

To whom it may concern,

1531 '02 FEB 12 P2:22
Genetic Engineering is relatively new and I am surprised that the FDA has not made food manufactures list this on food products we eat. Possibly 70% of American produce is already GE. There are side effects that have not been sufficiently explored, such as food allergies and effects on children. Attention Deficit Disorder has been attributed to some hormones/chemicals in food products. The public has a right to be informed, we already have plenty of new diseases that Doctors are unable to solve with advanced technology.

We have a right to decide what we put in our bodies and those of our offspring.

A very angry and concerned consumer,
