updated for inclusion in the 2002 edition of <i>Crime in the United States</i> by using the 2001 crime trends for the division in which the state is located. To derive the 2002 state estimate, the 2002 crime trends for the division were applied to the adjusted 2001 state estimate.
2003	Illinois	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	Valid Part I counts were available only for most of the largest cities (100,000 and over in population). For other agencies, the only available counts generated by the Illinois State Program were state totals based upon an incident-level system without indication of multiple offenses recorded within single incidents. Therefore, the UCR Hierarchy Rule could not be applied in order to convert the state's data to Summary format. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the Illinois State Program's state totals (which were inflated because of the nonapplication of the Hierarchy Rule) were reduced by the proportion of multiple offenses reported within single incidents in the NIBRS database. Valid totals for the large cities were excluded from the reduction process.

Year	State(s)	Reason for Estimation	Estimation Method
	Kentucky	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	To obtain the 2003 estimate, the 2003 crime trend for the East South Central Division was applied to an adjusted 2002 state estimate. The 2002 state count was reestimated by applying the 2002 crime trend for the East South Central Division using a more current figure, 2001 state totals, provided by the state UCR Program. The adjusted 2002 estimate differs from the figure published in the 2002 edition of <i>Crime in the United States</i> which was originally estimated using 2002 state totals.
2004	Illinois	The state UCR Program was unable to provide complete offense figures in accordance with UCR guidelines.	Valid Part I counts were available only for agencies in the cities 100,000 and over in population. For other agencies, the only available counts generated by the Illinois State Program were totals based upon an incident-level system without indication of multiple offenses recorded within single incidents. Therefore, the UCR Hierarchy Rule could not be applied in order to convert the state's data to Summary format. (The Hierarchy Rule requires that only the most serious offense in a multiple-offense criminal incident is counted.) To arrive at a comparable state estimate to be included in national compilations, the Illinois State Program's totals (which were inflated because of the nonapplication of the Hierarchy Rule) were reduced by the proportion of multiple offenses reported within single incidents in the NIBRS database. Valid totals for the large cities were excluded from the reduction process.

### **Table Methodology**

The tables published in this report are based upon varying levels of data submissions. For example, some participating agencies may submit data for some but not all months of the reporting year. Using well-established procedures, the FBI estimates missing months of data for agencies with partial reports and then aggregates these estimates to determine the number of offenses for the total U.S. population. Tables 1–7 and 23 present these approximations. In addition, various circumstances require the FBI to estimate offense totals from time to time for some states. (For an explanation of the estimation procedures applied to particular states during

specific reporting years, see the Offense Estimation section of this appendix.)

To be included in Tables 8–11 and 21–22, which provide statistics for specific jurisdictions, agencies must submit 12 months of complete data prior to the FBI's established deadlines. To be included in Table 20, agencies must submit Supplementary Homicide Reports (SHRs). Each of the remaining tables provides the number of reporting agencies (data source) and the total population covered by their collective jurisdictions.

The tabular presentation that follows briefly describes the data sources and the methods used to construct Tables 1-69.

(1) Table	(2) Database	(3) Table Construction	(4) General Comments
UCR Program (including those than 12 months of data). Crime Nation include estimated offens arson) for agencies submitting I	All law enforcement agencies participating in the UCR Program (including those submitting less	The 2004 statistics are consistent with those published in Table 2.	Represents an estimation of reported crime for the Nation from 1985 to 2004.
	than 12 months of data). Crime statistics for the Nation include estimated offense totals (except arson) for agencies submitting less than 12 months of offense reports for each year.	• Prior to publication of this book, the FBI reestimated the state offense totals published in the previous edition of <i>Crime in the United States</i> to reflect data received after its publication. Because of this, the national totals for 2003 may have been adjusted.	The UCR Program does not have sufficient data to estimate arson offenses.
		Population statistics represent the Census Bureau's July 1 provisional estimations for each year except 1990 and 2000, which are the decennial census years. (See the Population section in this appendix.)	
2	All law enforcement agencies participating in the UCR Program (including those submitting less than 12 months of data). Crime statistics	• The FBI estimates statistics for community types by aggregating the individual state statistics as shown in Table 5.	<ul> <li>Represents an estimation of reported crime in 2004 for the:</li> <li>Nation</li> </ul>
	for the Nation and for community types include estimated offense totals (except arson) for agencies submitting less than 12 months of offense reports for each year.	Population estimates for 2004 are based on the percent change in state population from the Census Bureau's 2003 revised estimates and 2004 provisional estimates. # APPENDIX II - Offenses in Uniform Crime Reporting

The Uniform Crime Reporting (UCR) Program divides offenses into two groups, Part I and Part II crimes. Each month, contributing agencies submit information on the number of Part I offenses known to law enforcement; those offenses cleared by arrest or exceptional means; and the age, sex, and race of persons arrested for each of the offenses. Contributors provide only arrest data for Part II offenses.

The UCR Program collects data about **Part I** offenses in order to measure the level and scope of crime occurring throughout the Nation. The Program's founders chose these offenses because they are serious crimes, they occur with regularity in all areas of the country, and they are likely to be reported to police. The **Part I** offenses are:

Criminal homicide—a.) Murder and non-negligent manslaughter: the willful (nonnegligent) killing of one human being by another. Deaths caused by negligence, attempts to kill, assaults to kill, suicides, and accidental deaths are excluded. The Program classifies justifiable homicides separately and limits the definition to: (1) the killing of a felon by a law enforcement officer in the line of duty; or (2) the killing of a felon, during the commission of a felony, by a private citizen.
b.) Manslaughter by negligence: the killing of

Forcible rape—The carnal knowledge of a female forcibly and against her will. Rapes by force and attempts or assaults to rape, regardless of the age of the victim, are included. Statutory offenses (no force used—victim under age of consent) are excluded.

another person through gross negligence. Traffic

fatalities are excluded.

**Robbery**—The taking or attempted taking of anything of value from the care, custody, or control of a person or persons by force or threat of force or violence and/or by putting the victim in fear.

Aggravated assault—An unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault usually is accompanied by the use of a weapon or by means likely to produce death or great bodily harm. Simple assaults are excluded.

**Burglary (breaking or entering)**—The unlawful entry of a structure to commit a felony or a theft. Attempted forcible entry is included.

#### Larceny-theft (except motor vehicle

theft)—The unlawful taking, carrying, leading, or riding away of property from the possession or constructive possession of another. Examples are thefts of bicycles or automobile accessories, shoplifting, pocket-picking, or the stealing of any property or article that is not taken by force and violence or by fraud. Attempted larcenies are included. Embezzlement, confidence games, forgery, worthless checks, etc., are excluded.

Motor vehicle theft—The theft or attempted theft of a motor vehicle. A motor vehicle is self-propelled and runs on land surface and not on rails. Motorboats, construction equipment, airplanes, and farming equipment are specifically excluded from this category.

**Arson**—Any willful or malicious burning or attempt to burn, with or without intent to defraud, a dwelling house, public building, motor vehicle or aircraft, personal property of another, etc.

The **Part II** offenses, for which only arrest data are collected, are:

Other assaults (simple)—Assaults and attempted assaults which are not of an aggravated nature and do not result in serious injury to the victim.

Forgery and counterfeiting—The altering, copying, or imitating of something, without authority or right, with the intent to deceive or defraud by passing the copy or thing altered or imitated as that which is original or genuine; or the selling, buying, or possession of an altered, copied, or imitated thing with the intent to deceive or defraud. Attempts are included.

Fraud—The intentional perversion of the truth for the purpose of inducing another person or other entity in reliance upon it to part with something of value or to surrender a legal right. Fraudulent conversion and obtaining of money or property by false pretenses. Confidence games and bad checks, except forgeries and counterfeiting, are included.

**Embezzlement**—The unlawful misappropriation or misapplication by an offender to his/her own use or purpose of money, property, or some other thing of value entrusted to his/her care, custody, or control.

Stolen property; buying, receiving, possessing—Buying, receiving, possessing, selling, concealing, or transporting any property with the knowledge that it has been unlawfully taken, as by burglary, embezzlement, fraud, larceny, robbery, etc. Attempts are included.

Vandalism—To willfully or maliciously destroy, injure, disfigure, or deface any public or private property, real or personal, without the consent of the owner or person having custody or control by cutting, tearing, breaking, marking, painting, drawing, covering with filth, or any other such means as may be specified by local law. Attempts are included.

Weapons; carrying, possessing, etc.—The violation of laws or ordinances prohibiting the manufacture, sale, purchase, transportation, possession, concealment, or use of firearms, cutting instruments, explosives, incendiary devices, or other deadly weapons. Attempts are included.

**Prostitution and commercialized vice**—
The unlawful promotion of or participation in sexual activities for profit, including attempts.

Sex offenses (except forcible rape, prostitution, and commercialized vice)—Statutory rape, offenses against chastity, common decency, morals, and the like. Attempts are included.

Drug abuse violations—The violation of laws prohibiting the production, distribution, and/or use of certain controlled substances. The unlawful cultivation, manufacture, distribution, sale, purchase, use, possession, transportation, or importation of any controlled drug or narcotic substance. Arrests for violations of state and local laws, specifically those relating to the unlawful possession, sale, use, growing, manufacturing, and making of narcotic drugs. The following drug categories are specified: opium or cocaine and their derivatives (morphine, heroin, codeine); marijuana; synthetic narcotics—manufactured narcotics that can cause true addiction (demerol, methadone); and dangerous nonnarcotic drugs (barbiturates, benzedrine).

**Gambling**—To unlawfully bet or wager money or something else of value; assist, promote, or operate a game of chance for money or some other stake; possess or transmit wagering information; manufacture, sell, purchase, possess, or

transport gambling equipment, devices, or goods; or tamper with the outcome of a sporting event or contest to gain a gambling advantage.

Offenses against the family and children— Unlawful nonviolent acts by a family member (or legal guardian) that threaten the physical, mental, or economic well-being or morals of another family member and that are not classifiable as other offenses, such as Assault or Sex Offenses. Attempts are included.

**Driving under the influence**—Driving or operating a motor vehicle or common carrier while mentally or physically impaired as the result of consuming an alcoholic beverage or using a drug or narcotic.

**Liquor laws**—The violation of state or local laws or ordinances prohibiting the manufacture, sale, purchase, transportation, possession, or use of alcoholic beverages, not including driving under the influence and drunkenness. Federal violations are excluded.

**Drunkenness**—To drink alcoholic beverages to the extent that one's mental faculties and physical coordination are substantially impaired. Excludes driving under the influence.

**Disorderly conduct**—Any behavior that tends to disturb the public peace or decorum, scandalize the community, or shock the public sense of morality.

Vagrancy—The violation of a court order, regulation, ordinance, or law requiring the with-drawal of persons from the streets or other specified areas; prohibiting persons from remaining in an area or place in an idle or aimless manner; or prohibiting persons from going from place to place without visible means of support.

All other offenses—All violations of state or local laws not specifically identified as Part I or Part II offenses, except traffic violations.

**Suspicion**—Arrested for no specific offense and released without formal charges being placed.

Curfew and loitering laws (persons under age 18)—Violations by juveniles of local curfew or loitering ordinances.

Runaways (persons under age 18)—Limited to juveniles taken into protective custody under the provisions of local statutes.

# **APPENDIX III – Uniform Crime Reporting Area Definitions**

The Uniform Crime Reporting (UCR) Program collects crime data and supplemental information that make it possible to generate a variety of statistical compilations, including data presented by reporting areas. These statistics provide data users with the opportunity to analyze local crime data in conjunction with those for areas of similar geographic location or population size. The reporting areas that the UCR Program uses in its data breakdowns include community types, population groups, and regions and divisions. For community types, the UCR Program considers proximity to metropolitan areas using the Office of Management and Budget's (OMB) designations. (Generally, sheriffs, county police, and state police report crimes within counties but outside cities; local police report crimes within city limits.) The number of inhabitants living in a locale (based on the U.S. Census Bureau's figures) determines the population group into which the Program places it. Finally, in its geographic breakdowns, the UCR Program divides the United States into regions, divisions, and states.

## **Community Types**

In order to assist data users who wish to analyze and present uniform statistical data about metropolitan areas, the UCR Program uses reporting units that represent major population centers. The Program compiles data for these areas according to three types of communities:

#### 1. Metropolitan Statistical Areas

(MSAs)—Each MSA contains a principal city or urbanized area with a population of at least 50,000 inhabitants. MSAs include the principal city; the county in which the city is located; and other adjacent counties that have, as defined by the OMB, a high degree of economic and social integration with the principal city and county as measured through commuting. In the UCR Program, counties within an MSA are considered metropolitan. In addition, MSAs may cross state boundaries.

In 2004, approximately 82.9 percent of the Nation's population lived in MSAs. Some presentations in this publication refer to suburban areas, which are subdivisions of MSAs that exclude the

principal cities but include all the remaining cities (those having fewer than 50,000 inhabitants) and the unincorporated areas of the MSAs.

Note: Because the elements that comprise MSAs (particularly the geographic compositions), are subject to change, the Program discourages data users from making year-to-year comparisons of MSA data.

**2.** Cities Outside MSAs—Ordinarily, cities outside MSAs are incorporated areas. In 2004, cities outside MSAs made up 6.8 percent of the Nation's population.

### 3. Nonmetropolitan Counties Outside

MSAs—Most nonmetropolitan counties are composed of unincorporated areas. In 2004, 10.4 percent of the population resided in nonmetropolitan counties.

Community types are further illustrated in the following table:

Metropolitan	Nonmetropolitan
Principal Cities (50,000+ inhabitants)	Cities outside Metropolitan Areas
Suburban Cities	
Metropolitan Counties	Nonmetropolitan Counties

#### **Population Groups**

The UCR Program uses the following population group designations:

Population Group	Political Label	Population Range
I	City	250,000 and more
П	City	100,000 to 249,999
III	City	50,000 to 99,999
IV	City	25,000 to 49,999
V	City	10,000 to 24,999
VI	City <sup>1</sup>	Less than 10,000
VIII (Nonmetropolitan County)	County <sup>2</sup>	N/A
IX (Metropolitan County)	County <sup>2</sup>	N/A

<sup>&</sup>lt;sup>1</sup>Includes universities and colleges to which no population is attributed.

<sup>&</sup>lt;sup>2</sup>Includes state police to which no population is attributed.

Individual law enforcement agencies are the source of UCR data. The number of agencies included in each population group may vary from year to year because of population growth, geopolitical consolidation, municipal incorporation, etc. In noncensus years, the UCR Program estimates population figures for individual jurisdictions. (A more comprehensive explanation of population estimations can be found in Appendix I of this publication.)

The table below shows the number of agencies contributing to the UCR Program within each population group for 2004.

	Number of	
Population Group	Agencies	Population Covered
I	71	53,606,547
II	181	26,997,995
III	439	30,187,431
IV	833	28,749,035
V	1,877	29,682,903
$VI^1$	8,830	26,244,386
VIII (Nonmetropolitan County) <sup>2</sup>	3,105	30,432,316
IX (Metropolitan County) <sup>2</sup>	2,163	67,754,791
Total	17,499	293,655,404

<sup>&</sup>lt;sup>1</sup>Includes universities and colleges to which no population is attributed. <sup>2</sup>Includes state police to which no population is attributed.

#### **Regions and Divisions**

The accompanying map illustrates the four regions of the United States along with their nine subdivisions as established by the U.S. Census Bureau. The UCR Program uses this widely recognized geographic organization when compiling the Nation's crime data. The following table lists the 50 states and the District of Columbia arranged according to the regions and divisions of the United States.

### **NORTHEASTERN STATES**

# Regions and Divisions of the United States, 2004

# **APPENDIX IV – The Nation's Two Crime Measures**

The U.S. Department of Justice administers two statistical programs to measure the magnitude, nature, and impact of crime in the Nation: the Uniform Crime Reporting (UCR) Program and the National Crime Victimization Survey (NCVS). Each of these programs produces valuable information about aspects of the Nation's crime problem. Because the UCR and NCVS programs are conducted for different purposes, use different methods, and focus on somewhat different aspects of crime, the information they produce together provides a more comprehensive panorama of the Nation's crime problem than either could produce alone.

## **Uniform Crime Reports**

The FBI's UCR Program, which began in 1929, collects information on the following crimes reported to law enforcement authorities: murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny-theft, motor vehicle theft, and arson. Law enforcement agencies report arrest data for 21 additional crime categories.

The UCR Program compiles data from monthly law enforcement reports or individual crime incident records transmitted directly to the FBI or to centralized state agencies that then report to the FBI. The Program thoroughly examines each report it receives for reasonableness, accuracy, and deviations that may indicate errors. Large variations in crime levels may indicate modified records procedures, incomplete reporting, or changes in a jurisdiction's boundaries. To identify any unusual fluctuations in an agency's crime counts, the Program compares monthly reports to previous submissions of the agency and with those for similar agencies.

In 2004, law enforcement agencies active in the UCR Program represented nearly 277 million United States inhabitants–94.2 percent of the total population.

The UCR Program presents crime counts for the Nation as a whole, as well as for regions,

states, counties, cities, towns, tribal law enforcement, and colleges and universities. This permits studies among neighboring jurisdictions and among those with similar populations and other common characteristics.

The UCR Program annually publishes its findings in a preliminary release in the spring of the following calendar year, followed by a detailed annual report, *Crime in the United States*, issued in the fall. In addition to crime counts and trends, this report includes data on crimes cleared, persons arrested (age, sex, and race), law enforcement personnel (including the number of sworn officers killed or assaulted), and the characteristics of homicides (including age, sex, and race of victims and offenders; victim-offender relationships; weapons used; and circumstances surrounding the homicides). Other periodic reports are also available from the UCR Program.

The UCR Program is continually converting to the more comprehensive and detailed National Incident-Based Reporting System (NIBRS). The NIBRS provides detailed information about each criminal incident in 22 broad categories of offenses.

#### **National Crime Victimization Survey**

The Bureau of Justice Statistics' (BJS) NCVS, which began in 1973, provides a detailed picture of crime incidents, victims, and trends. After a substantial period of research, the BJS completed an intensive methodological redesign of the survey in 1993. The BJS conducted the redesign to improve the questions used to uncover crime, update the survey methods, and broaden the scope of crimes measured. The redesigned survey collects detailed information on the frequency and nature of the crimes of rape, sexual assault, personal robbery, aggravated and simple assault, household burglary, theft, and motor vehicle theft. It does not measure homicide or commercial crimes (such as burglaries of stores).

Two times a year, U.S. Bureau of the Census personnel interview household members in a nationally representative sample of approximately 43,000

households (about 76,000 people). Approximately 150,000 interviews of persons age 12 or older are conducted annually. Households stay in the sample for 3 years. New households rotate into the sample on an ongoing basis.

The NCVS collects information on crimes suffered by individuals and households, whether or not those crimes were reported to law enforcement. It estimates the proportion of each crime type reported to law enforcement, and it summarizes the reasons that victims give for reporting or not reporting.

The survey provides information about victims (age, sex, race, ethnicity, marital status, income, and educational level), offenders (sex, race, approximate age, and victim-offender relationship), and the crimes (time and place of occurrence, use of weapons, nature of injury, and economic consequences). Questions also cover the experiences of victims with the criminal justice system, self-protective measures used by victims, and possible substance abuse by offenders. Supplements are added periodically to the survey to obtain detailed information on topics like school crime.

The BJS published the first data from the redesigned NCVS in a BJS bulletin in June 1995. BJS publication of NCVS data includes *Criminal Victimization in the United States*, an annual report that covers the broad range of detailed information collected by the NCVS. The BJS publishes detailed reports on topics such as crime against women, urban crime, and gun use in crime. The National Archive of Criminal Justice Data at the University of Michigan archives the NCVS data files to enable researchers to perform independent analyses.

#### Comparing UCR and NCVS

Because the BJS designed the NCVS to complement the UCR Program, the two programs share many similarities. As much as their different collection methods permit, the two measure the same subset of serious crimes, defined alike. Both programs cover rape, robbery, aggravated assault, burglary, theft, and motor vehicle theft. Rape, robbery, theft, and motor vehicle theft are defined virtually identically by both the UCR and the NCVS.

(While rape is defined analogously, the UCR Program measures the crime against women only, and the NCVS measures it against both sexes.)

There are also significant differences between the two programs. First, the two programs were created to serve different purposes. The UCR Program's primary objective is to provide a reliable set of criminal justice statistics for law enforcement administration, operation, and management. The BJS established the NCVS to provide previously unavailable information about crime (including crime not reported to police), victims, and offenders.

Second, the two programs measure an overlapping but nonidentical set of crimes. The NCVS includes crimes both reported and not reported to law enforcement. The NCVS excludes, but the UCR includes, homicide, arson, commercial crimes, and crimes against children under age 12. The UCR captures crimes reported to law enforcement but collects only arrest data for simple assaults and sexual assaults other than forcible rape.

Third, because of methodology, the NCVS and UCR definitions of some crime differ. For example, the UCR defines burglary as the unlawful entry or attempted entry of a structure to commit a felony or theft. The NCVS, not wanting to ask victims to ascertain offender motives, defines burglary as the entry or attempted entry of a residence by a person who had no right to be there.

Fourth, for property crimes (burglary, theft, and motor vehicle theft), the two programs calculate crime rates using different bases. The UCR rates for these crimes are per capita (number of crimes per 100,000 persons), whereas the NCVS rates for these crimes are per household (number of crimes per 1,000 households). Because the number of households may not grow at the same rate each year as the total population, trend data for rates of property crimes measured by the two programs may not be comparable.

In addition, some differences in the data from the two programs may result from sampling variation in the NCVS and from estimating for nonresponse in the UCR. The BJS derives the NCVS estimates from interviewing a sample and are, therefore, subject to a margin of error. The BJS uses rigorous statistical methods to calculate

confidence intervals around all survey estimates. The BJS describes trend data in the NCVS reports as genuine only if there is at least a 90-percent certainty that the measured changes are not the result of sampling variation. The UCR Program bases its data on the actual counts of offenses reported by law enforcement agencies. In some circumstances, the UCR Program estimates its data for nonparticipating agencies or those reporting partial data.

Apparent discrepancies between statistics from the two programs can usually be accounted for by their definitional and procedural differences or resolved by comparing NCVS sampling variations (confidence intervals) of those crimes said to have been reported to police with UCR statistics.

For most types of crimes measured by both the UCR and NCVS, analysts familiar with the programs can exclude from analysis those aspects of crime not common to both. Resulting long-term trend lines can be brought into close concordance. The impact of such adjustments is most striking for robbery, burglary, and motor vehicle theft, whose definitions most closely coincide.

With robbery, the BJS bases the NCVS victimization rates only on robberies reported to the police. It is also possible to remove UCR robberies of commercial establishments such as gas stations, convenience stores, and banks from analysis. When users compare the resulting NCVS police-reported robbery rates and the UCR noncommercial robbery rates, the results reveal closely corresponding long-term trends.

Each program has unique strengths. The UCR provides a measure of the number of crimes reported to law enforcement agencies throughout the country. The UCR's Supplementary Homicide Reports provide the most reliable, timely data on the extent and nature of homicides in the Nation. The NCVS is the primary source of information on the characteristics of criminal victimization and on the number and types of crimes not reported to law enforcement authorities.

By understanding the strengths and limitations of each program, it is possible to use the UCR and NCVS to achieve a greater understanding of crime trends and the nature of crime in the United States. For example, changes in police procedures, shifting attitudes towards crime and police, and other societal changes can affect the extent to which people report and law enforcement agencies record crime. NCVS and UCR data can be used in concert to explore why trends in reported and police recorded crime may differ.
